Reaction (B.2)

Reaction/event as reported by primary source (B.2.i.0) Current reaction

RECENTLY DIED TWO WEEKS AFTER HIS SECOND MODERNA JAB

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Death

MedDRA version for reaction/event term PT (B.2.i.2.a)	Reaction/event MedDRA term (PT) (B.2.i.2.b)
26.0	Death

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (recently died two weeks after his second Moderna jab) in a 40-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) (batch no. Unknown) for COVID-19 vaccination.

Concurrent medical conditions included Non-smoker.

On an unknown date, the patient received second dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

No treatment drug information provided.

No concomitant drug information provided.

Patient did not drink. Gender was not confirmed but patient referred to as his and he.

Very limited information regarding this event has been provided at this time. Further information has been requested if possible.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Very limited information regarding this event has been provided at this time. Further information has been requested if possible.

Test (B.3)

Test date (B.3.1b)	Test name (B.3.1c)	Test result (B.3.1d)

Unit (B.3.1e)	Normal low range (B.3.1.1)	Normal high range (B.3.1.2)	More info (B.3.1.3)

Results of tests and procedures (B.3.2)

Patient Medical History (B.1.7)

MedDRA version (B.1.7.1a.1)	Episode name (B.1.7.1a.2)
26.0	Non-smoker

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer via the regulatory authority in Canada (Health Canada) concerning a female patient of an unknown ethnic origin (age 55 years).

The patient's past and current medical history included period cramps (dates not reported) in past but not for a few years. The patient was generally healthy. The fibroid was pre-existing for thirty years.

No concomitant products were reported.

During 2021, the patient received first dose of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN) once/single administration, via intramuscular route, for infection prevention.

The report described off-label use for Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. The reported term was "astrazeneca covid 19 vaccine indicated for prophylaxis (off label use)".

On an unknown date, the patient experienced aphasia (preferred term: Aphasia), pulmonary embolism (preferred term: Pulmonary embolism), cerebral thrombosis (preferred term: Cerebral thrombosis), pulmonary infarction (preferred term: Pulmonary infarction), pain (preferred term: Pain), platelet count decreased (preferred term: Platelet count decreased), speech disorder (preferred term: Speech disorder), thrombosis (preferred term: Thrombosis), vomiting (preferred term: Vomiting), abdominal pain (preferred term: Abdominal pain), abnormal behaviour (preferred term: Abnormal behaviour), anxiety (preferred term: Anxiety), discoloured vomit (preferred term: Discoloured vomit), electric shock sensation (preferred term: Electric shock sensation), headache (preferred term: Headache), malaise (preferred term: Malaise), neurological symptom (preferred term: Neurological symptom), astrazeneca covid 19 vaccine indicated for prophylaxis (off label use) (Preferred term: Off label use). The reporter stated that twenty hours after the vaccine, developed severe headache, lightening bolts to brain. She self-treated herself with Advil, twenty-four hours post-vaccine, she developed abdominal pain like knives to abdomen. She was in pain and not acting like herself. The headache and abdominal pain continued for a number of days, she then thought she was better and she stopped taking Advil, however, she got worse. Twenty-four hours before death, she felt like she was going to vomit. Then she vomited for two hours and then felt unwell afterwards. Vomit was reddish in color and she thought it was from ketchup chips. She had clotting which led to death. The reporter stated that there were neurological signs before death like mumbling and loss of speech and there was a clot in her brain as well. The patient died before reaching the hospital. Post-mortem COVID-19 test was negative. There was a low platelet count in post-mortem blood test.

The action taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable.

During 2021, the patient died from the event of aphasia, pulmonary embolism, cerebral thrombosis, pulmonary infarction, pain, platelet count decreased, speech disorder, thrombosis, vomiting, abdominal pain, abnormal behaviour, anxiety, discoloured vomit, electric shock sensation, headache, malaise and neurological symptom. The outcome of the event of astrazeneca covid 19 vaccine indicated for prophylaxis (off label use) was unknown.

An autopsy was performed which showed lung infarcts and pulmonary embolism as well as a fibroid. No blood clot was found in brain. The cause of death was aphasia, pulmonary embolism, cerebral thrombosis, pulmonary infarction, pain, platelet count decreased, speech disorder, thrombosis, vomiting, abdominal pain, abnormal behavior, anxiety, discoloured vomit, electric shock sensation, headache, malaise and neurological symptom.

The reporter assessed the events of aphasia, pulmonary embolism, cerebral thrombosis, pulmonary infarction, pain, platelet count decreased, speech disorder, thrombosis, vomiting, abdominal pain, abnormal behaviour, anxiety, discoloured vomit, electric shock sensation, headache, malaise and neurological symptom as serious due to seriousness criterion of death. The reporter assessed the events of aphasia, pulmonary embolism, cerebral thrombosis, pulmonary infarction, pain, platelet count decreased, speech disorder, thrombosis, vomiting, abdominal pain, abnormal behaviour, anxiety, discoloured vomit, electric shock sensation, headache, malaise and neurological symptom as serious due to seriousness criterion of important medical event. The reporter assessed the event of astrazeneca covid 19 vaccine indicated for prophylaxis (off label use) as non-serious.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of follow-up information received by AstraZeneca/MedImmune 18-May-2022 from a consumer via spontaneous source: added reference reporter, added start date and indication for suspect, added relevant history period cramps and fibroids, added date of death and updated autopsy performed, added all lab tests. Narrative amended.CAUSE OF DEATH: APHASIA CAUSE OF DEATH: PULMONARY EMBOLISM CAUSE OF DEATH: CEREBRAL THROMBOSIS CAUSE OF DEATH: PULMONARY INFARCTION CAUSE OF DEATH: PAIN CAUSE OF DEATH: PLATELET COUNT DECREASED CAUSE OF DEATH: SPEECH DISORDER CAUSE OF DEATH: THROMBOSIS CAUSE OF DEATH: VOMITING CAUSE OF DEATH: ABDOMINAL PAIN CAUSE OF DEATH: ABNORMAL BEHAVIOUR CAUSE OF DEATH: ANXIETY CAUSE OF DEATH: DISCOLOURED VOMIT CAUSE OF DEATH: ELECTRIC SHOCK SENSATION CAUSE OF DEATH: HEADACHE CAUSE OF DEATH: MALAISE CAUSE OF DEATH: NEUROLOGICAL SYMPTOM Lab Test #1 : 10084356 Lab Test #2 : 10035525
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal events of aphasia, speech disorder, Vomiting, Abdominal pain, abnormal behavior, anxiety, discoloured vomit, electric shock sensation, Headache, Malaise and Neurological symptom are not listed in the company core data sheet of AZD1222.Thrombosis (PT: pulmonary embolism, Cerebral thrombosis, Pulmonary infarction, Thrombosis) in combination with thrombocytopenia (PT: platelet count decreased) are listed in the company core data sheet of AZD1222, however since they are reported with fatal outcome they become unlisted. The events aphasia and speech disorder could be associated with each other. The events thrombosis, cerebral thrombosis, pulmonary embolism and pulmonary infarction could be associated with each other. The events abnormal behavior, anxiety, electric shock sensation could be in association with each other. Cause of death is further specified as aphasia, pulmonary infarction, speech disorder, abnormal behavior, anxiety, discoloured vomit, electric shock sensation, neuroloogical symptom, thrombosis, cerebral thrombosis, pulmonary embolism, platelet count decreased, pain, vomiting, abdominal pain, headache, malaise. Due to limited information on circumstances leading to events, clinical course, other concurrent conditions, concomitant medications, other relevant medical and family history, specific risk factors (infection, neurological disorders, cardiac disorder, respiratory disorder, trauma, hypercholesterolemia, smoking),etiological and diagnostic workup (complete blood count, infection panel, liver function test, renal function test, lipid profile, imaging studies, clinical examination), the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a patient of unknown gender (age not provided) of Unknown ethnic origin.

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN) 0.5 ml, via intramuscular route, on an unknown date. On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia), thrombosis (preferred term: Thrombosis).

The action taken with Covid-19 Vaccine Astrazeneca (chadox1-s (viral Vector)) was Not Applicable. The outcome of the events was fatal.

The patient died from the event of thrombocytopenia and thrombosis on an unspecified date.
It was not known whether an autopsy was performed. The cause of death was thrombocytopenia and thrombosis.

The events were considered serious thrombocytopenia and thrombosis (death, hospitalized and important medical event).

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 vaccine is an Astrazeneca Canada Inc. product authorized under the Interim Order.
CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: THROMBOSIS
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Thrombosis in combination with Thrombocytopenia is listed in the company core data sheet of AZD1222. However, since the events were reported with a fatal outcome they are considered unlisted. Due to limited information on patients age and gender, family and medical history, concurrent conditions (heart disease, deep venous thrombosis, traumatic injury, neoplastic disease, thrombophilia, chronic obstructive pulmonary disease), concomitant medication, further clarification of the events, details of the location of the thrombosis, specific risk factors and lifestyle (prolonged immobilization, smoking habit), etiological and diagnostic work up (physical findings, complete blood analysis, including D dimer test, autoimmune profile, viral serologies, ECG, chest and brain imaging studies, echocardiography, Venous Doppler Ultrasound), details on interventions and treatment, biopsy result, the evaluation did not find evidence to suggest a causal relationship between the events and vaccine AZD12222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADA HEALTH AUTHORITY) via consumer concerning a patient of unknown gender, age and ethnic origin.

No medical history was reported. No concomitant products were reported.

The patient received AstraZeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5 ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN), via intramuscular route, on an unknown date. On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia).

Action taken with AstraZeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. The patient died from the event thrombocytopenia on an unspecified date.

It is not known whether an autopsy was performed. The cause of death was thrombocytopenia.

The reporter considered the event of thrombocytopenia serious due to seriousness criteria of death and important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.CAUSE OF DEATH: THROMBOCYTOPENIA
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case report concerns a patient of unknown age who presented thrombocytopenia with fatal outcome after vaccine AZD1222 administration. Cause of death was reported as thrombocytopenia. Due to limited information on patient?s demographics, platelet count before vaccination, relevant medical history, concomitant medication, comorbidities, event details including detailed description on circumstances leading to the event, baseline health condition before vaccination, family history, diagnostic and etiological workup (complete blood panel with infectious profile, viral panel test including human deficiency virus and hepatitis panel, abdominal ultrasound with spleen evaluation, blood cultures, platelet factor 4 antibodies), discussion on lifestyle, specific risk factors and etiological factors (viral infections, hemolytic uremic syndrome, medication, bacteremia, alcoholism, bone marrow disorders, anemia), report of laboratory tests performed (including exact dates, units and normal rangees), details on interventions and treatment, medical notes from a health care provider, the evaluation did not find evidence to suggest a causal relationship between the event and vaccine AZD1222.

Hi EFAX,

For DE please. Once data entered, can we please obtain an AER number for this report for Claire (CC here)?

Thanks,
Chris

Importance: High

Good morning,
Please see email below,
I spoke with this gentleman yesterday and I sent the link by email to report an AR to AstraZeneca vaccine (his wife died) and he requested:

1. Information of when (if) the AR was submitted by the coroner or doctor (I said that for private issues we cannot get access to that information but if he wasn't sure if was reported I said he could report too)
2. An ombudsman that could assist on his case (I said I'll send a request to my team leader)

Thank you,
Ausmar

Cc [redacted]
Subject: Re: Reporting a side effect to the Canada Vigilance Program

THIS IS THE WRONG FORM. I asked about reporting an adverse effect following immunization - a suspected vaccine related death following immunization. The form

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

required is AEFI Adverse Effects Following Immunization.

I am trying to follow your web site instructions.

This case does not qualify under the heath product category you responded with below.

Please send appropriate form as you promised. I will then fill out as you advised for an adverse event Death linked or suspected to AstraZeneca-Oxford Covid-19 immunization.

So frustrated.

I advised by telephone message, and in our conversation both yesterday, that the MANDATORY (must) submittal of the form is an issue and is in question with our local body. My initial and MAIN request was confirmation of date and time that any such form was submitted - confirmation of if and when - This submitt date is secret and has become a nightmare with the local health region [redacted] via the local coroner's office. Confirmation of this date and time is still requested.

You advisd that the time and date can not be provided. But a duplicate AEFI form can be filled out by me with help from Health Canada Vigilence over the phone if necessary; the two reported forms can then be "merged" you said. Please send me the form,

ALSO I specifically asked in telephone message and to you on your return call for an OMBUDSMAN that could assist. You stated you would speak to supervisor and would reply. Please include that information with the form.

We expect clarity and transparency.

Reporting was to be expedient and timely to the national system.

No cover--up or secret agreements are acceptable on matters of timely national health importance.

I would prefer never to have questioned the integrity of the system - I read directly on your web site that the form must be submitted by a health professional only. You said not true.

Sorry for the long story - this is holding up burial of the deceased. A date and time to confirm job was done and vigilance system notified at time requested, on behalf of family should not be SECRET.

Please reply immediately.

Sincerely,

[redacted]

Subject: Reporting a side effect to the Canada Vigilance Program

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Greetings,

Thank you for your inquiry to report an adverse reaction on May 11, 2021.

Please find attached, as requested, a side effect reporting form.

Side effects suspected to be associated with a health product are important to Health Canada's post-market surveillance program, which monitors the safety profile of health products and ensures that the benefits of the products continue to outweigh the risks.

Completing a side effect reporting form is an effective way to record the suspected side effect, and provides the information that Health Canada needs to further assess the reaction.

Reporting a side effect to the Canada Vigilance Program can be done by one of the following ways:

- Report online at https://hpr-rps.hres.ca/side-effects-reporting-form.php?form=voluntary&lang=en
- Call toll free at 1-866-234-2345
- Complete a Canada Vigilance Reporting Form and:
  - Fax to 1-866-678-6789
  - Mail to: Health Canada
    Marketed Health Products Directorate
    Canada Vigilance Program
    Postal Locator 1908C
    Ottawa, Ontario K1A 0K9

Postage paid labels, the side effect reporting form and reporting guidelines are available at: www.health.gc.ca/medeffect.

We look forward to receiving your completed side effect reporting form. Should you have any other questions related to the reporting of side effects, or the Canada Vigilance Program, please do not hesitate to contact us.

Your contribution and commitment to health product safety monitoring are appreciated.

Kind Sirs/Madam,

This report below was populated and submitted without my knowledge, it may not be incorrect (have not checked it fully) BUT it is specifically and directly the WRONG form.

The AEFI - Adverse Event Following Immunization form is required to be submitted NOT the form applicable to health products as defined (Drugs, health products, therapeutics) versus separate form completely for vaccines.

This is critical. Timely action is mandatory..

Please assist IMMEDIATELY with correct AEFI form.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

See attached PDF or email yesterday for original info and the two additional formal requests not yet covered.

Also, product name must have the "AstraZeneca" portion of the name in its title - this is not a generic vaccine.

Sincerely,

[redacted]

Thank you for submitting an adverse reaction report to the Canada Vigilance Program. Your experience with marketed health products is important to us and we appreciate the time you took to report.

The information that you included in your report has been recorded in the Canada Vigilance Program database as follows:

Adverse Reaction Number: LRN-20210512-1302 0.0
Health Product Name (as reported): COVID-19 VACCINE
Please reference the above Adverse Reaction Number should you wish to report additional information on this event. Please note that Health Canada will contact you about your report only if additional information is required for its surveillance activities.

Please do not respond to this email. This account is not monitored. Please contact hc.canada.vigilance.sc@canada.ca with any questions or concerns.

The Canada Vigilance Program is Health Canada's post-market surveillance program that collects and assesses reports of suspected adverse reactions to health products that have been submitted by manufacturers, by hospitals, or by health professionals and consumers either directly to Health Canada or via the manufacturers.

The information from adverse reaction reports as well as information from other sources of data is used to determine whether the benefits of a given health product continue to outweigh its risks and to take appropriate action to minimize any new risks. Such actions may include the update of the label of a health product in its authorized Canadian monograph, risk communication(s) to inform Canadians about possible new adverse reactions and/or a recall of the product.

For information on health products authorized for sale in Canada, you may wish to consult the following:

- Drug Product Database: https://health-products.canada.ca/dpd-bdpp/index-eng.jsp
- Licensed Natural Health Products Database: https://www.canada.ca/en/health-canada/services/drugs-health-products/natural-non-prescription/applications-submissions/product-licensing/licensed-natural-health-products-database.html
- Canada Vigilance Adverse Reaction Online Database: https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada/adverse-reaction-database.html
- Advisories, recalls and other communication on health products: https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada/stay-informed-medeffect-canada.html

We would like to thank you once again for your report, as your contribution and commitment to health product safety monitoring are appreciated.

Sincerely,

Canada Vigilance Program

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Cher / Chère [redacted]

Nous vous remercions d'avoir déclaré un effet indésirable au Programme Canada Vigilance. Votre expérience en lien avec les produits de santé commercialisés est une source d'information importante pour nous en matière d'innocuité, et nous vous remercions du temps que vous avez pris pour présenter cette déclaration.

Les renseignements que vous avez inclus dans votre déclaration ont été consignés dans la base de données du Programme Canada Vigilance comme suit :

Numéro de l'effet indésirable: LRN-20210512-1302 0.0

Nom du produit de santé (tel que déclaré): COVID-19 VACCINE

Veuillez indiquer le numéro d'effet indésirable ci-dessus si vous souhaitez fournir des renseignements supplémentaires sur cet événement. Veuillez noter que Santé Canada communiquera avec vous au sujet de votre déclaration seulement si des renseignements supplémentaires sont requis pour ses activités de surveillance.

Veuillez ne pas répondre à ce courriel. Ce compte n'est pas surveillé. Veuillez communiquer avec hc.canada.vigilance.sc@canada.ca pour toute question ou préoccupation.

Le Programme Canada Vigilance est le programme de surveillance après la mise en marché de Santé Canada qui recueille et évalue les déclarations d'effets indésirables présumés associés aux produits de santé soumises par des fabricants, des hôpitaux, des professionnels de la santé et des consommateurs directement à Santé Canada ou par l'entremise des fabricants.

Les renseignements tirés des déclarations d'effets indésirables et d'autres sources de données servent à déterminer si les avantages d'un produit de santé donné continuent de l'emporter sur ses risques et à prendre les mesures appropriées pour minimiser les nouveaux risques. Ces mesures peuvent comprendre la mise à jour de l'étiquette d'un produit de santé dans sa monographie canadienne autorisée, la communication des risques pour informer les Canadiens au sujet des nouveaux effets indésirables possibles et/ou le retrait du produit.

Pour obtenir des renseignements sur les produits de santé dont la vente est autorisée au Canada, vous pouvez consulter les pages Web suivantes :

- Base de données sur les produits pharmaceutiques: https://www.canada.ca/fr/sante-canada/services/medicaments-produits-sante/medicaments/base-donnees-produits-pharmaceutiques.html

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Verbal report taken by RC Claire- note the husband feels that the coroner and [redacted] is putting incorrect info in his mouth and trying to sweep this under the rug and he wants someone from the government to enforce mandatory reporting/confirm receipt of report(likely went to PHAC?). I have flagged this higher and given him contact info for the food and drug liasion office/ombudsman as requested. He may have more info if needed, he mentioned he had lists of her symptoms from family members(though he was present the whole time), but he wanted answers on transparency and "vigilance" from CV/PHAC so may not want to discuss further without answers to those concerns.

Reaction 1

Outcome: Died

Reaction Start Date: 2021[redacted]

Reaction End Date:

Reaction Description: 20 hours after the vaccine, developed severe headache"" lightning bolts to brain"", self-treated with advil, 24 hours post-vaccine developed abdominal pain ""like knives to abdomen."" She was in pain and not acting like herself, swearing, said "" give me the damn (advil) bottle, how many of these can I take in a day?"" This headache/abdominal pain continued for a number of days, she then thought she was better and stopped taking the advil and then got way worse. 24 hours before death began feeling like she was going to vomit, vomited for 2 hours and then felt unwell afterwards. Vomit was a reddish colour and she thought it was from ketchup chips, now husband thinks it was not. Anxiety. Clotting leading to death as per her husband. He thinks there were neurological signs before death(mumbling and loss of speech) and that there was a clot in her brain as well. She died before reaching the hospital. Post-mortem COVID test was negative. There was a low platelet count in post-mortem bloodtest, and on autopsy they found lung infarcts and pulmonary embolism as well as a fibroid, the fibroid was pre-existing X 30 years according to husband. no blood clot in brain found on autopsy.

ATIA - 19(1)

Dear [redacted]

Thank you for speaking with representatives, including our Senior Executive Director, Sophie Sommerer, from the Marketed Health Products Directorate of Health Canada on May 11, 13 and 14, 2021, regarding the tragic event that your wife experienced. We would like to extend our deepest sympathy to you and your family for her loss and imagine the pain this matter might bring to you.

The information that you provided via phone and email has been recorded in the Canada Vigilance Program (CVP) database and assigned the Adverse Reaction Report (AER) Number, **000949763**. As requested, please attached documents that present the information that Health Canada used to create this report. Please note that some of the information is not shown in the online submission form due to the sizes of the text. As such, this information is attached in a separate document entitled "supplementary information."

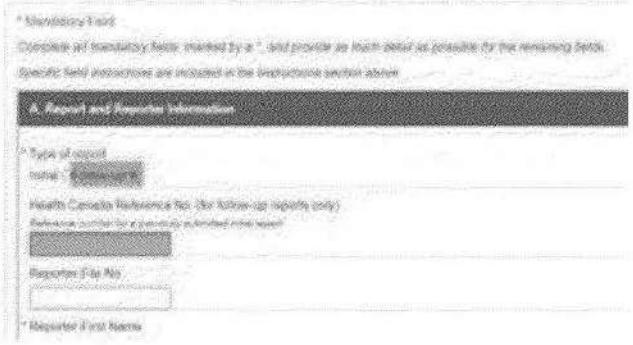
You indicated that you may have additional information on the symptoms your wife experienced. We would invite you to add any additional information that you may have access to, in particular:

- Your wife's height and weight
- The dose and lot number of the vaccine, if known
- Any further information about the symptoms experienced
- Further information from the autopsy or coroner's report if available

In addition, if you find that any of the information included in the report is incorrect, please also indicate that in your follow-up report. For example, "Delete X-incorrect" or "Change Y to Z."

You can provide follow-up information by using the online side effect reporting application. Alternatively, you can email hc.canada.vigilance.sk.sc@canada.ca to let us know the best time and dates to connect with you via phone if you prefer to report verbally.

For online reporting, select the "follow-up" radio button and enter the AER **[000949763]** in the "Health Canada reference no." field as shown below, or notify the coordinator that this a follow-up of the referenced AER number for follow-up by phone.



We greatly appreciate your feedback to ensure that we have the most accurate and comprehensive information.

Thank you again very much for taking the time to speak with us during this difficult time.

Sincerely,

Patient autopsy (B.1.9.4)

MedDRA version for autopsy-determined cause(s) of death (B.1.9.4a)	Autopsy-determined cause(s) of death (B.1.9.4b)

Drug (B.4)

Drug characterization (B.4.k.1)	Medicinal product name (B.4.k.2.1)	
Suspect	VAXZEVRIA VIAL CONTAINS 10 DOSES OF 0.5ML	
Active Substance names (B.4.k.2.2)		
chadox1-s [recombinant]		
Country drug obtained (B.4.k.2.3)	**Batch/lot no. (B.4.k.3)**	
	Unknown	
Holder and authorization/application no. of drug (B.4.k.4)		
Authorization/Application no.: 02510847 Country of authorization/application: Canada		
Structured dosage info (B.4.k.5)		
Dosage text (B.4.k.6)		
Dose Unknown ONCE/SINGLE ADMINISTRATION		
Pharmaceutical form (B.4.k.7)	**Route of administration (B.4.k.8)**	**Parent route of admin (B.4.k.9)**
	Intramuscular	
Gestation period (B.4.k.10)	**MedDRA version (B.4.k.11a)**	**Indication (B.4.k.11b)**
	26.0	COVID-19 prophylaxis
Start date of drug (B.4.k.12)	**Drug end date (B.4.k.14)**	
Start period (B.4.k.13.1)	**Last period (B.4.k.13.2)**	**Duration of drug Admin (B. 4.k.15)**
Action(s) taken with drug (B.4.k.16)	**Did reaction recur on readministration? (B.4.k.17.1)**	
Unknown		
Additional info (B.4.k.19)		
Drug Recurrence (B.4.k.17)		
MedDRA version (B.4.k.17.2a)	**Which reaction(s)/event(s) recurred? (B.4.k.17.2b)**	
Drug Reaction relatedness (B.4.k.18)		
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Drug characterization (B.4.k.1) Concomitant	Medicinal product name (B.4.k.2.1) METFORMIN/SITAGLIPTIN E	
Active Substance names (B.4.k.2.2) METFORMIN SITAGLIPTIN		
Country drug obtained (B.4.k.2.3)	Batch/lot no. (B.4.k.3)	
Holder and authorization/application no. of drug (B.4.k.4)		
Structured dosage info (B.4.k.5)		
Dosage text (B.4.k.6) ONCE/SINGLE ADMINISTRATION		
Pharmaceutical form (B.4.k.7)	Route of administration (B.4.k.8) Unknown	Parent route of admin (B.4.k.9)

Source of assessment (B.4.k.18.2)	Method of assessment (B.4.k.18.3)	Result (B.4.k.18.4)

Reaction (B.2)

Reaction/event as reported by primary source (B.2.i.0) Current reaction

CEREBRAL VENOUS THROMBOSIS

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Cerebral venous thrombosis		
MedDRA version for reaction/event term PT (B.2.i.2.a)	Reaction/event MedDRA term (PT) (B.2.i.2.b)		
26.0	Cerebral venous thrombosis		
Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			5 Days
Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

CEREBROVASCULAR ACCIDENT

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Cerebrovascular accident
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Cerebrovascular accident

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

COAGULOPATHY

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Coagulopathy
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Coagulopathy

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

IMMUNE THROMBOCYTOPENIA

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Immune thrombocytopenia
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Immune thrombocytopenia

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

THROMBECTOMY

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Thrombectomy
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Thrombectomy

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

VOMITING

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Vomiting
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Vomiting

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

DECOMPRESSIVE CRANIECTOMY

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Decompressive craniectomy		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Decompressive craniectomy		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

CEREBRAL HAEMORRHAGE

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Cerebral haemorrhage		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Cerebral haemorrhage		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

PLATELET TRANSFUSION

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Platelet transfusion		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Platelet transfusion		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

VENOUS HYPERTENSION

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Venous hypertension		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Venous hypertension		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

VISION BLURRED

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Vision blurred
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)
26.0	Vision blurred

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

HEADACHE

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Headache
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Headache

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

NAUSEA

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Nausea
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Nausea

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

FATIGUE

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Fatigue
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Fatigue

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

HAEMORRHAGE INTRACRANIAL

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)
26.0	Haemorrhage intracranial
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT) (B.2.i.2.b)**
26.0	Haemorrhage intracranial

Term hightlighted by the reporter? (B.2.i.3)	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)
No			

Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8)
		Fatal

Reaction/event as reported by primary source (B.2.i.0) Current reaction

THROMBOSIS WITH THROMBOCYTOPENIA SYNDROME

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

26.0	Thrombosis with thrombocytopenia syndrome			
MedDRA version for reaction/event term PT (B.2.i.2.a) 26.0	Reaction/event MedDRA term (PT) (B.2.i.2.b) Thrombosis with thrombocytopenia syndrome			
Term hightlighted by the reporter? (B.2.i.3) No	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)	
Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8) Fatal		

Reaction/event as reported by primary source (B.2.i.0) Current reaction

FEEDING DISORDER

MedDRA version for reaction/event term LLT (B.2.i.1.a) 26.0	Reaction/event MedDRA term(LLT) (B.2.i.1.b) Feeding disorder			
MedDRA version for reaction/event term PT (B.2.i.2.a) 26.0	Reaction/event MedDRA term (PT) (B.2.i.2.b) Feeding disorder			
Term hightlighted by the reporter? (B.2.i.3) No	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)	
Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8) Fatal		

Reaction/event as reported by primary source (B.2.i.0) Current reaction

CEREBRAL VENOUS SINUS THROMBOSIS

MedDRA version for reaction/event term LLT (B.2.i.1.a) 26.0	Reaction/event MedDRA term(LLT) (B.2.i.1.b) Cerebral venous sinus thrombosis			
MedDRA version for reaction/event term PT (B.2.i.2.a) 26.0	Reaction/event MedDRA term (PT) (B.2.i.2.b) Cerebral venous sinus thrombosis			
Term hightlighted by the reporter? (B.2.i.3) No	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)	
Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8) Fatal		

Reaction/event as reported by primary source (B.2.i.0) Current reaction

APHASIA

MedDRA version for reaction/event term LLT (B.2.i.1.a) 26.0	Reaction/event MedDRA term(LLT) (B.2.i.1.b) Aphasia			
MedDRA version for reaction/event term PT (B.2.i.2.a) 26.0	Reaction/event MedDRA term (PT) (B.2.i.2.b) Aphasia			
Term hightlighted by the reporter? (B.2.i.3) No	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)	
Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8) Fatal		

Reaction/event as reported by primary source (B.2.i.0) Current reaction

CONFUSIONAL STATE

MedDRA version for reaction/event term LLT (B.2.i.1.a) 26.0	Reaction/event MedDRA term(LLT) (B.2.i.1.b) Confusional state			
MedDRA version for reaction/event term PT (B.2.i.2.a) 26.0	Reaction/event MedDRA term (PT) (B.2.i.2.b) Confusional state			
Term hightlighted by the reporter? (B.2.i.3) No	Start Date (B.2.i.4)	End Date (B.2.i.5)	Duration (B.2.i.6)	
Reaction first time (B.2.i.7.1)	Reaction last time (B.2.i.7.2)	Outcome (B.2.i.8) Fatal		

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Reaction/event as reported by primary source (B.2.i.0) Current reaction

HYPERTENSION

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Hypertension		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Hypertension		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

HYPERGLYCAEMIA

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Hyperglycaemia		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Hyperglycaemia		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

MUSCULAR WEAKNESS

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Muscular weakness		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Muscular weakness		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

INTRACRANIAL PRESSURE INCREASED

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Intracranial pressure increased		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)		
26.0	Intracranial pressure increased		
Term hightlighted by the reporter? (B.2.i.3)	**Start Date** (B.2.i.4)	**End Date** (B.2.i.5)	**Duration** (B.2.i.6)
No			
Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Reaction/event as reported by primary source (B.2.i.0) Current reaction

SUBARACHNOID HAEMORRHAGE

MedDRA version for reaction/event term LLT (B.2.i.1.a)	Reaction/event MedDRA term(LLT) (B.2.i.1.b)		
26.0	Subarachnoid haemorrhage		
MedDRA version for reaction/event term PT (B.2.i.2.a)	**Reaction/event MedDRA term (PT)** (B.2.i.2.b)

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a health professional via the regulatory authority in Canada concerning a female patient of unknown ethnic origin of age 54 years, height 160 cm and weight 68 kg.

No medical history was reported.

Concomitant medication included metformin, sitagliptin and paracetamol.

On an unknown date, the patient received Covid-19 Vaccine Astrazeneca (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown) once/single administration, via intramuscular route, for covid-19 prophylaxis.

On an unknown date, the patient experienced cerebral venous thrombosis (preferred term: Cerebral venous thrombosis), cerebrovascular accident (preferred term: Cerebrovascular accident), coagulopathy (preferred term: Coagulopathy), immune thrombocytopenia (preferred term: Immune thrombocytopenia), thrombectomy (preferred term: Thrombectomy), vomiting (preferred term: Vomiting), decompressive craniectomy (preferred term: Decompressive craniectomy), cerebral haemorrhage (preferred term: Cerebral haemorrhage), platelet transfusion (preferred term: Platelet transfusion), venous hypertension (preferred term: Venous hypertension), vision blurred (preferred term: Vision blurred), headache (preferred term: Headache), nausea (preferred term: Nausea), fatigue (preferred term: Fatigue), haemorrhage intracranial (preferred term: Haemorrhage intracranial), thrombosis with thrombocytopenia syndrome (preferred term: Thrombosis with thrombocytopenia syndrome), feeding disorder (preferred term: Feeding disorder), cerebral venous sinus thrombosis (preferred term: Cerebral venous sinus thrombosis), aphasia (preferred term: Aphasia), confusional state (preferred term: Confusional state), hypertension (preferred term: Hypertension), hyperglycaemia (preferred term: Hyperglycaemia), muscular weakness (preferred term: Muscular weakness), intracranial pressure increased (preferred term: Intracranial pressure increased), subarachnoid haemorrhage (preferred term: Subarachnoid haemorrhage) and neurological decompensation (preferred term: Neurological decompensation).

It was unknown if any action was taken with Covid-19 Vaccine Astrazeneca.

On an unspecified date, the patient died from the event of cerebral venous thrombosis, cerebrovascular accident, coagulopathy, immune thrombocytopenia, thrombectomy, vomiting, decompressive craniectomy, cerebral haemorrhage, platelet transfusion, venous hypertension, vision blurred, headache, nausea, fatigue, haemorrhage intracranial, thrombosis with thrombocytopenia syndrome, feeding disorder, cerebral venous sinus thrombosis, aphasia, confusional state, hypertension, hyperglycaemia, muscular weakness, intracranial pressure increased, subarachnoid haemorrhage and neurological decompensation.

The cause of death was cerebral venous thrombosis, cerebrovascular accident, coagulopathy, immune thrombocytopenia, thrombectomy, vomiting, decompressive craniectomy, cerebral haemorrhage, platelet transfusion, venous hypertension, vision blurred, headache, nausea, fatigue, haemorrhage intracranial, thrombosis with thrombocytopenia syndrome, feeding disorder, cerebral venous sinus thrombosis, aphasia, confusional state, hypertension, hyperglycaemia, muscular weakness, intracranial pressure increased, subarachnoid haemorrhage and neurological decompensation.

The reporter considered the events of cerebral venous thrombosis, cerebrovascular accident, coagulopathy, immune thrombocytopenia, thrombectomy, vomiting, decompressive craniectomy, cerebral haemorrhage, platelet transfusion, venous hypertension, vision blurred, headache, nausea, fatigue, haemorrhage intracranial, thrombosis with thrombocytopenia syndrome, feeding disorder, cerebral venous sinus thrombosis, aphasia, confusional state, hypertension, hyperglycaemia, muscular weakness, intracranial pressure increased, subarachnoid haemorrhage and neurological decompensation as serious due to seriousness criteria of death.
The reporter considered the events of cerebral venous thrombosis, cerebrovascular accident, immune thrombocytopenia and cerebral haemorrhage were considered serious due to seriousness criteria of important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 vaccine is an AstraZeneca Canada inc product authorized under the interim order.

Summary of follow-up information received by AstraZeneca/MedImmune 29-Mar-2022 from health professional via spontaneous source: New primary reporter health professional added. New events including Haemorrhage intracranial, Thrombosis with thrombocytopenia syndrome, Feeding disorder, Cerebral venous sinus thrombosis, Aphasia,

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Thrombocytopenia syndrome, Feeding disorder, Cerebral venous sinus thrombosis, Aphasia, Confusional state, Hypertension, Hyperglycaemia, Muscular weakness, Intracranial pressure increased, Subarachnoid haemorrhage and Neurological decompensation.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case concerns a 54-year-old female vaccinee with reported 26 fatal serious adverse events. Thrombosis (PT: Cerebral venous thrombosis, Cerebrovascular accident, Thrombectomy) in combination with thrombocytopenia (PT: Immune thrombocytopenia) is listed in the company core data sheet of AZD1222. However, as the events (PTs: Cerebral venous thrombosis, Cerebrovascular accident, Thrombectomy, Immune thrombocytopenia) were reported with seriousness criteria of death, the combination is considered unlisted. Vomiting, Headache, Nausea and Fatigue are listed in the company core data sheet of AZD1222. However as they were reported with seriousness criteria of death, these events are considered as unlisted. The cause of death reported are all 26 serious events. Concomitant medication metformin and sitagliptin could be considered as confounding factors for Vomiting, Nausea, headache and Fatigue. All the reported events could be in association with each other. Due to limited information on baaseline health condition before vaccination, relevant medical and family history, date of vaccination, event onset and death dates, details and circumstances surrounding the events, possible risk factors (diabetes, cardiovascular disorders, neurological disorders, infection) and detailed diagnostic and etiologic workup (physical examination, neurological findings, complete blood count, blood laboratory tests, coagulation studies, infection profile, electrocardiogram, echocardiogram, chest radiological studies and imaging and abdominal ultrasound/radiological imaging), autopsy report with confirmed final diagnosis, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Case level outcome :Fatal

A spontaneous report has been received from a health professional via the regulatory authority in Canada concerning a female patient of unknown ethnic origin of age 54 years, height 160 cm and weight 68 kg.

No medical history was reported.

Concomitant medication included metformin, sitagliptin and paracetamol.

On an unknown date, the patient received Covid-19 Vaccine Astrazeneca (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown) once/single administration, via intramuscular route, for covid-19 prophylaxis.

On an unknown date, the patient experienced cerebral venous thrombosis (preferred term: Cerebral venous thrombosis), cerebrovascular accident (preferred term: Cerebrovascular accident), coagulopathy (preferred term: Coagulopathy), immune thrombocytopenia (preferred term: Immune thrombocytopenia), thrombectomy (preferred term: Thrombectomy), vomiting (preferred term: Vomiting), decompressive craniectomy (preferred term: Decompressive craniectomy), cerebral haemorrhage (preferred term: Cerebral haemorrhage), platelet transfusion (preferred term: Platelet transfusion), venous hypertension (preferred term: Venous hypertension), vision blurred (preferred term: Vision blurred), headache (preferred term: Headache), nausea (preferred term: Nausea), fatigue (preferred term: Fatigue), haemorrhage intracranial (preferred term: Haemorrhage intracranial), thrombosis with thrombocytopenia syndrome (preferred term: Thrombosis with thrombocytopenia syndrome), feeding disorder (preferred term: Feeding disorder), cerebral venous sinus thrombosis (preferred term: Cerebral venous sinus thrombosis), aphasia (preferred term: Aphasia), confusional state (preferred term: Confusional state), hypertension (preferred term: Hypertension), hyperglycaemia (preferred term: Hyperglycaemia), muscular weakness (preferred term: Muscular weakness), intracranial pressure increased (preferred term: Intracranial pressure increased), subarachnoid haemorrhage (preferred term: Subarachnoid haemorrhage) and neurological decompensation (preferred term: Neurological decompensation).

It was unknown if any action was taken with Covid-19 Vaccine Astrazeneca.

On an unspecified date, the patient died from the event of cerebral venous thrombosis, cerebrovascular accident, coagulopathy, immune thrombocytopenia, thrombectomy, vomiting, decompressive craniectomy, cerebral haemorrhage, platelet transfusion, venous hypertension, vision blurred, headache, nausea, fatigue, haemorrhage intracranial, thrombosis with thrombocytopenia syndrome, feeding disorder, cerebral venous sinus thrombosis, aphasia, confusional state, hypertension, hyperglycaemia, muscular weakness, intracranial pressure increased, subarachnoid haemorrhage and neurological decompensation.

The cause of death was cerebral venous thrombosis, cerebrovascular accident, coagulopathy, immune thrombocytopenia, thrombectomy, vomiting, decompressive craniectomy, cerebral haemorrhage, platelet transfusion, venous hypertension, vision blurred, headache, nausea, fatigue, haemorrhage intracranial, thrombosis with thrombocytopenia syndrome, feeding disorder, cerebral venous sinus thrombosis, aphasia, confusional state, hypertension, hyperglycaemia, muscular weakness, intracranial pressure increased, subarachnoid haemorrhage and neurological decompensation.

The reporter considered the events of cerebral venous thrombosis, cerebrovascular accident, coagulopathy, immune thrombocytopenia, thrombectomy, vomiting, decompressive craniectomy, cerebral haemorrhage, platelet transfusion, venous hypertension, vision blurred, headache, nausea, fatigue, haemorrhage intracranial, thrombosis with thrombocytopenia syndrome, feeding disorder, cerebral venous sinus thrombosis, aphasia, confusional state, hypertension, hyperglycaemia, muscular weakness, intracranial pressure increased, subarachnoid haemorrhage and neurological decompensation as serious due to seriousness criteria of death. The reporter considered the events of cerebral venous thrombosis, cerebrovascular accident, immune thrombocytopenia and cerebral haemorrhage were considered serious due to seriousness criteria of important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Company Remarks (Sender's comments) (Cont...)

company core data sheet of AZD1222. However as they were reported with seriousness criteria of death, these events are considered as unlisted. The cause of death reported are all 26 serious events. Concomitant medication metformin and sitagliptin could be considered as confounding factors for Vomiting, Nausea, headache and Fatigue. All the reported events could be in association with each other. Due to limited information on baseline health condition before vaccination, relevant medical and family history, date of vaccination, event onset and death dates, details and circumstances surrounding the events, possible risk factors (diabetes, cardiovascular disorders, neurological disorders, infection) and detailed diagnostic and etiologic workup (physical examination, neurological findings, complete blood count, blood laboratory tests, coagulation studies, infection profile, electrocardiogram, echocardiogram, chest radiological studies and imaging and abdominal ultrasound/radiological imaging), autopsy report with confirmed final diagnosis, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer. A 19-year-old female patient received BNT162B2, via an unspecified route of administration on an unspecified date (Batch/Lot number was not reported) as dose number unknown, single for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient died the next morning after getting the vaccine after jogging on an unspecified date. Caller stated the vaccine is causing death, permanent disability, blindness, heart attacks, strokes, and blood clots being the number 1 thing. The patient died on an unspecified date. It was unknown if an autopsy was performed. The outcome of the event was fatal.

The following information on the lot/batch number has been requested.

Follow-up (08Nov2020): This follow-up is being submitted to notify that the batch/lot number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from the Pfizer Sponsored Program Pfizer.com - General Company Information, received from a contactable consumer. A 16-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date as single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient died five days after he took the vaccine. The outcome of the event was fatal. The patient died on an unspecified date. It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (19 year old woman got the Moderna vaccine in and died the next day.) in a 19-year-old female patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) (batch no. Unknown) for COVID-19 vaccination.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

No relevant concomitant and treatment medications were reported.

This case concerns a 19 year-old female patient with no details on past medical history, with unexpected events reported of Death which was happed one day after the administration of Moderna Vaccine (date of vaccination not reported including the dose number). The reported cause is unknown including if an autopsy was done. The benefit risk relationship of Moderna vaccine is not affected by this report.

This case was linked to MOD-2021-319899 (Patient Link).

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (patient's husband). A 35-year-old female patient received BNT162B2 (COMIRNATY, lot number F 7206 (missing letter, reporter will try to find the complete lot number)), via an unspecified route of administration on [redacted]2021 (at the age of 35-year-old) as dose 2, single for COVID-19 immunisation. The patient's medical history was reported as no prior conditions or low immune system. It was also reported that the patient was healthy and lived a regular life. Concomitant medications were not reported. The patient received the first dose of COMIRNATY (lot number: EW0221) on [redacted]021 (at the age of 35-year-old) for COVID-19 Immunization and experienced mild symptoms (headache and weakness). The reporter stated that on [redacted]2021, the patient missed her period 6-7 weeks post-vaccination which in the 14 years he's known her had never happened. On [redacted]2021 the patient started to experience jaundice. Her eyes and skin turned yellow. Her legs were very swollen. It felt like she was hit by a truck. She went to her Dr. for some blood tests. Her white blood cell count was very high, she developed a UTI (urinary tract infection), her liver was inflamed and her kidney failing in 2021. Her liver had doubled in size due to inflammation in such a short time, clarifying her liver went from the size of a baseball to the size of a football in 2021. She was treated as an alcoholic, but she kept telling them she was not an alcoholic. She may occasionally have wine on the weekends. Her doctors said that her liver was inflamed, and she had been given steroids, but nothing happened she wasn't responding to steroid therapy. She went into the hospital at 130lbs, she's now 160-165lbs in 2021. Reporter's wife was dying in the hospital. She was waiting to get a liver transplant. Her legs were inflamed and she could not even walk. She was admitted to the hospital in 2021 and was now in hospice care, she was not expected to make a recovery and will die according to the doctors. As per her husband, her kidney had failed and her liver was "fried". The husband wanted to know if there had been other reports of liver failure after receiving the vaccine. The doctors said she only had hours to days to live and putting her in palliative care. The doctor did not ask if she had a low immune system prior, and if she did, he would've recommended only getting one dose of the COVID vaccine. She used to run a kilometer a day, run his business. He didn't know how her liver could be fried after being so healthy. As of [redacted]021, it was reported that the patient passed away. Event unbalanced blood work (unspecified date) that was done at her physician's office required hospitalization. Yellow eyes required physician visit. Reporter stated that when the patient woke up one morning with yellow eyes, he took her to his family physician that prescribed blood work. The results were very alarming. His family physician sent her family physician a request to see patient urgently. Her family physician only saw her 2 weeks later and sent her to the Emergency Room (ER) right away. Reporter will be sending lab work and hospital summary. The outcome of events her liver had doubled in size due to inflammation in such a short time, her kidney failing, liver failure was fatal, outcome of events unbalanced blood work was unknown, the outcome of the other events was not recovered. The patient died on an unspecified date in 2021. It was unknown if an autopsy was performed.

The lot number for BNT162b2 was not provided and will be requested during follow up.

Follow-up [redacted]021): New information from the same contactable consumer includes: suspect vaccination details (second dose reported as suspect), first vaccine dose details, medical history, events clinical course details, lab data.

Follow-up [redacted]021): This is a follow-up report combining information from duplicate reports 202101294913 and 202101275114. The current and all subsequent follow-up information will be reported under manufacturer report number 202101275114. The new information reported from a patient's husband includes new events "Liver failure" and "She went into the hospital at 130 pounds (lbs), she's now 160-165lbs." added and event details (outcome, onset date for event "She missed her period 6-7 weeks post-vaccination").

Follow-up [redacted]021): New information received from the same contactable consumer (patient's husband) includes: patient data (death information and lab data added, historical vaccine date updated), event data (new event unbalanced blood work added), and clinical details.

Follow-up attempts are completed. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (patient's wife friend). A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number was not reported), via an unspecified route of administration on an unspecified date in 2021 as dose 2, single for covid-19 immunsation. The patient's medical history and concomitant medications were not reported. The reporter complained that how there was no informing "a lot of people died from the Pfizer Covid Vaccine. They were not getting the materials safety data sheet. It's a lie. A lot of people have died. They died, millions of them died from the Covid vaccine. It will cause infertility, cancer and ultimately death. It's not saving lives, it's making people sick. In line with this, the reporter's friend just called and told the reporter that the friend's husband past away 2 weeks ago [redacted]021). The patient got sick from his 2nd dose of Pfizer COVID-19 Vaccine, and he died. The patient got the vaccine 2 or 3 months ago. The patient died in [redacted]021. Cause of death was unknown. The outcome of sick was unknown; outcome of past away was fatal. It was unknown if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

Patient received 1st dose of AstraZeneca Vaccine o[redacted], then started having headache and fatigue on[redacted] The symptoms worsened over the following days and on[redacted] she started having nausea, vomiting and blurred vision. She went to ER on[redacted] and was quickly transferred to[redacted] on[redacted] due to a cerebral sinus venous thrombosis secondary to suspected VIPIT (Vaccine Induced Prothrombotic Immune Thrombocytopenia). Patient was started on IVIG and Argatroban. She deteriorated neurologically presumably due to venous hypertension and was started on hypertonic medication and underwent a venous thrombectomy. Patient transiently improved post procedure but unfortunately had a large left hemispheric hemorrhage in the context of severe thrombocytopenia (9000) + Argatroban. She received platelet transfusion urgently and underwent a bilateral decompressive craniectomy on[redacted] Unfortunately, she did not improve neurologically after this and after discussion with her family, life supportive measures were withdrawn and patient passed away shortly after on[redacted]

Reaction 1
Outcome: Died
Reaction Start Date: 2021[redacted]
Reaction End Date: 202[redacted]
Reaction Description: Severe and multiple cerebral sinus venous thrombosis secondary to VIPIT (see additional description below), caused AVC and bleeding due to coagulopathy/severe thrombocytopenia (platelet < 10 000)

Suspect Product 1
DIN #/NPN #: 02510847
UPHN #:
Brand Name: AstraZeneca COVID-19 Vaccine
Common Name: ChAdOx1-S* recombinant
Strength: 50000000 Other (describe)
Strength other: 50000000000 VP / 0.5 ML
Dosage form: solution
Manufacturer: AstraZeneca
Lot #: MT0056
Expiry date:
Product start date: 2021[redacted]
Product end date: 202[redacted]
Dosage:
Dosage other:
Frequency: Inject first dose at once
Route of administration: Intramuscular
Route of administration - Other:
Indication: Prevention of COVID-19
Reported to Mfr: No
Date reported to Mfr:

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received via COVAES from a contactable consumer professional (baby's mom). This consumer reported for both the mother and baby case. This is the baby case.

A fetus patient of an unspecified gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 transplacental on [redacted]2021 14:10 (Lot Number: FD7206; expiration date: 30Nov2021) as dose 1, 0.3 ml single for COVID-19 immunization. The mother at 32-years-old received the vaccine via intramuscular on [redacted]2021 in the Arm Right. The last menstrual period [redacted]2021 pregnancy due date is on [redacted]2022. The mother also did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No history of pregnancy complications, bleeding, spotting, and no history of miscarriage. 4 healthy, successful pregnancies. The patient medical history was not reported. Concomitant medication included ascorbic acid, biotin, calcium carbonate, calcium pantothenate, chromium nicotinate, colecalciferol, cupric oxide, cyanocobalamin, ferrous fumarate, folic acid, magnesium hydroxide, manganese gluconate, nicotinamide, phytomenadione, potassium iodide, pyridoxine hydrochloride, retinol, riboflavin, selenomethionine, sodium molybdate, thiamine hydrochloride, tocopheryl acetate, zinc gluconate (MULTIVITAMIN FOR WOMEN) taken for an unspecified indication, start and stop date were not reported. It was reported that the patient experienced Congenital anomaly/birth defect (reported as Congenital anomaly/birth defect: YES). The mother reported that: "At the time of my injection I was 5 weeks pregnant. I miscarried 13 days later (also reported a[redacted]2021 12:00). It was reported patient experienced Spontaneous abortion/ miscarriage with onset [redacted]2021 (Medically significant), outcome "fatal". I have no history of pregnancy complications, bleeding, spotting, and no history of miscarriage. I have had 4 healthy, successful pregnancies. I have no reason to believe this pregnancy would have been any different if not for receiving this vaccine which doesn't have adequate testing on pregnant women" The patient died on [redacted]2021. The reported cause of death was congenital anomaly and abortion spontaneous. It was not reported if an autopsy was performed. The events resulted in Doctor or other healthcare professional office/clinic visit. Outcome of previous pregnancies: live births- no complications. No problems before, after and during delivery. Mother and father did not smoke, drink alcohol, ilicit during this pregnancy.

This follow-up report is being submitted to amend previously reported information: Amendment: narrative updated to reflect that the events resulted in Doctor or other healthcare professional office/clinic visit.

According to the Product Quality Complaint Group report received on [redacted]2021: The investigation included reviewing the involved batch records, deviation investigation and an analysis of the complaint history for the reported lot and product type. The final scope was determined to be the associated lot(s) of the reported lot FD7206. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality, regulatory, validation and stability. PGS Puurs concludes that the reported defect is not representative of the quality of the batch and the batch remains acceptable. The NTM process determined that no regulatory notification was required. The reported defect could not be confirmed. No root cause or CAPA were identified as the complaint was not confirmed.

Follow-up ([redacted]2021): New information included Investigational report conclusion from Kalamazoo (EP) division for dose 1 (lot number: FD7206; expiration date: 30Nov2021).

Follow up ([redacted]021): This is a spontaneous follow-up report received from the same contactable consumer. Updated information included: Parent Route of Administration

Follow-up [redacted]2021): Follow-up attempts completed. No further information is expected

Follow up(10Jan2022): New information received via fax from a contactable reporter (Physician) Updated information: New adverse event Spontaneous abortion was added. New reporter added. Time for 1st dose was updated (BNT162B2). Biological Product box updated. Correspondence contact added. Patient tab was updated. Narrative updated. Clinical course information added.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association between the event abortion spontaneous with the suspect drug BNT162B2 cannot be excluded. The case will be reassessed once new information is available.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received via COVAES from a non-contactable consumer (patient). An 86-years-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE mRNA Vaccine), dose 2 via an unspecified route of administration on [redacted]2021 (Batch/Lot number was not reported) as single dose for covid-19 immunisation. The medical history was not reported. Prior to vaccination, the patient was not diagnosed with COVID-19. There was no concomitant medication. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced low hemoglobin on [redacted]2021 requiring transfusion of blood, hospitalization and then more blood and then death. Duration of hospitalization was 11 days. The event was serious as death, hospitalization, medically significant, life threatening. The event result in Doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. The patient died in [redacted]2021. It was not reported if an autopsy was performed. Since the vaccination, the patient had not been tested for COVID-19.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from contactable consumers via medical information team. A 76-year-old (reported as 75-78 years, pending clarification) female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on [redacted]2021 (Batch/Lot number was not reported) as single for COVID-19 immunization. Medical history included diabetes, renal failure: She was doing in-home care on renal dialysis, and heart attack from Aug2020 (pending clarification). The patient had a heart attack and was pretty stressed out from all the lock downs, she ended up getting 4 stents, was gifted with dialysis and renal failure as a result. She was doing in-home hospice care on renal dialysis. The patient's concomitant medications were not reported. The patient received the Pfizer Covid 19 vaccine on [redacted]2021. On [redacted]2021, she developed a blood clot in her leg. On [redacted]021, her affected leg was amputated. Her health started to deteriorate rapidly, whatever was spreading in her body went to her other leg so the surgeon wanted to remove the other leg but was afraid she wouldn't get past the anesthesia part and wouldn't come back. The surgeon felt like she would not be able to pull through the surgery. The reporter believed that her liver started to go downhill (2021). The patient passed away in [redacted]2021. The reporter added that he knew people would try to say she had preexisting conditions, she was under a lot of stress, but she didn't need to lose her leg and she didn't need to die as a result of this. The reporter mentioned that his partner's aunt received COMIRNATY on [redacted]021 in Canada. Two weeks later (on [redacted]2021), she had a blood clot, and on [redacted]2021 (the 15th day), she lost her leg, got worse, then passed away in [redacted]021. The patient died on [redacted]2021. It was not reported if an autopsy was performed.

The events occurred in a country different from that of the reporter. This may be a duplicate report if another reporter from the country where the event occurred has submitted the same information to his/her local agency.

The lot number for the vaccine, [BNT162B2], was not provided and will be requested during follow up.

Follow-up (25Oct2021): This is a follow-up report combining information from duplicate reports 202101368474 and 202101368364. The current and all subsequent information will be reported under manufacturer report number 202101368364.

The lot number for the vaccine, [BNT162B2], was not provided and will be requested during follow up.

Follow-up (25Nov2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts completed. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a non-interventional study report from a contactable other health professional. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report is No E2B_04285882. (Linked Regulatory No E2B_04022832). This information was initially reported to Health Canada on 14Jun2021 from an unknown Market Authorization Holder AER# CA2021AMR102648.

A 52-year-old male subject received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on an unspecified date (Batch/Lot number was not reported) as single dose for covid-19 prophylaxis; mepolizumab (manufacturer unknown), subcutaneous from an unspecified date (Batch/Lot number was not reported) to an unspecified date, at 100 mg for asthma. The subject's medical history and concomitant medications were not reported. The subject experienced injection related reaction on an unspecified date. Seriousness Criteria included death and other medically important conditions. The action taken in response to the event for mepolizumab was unknown. The subject died on an unspecified date. It was not reported if an autopsy was performed. Outcome of event was fatal.

The reporter's assessment of the causal relationship of the event with the suspect products was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on known drug safety profile, there is reasonable possibility of causal association between the event injection site reaction and BNT162B2.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a non-health professional and describes the occurrence of DEATH (Found dead in the bedroom) in a 17-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 vaccination.

No Medical History information was reported.

In [redacted] 2021, the patient received second dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. Death occurred on 2021 The cause of death was not reported. It is unknown if an autopsy was performed.

No relevant concomitant medications were reported.
Treatment information was unknown.

Patient was found dead in the bedroom, few days after 2nd dose of Moderna vaccine.

Company comment: This case involves a 17-year-old male subject with unknown medical history who experienced the serious unlisted adverse event of death a few das after receiving his second dose of mRNA-1273. The patient was found dead in his bedroom. No further information is currently available on the reason of his death or events that may have resulted in death. The reporter declined further information on his name or address.

The benefit-risk relationship of mRNA-1273 is not affected by this report.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case involves a 17-year-old male subject with unknown medical history who experienced the serious unlisted adverse event of death a few das after receiving his second dose of mRNA-1273. The patient was found dead in his bedroom. No further information is currently available on the reason of his death or events that may have resulted in death. The reporter declined further information on his name or address.

The benefit-risk relationship of mRNA-1273 is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (Death) and DRUG ABUSE (Drug overdose) in a 27-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 vaccination.

The patient's past medical history included Depression.

On an unknown date, the patient received first dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. On an unknown date, the patient experienced DEATH (Death) (seriousness criteria death and medically significant) and DRUG ABUSE (Drug overdose) (seriousness criterion medically significant). The patient died on an unknown date. The reported cause of death was drug overdose and Drug addiction. It is unknown if an autopsy was performed. At the time of death, DRUG ABUSE (Drug overdose) outcome was unknown.

The action taken with mRNA-1273 (Moderna CoviD-19 Vaccine) (Unknown) was unknown.

Concomitant medication was not reported.
Treatment information was not reported.

Company Comment:
The case concerns a 27-year-old-male patient with previous relevant medical history of drug abuse and depression, who experienced the unexpected events of drug abuse and died. The events occurred on unknown days after the vaccination with of Spikevax. patient's medical history of drug abuse and depression remains as confounders. The benefit-risk relationship of Spikevax is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a non-contactable consumer or other non-healthcare professional via the Medical Information Team. A male patient of an unspecified age received the second dose of BNT162B2 (COMIRNATY) via unspecified route of administration on unspecified date (batch/lot number was not reported) as DOSE 2, SINGLE and the first dose of BNT162B2 (COMIRNATY) via unspecified route of administration on unspecified date (batch/lot number was not reported) as DOSE 1, SINGLE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The consumer noted that he knows "fully vaaxed" persons that have died. He stated nobody he knows of has died from COVID. He stated, "I don't know, makes a guy wonder." One of them was a pretty good friend that he knew for years. The patient was double vaaxed, went to PRIVACY and didn't come back. They put him on a vent and blew up his lungs. "They should have given him a real drug like Ivermectin." The patient died on an unspecified date. It was unknown at the time of this report if an autopsy was performed.

No follow-up attempts are possible; information about the batch/numbers cannot be obtained. No further information is expected.
Comirnaty approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer. This consumer reported similar events for four family members. This is the first of 4 reports. A patient of unspecified age and gender received BNT162b2 (COMIRNATY; Lot Number: UNKNOWN), via an unspecified route of administration on an unspecified date as a single dose for COVID-19 immunisation. Ongoing medical history included congestive heart failure from an unknown date. The patient's concomitant medications were not reported. On an unknown date, the reporter stated that the patient had congestive heart failure and died from the vaccine. The cause of death was not provided. It was not reported if an autopsy was performed.

The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Amendment: This follow-up report is being submitted to amend previously reported information: to amend validity.

Amendment: This follow-up report is being submitted to allow appropriate reporting to health authorities.

Follow-up (14Dec2021): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from medical information team.

A 19-year-old consumer (patient) of unknown gender regarding PFIZER-BIONTECH COVID-19 VACCINE .A 19-years-old patient of an unspecified gender received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date (Batch/Lot number was not reported) as DOSE NUMBER UNKNOWN, SINGLE for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced died on an unspecified date , had three blood clots on an unspecified date. The patient died on an unspecified date. It was not reported if an autopsy was performed. Outcome of blood clots was unknown.

The lot number for [BNT162], was not provided and will be requested during follow up

Follow-up (27Dec2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from medical information team. The reporter is patient's cousin.

A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date (Batch/Lot number was not reported) as dose number unknown, single for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced dropped dead (death) (death) on an unspecified date. Patient dropped dead 12 hours after receiving the vaccine. Patient died on an unspecified date. It was unknown if an autopsy was performed.

The lot number for the vaccine, bnt162b2, was not provided and will be requested during follow up.

Follow-up (13Dec2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Re: Adverse Reaction Number 952325

Dear [redacted]

Thank you for your calls to the Canada Vigilance Program (CVP) on May 28, July 6 and August 4, 2021, regarding Zofran. We would like to express our deepest sympathy to you and your family for your loss and understand that this must be a difficult situation for you. We appreciate the time you took to call in about this tragic event and we apologize for the delay in our response but hope the information we provide will be helpful.

The information that you included in your call has been recorded in the Canada Vigilance Program database. The report has been assigned the Adverse Reaction Number 952325. Please reference the respective report number should you wish to report additional information on this event. Please note that Health Canada will contact you about your report only if additional information is required for its surveillance activities.

The CVP is Health Canada's post-market surveillance program that collects and assesses reports of suspected adverse reactions (ARs) to health products submitted by health professionals and consumers, who report voluntarily, and by manufacturers, distributors and hospitals, who are required to submit reports under the *Food and Drugs Act*. Consequently, we cannot provide you any legal advice but recommend you maintain all relevant documentation if you decide to pursue legal action.

The information from side effect reports as well as information from other sources of data is used to determine whether the benefits of a given health product continue to outweigh its risks and to take appropriate action to minimize any new risks. Such actions may include the update of the label of a health product in its authorized Canadian monograph, risk communication(s) to inform Canadians about possible new side effects and/or a recall of the product.

For consumer information on health products for sale in Canada, you may wish to consult the Drug Product Database. This site allows you to search the database and read the product monographs, which provide information including contraindications, warnings and precautions as well as adverse reactions associated with a particular product. As requested, the 4 product monographs Zofran, midazolam, morphine and lorazepam monographs have been attached as individual PDF files to this email.

Health Canada also has the Canada Vigilance Adverse Reaction Online Database, which is a subset of the database available from the adverse reaction database at Health Canada, and is updated monthly. The time period of the data presented remains 3 months behind, in order to account for data entry and quality control activities. You can use the Canada Vigilance Online Database to obtain information on Canadian AR reports that have been received for marketed health products, like Zofran.

For your concerns on the care your mother received at the hospital, you mentioned you were already in contact with the College of Physicians and Surgeons of Ontario. Any concerns related to the ethics of health care professionals, including unethical payoffs and any tools being used in hospitals for patient care must be reported to the profession's respective provincial colleges as the "practice of medicine" is provincially regulated. If needed, please see the contact information for the College of Physicians and Surgeons of Ontario below.

For your questions regarding the COVID-19 vaccination campaign, it has been redirected to the Public Health Agency of Canada (PHAC). You may follow-up with them directly via their email phac.vrtfcorrespondencegtpv.aspc@canada.ca. For the latest information on COVID-19, as well as vaccines and safety, you may visit the Government of Canada's COVID-19 webpage.

If you would like to be kept informed of Health Canada's advisories, recalls and other communication on health products, you may subscribe to MedEffect.

Once again, we would like to extend our sincere condolences, and wish you the best.

Hi EFAX,

As a follow-up, I spoke with the [redacted] consumer and just took down her mother's death report to the Pfizer vaccine & subsequent Zofran use. It's related to this case and the Online Submission Confirmation Number is **20210601135303_93155**.

Just for awareness, the patient also had further follow-up questions which I was unable to answer so if you could provide me with the **AER #** to ensure whomever is assigned to this case gets the whole picture. This also involves questions about the COVID-19 vaccination so I'm cc'ing Michelle Seguin as well.

Regards,
Jessica

ATIA - 19(1)

Hello,

We received a call over the weekend from a woman who was calling to report that her mother had passed away following an AR to the medication Zofran, which was administered while she was in the hospital last week. She was also questioning why this drug was administered to her mother in the first place and why it's approved by Health Canada, citing information she found online concerning multiple lawsuits in the US, and considering recourses.

As I do not have much experience yet and this call has potential medical/legal ramifications, I felt more comfortable escalating this case.

Caller:
[redacted]on behalf of her deceased mother.
[redacted]

Thank you !

Alexandre Dionne

Serious Disability:

Serious Hospitalization:

Serious Congenital Anomaly:

Serious Other:

Serious Other Explain:

Reaction 1

Outcome: Died

Reaction Start Date: 2021[redacted]

Reaction End Date:

Reaction Description: The reporter still strongly feels that the original reason her mother was in the hospital in the first place was with a headache, vomiting, diarrhea, upper left quadrant pain which could have been related to her first Pfizer shot. The patient's daughter also wanted to add that she just received her mother's autopsy results, which confirms she had fatal levels of morphine (134 when max is 120, with a margin of error of +/- 14) but they did not test for Zofran levels. She had some cysts on her kidney and ultimately passed away from an ischemic stroke. The patient is skeptical a proper full autopsy was done on her mother's body. Upon reviewing the hospital's EMAR system records, where [redacted] decided that after she had a stroke, she would be undergoing a palliative regimen without the reporter's consent. The physician, Dr[redacted] initiated a DNR protocol while the patient was still undergoing post-stroke treatment. They tested the patient for COVID-19 while she was in the hospital and she was negative as well. She would like me to emphasize that she has major concerns that the funding for medication is being highly biased towards pushing COVID-19 related treatments into Canadians due to profit for big pharma (e.g. become long term patients for big pharmaceutical companies). Funding partnerships like these are violations against human rights. Verbal report taken by[redacted] on Feb 4, 2022.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of MYOCARDIAL INFARCTION (Heart attack), RETINAL TEAR (Retinal tear), RETINAL DETACHMENT (Retinal detachment), MENTAL DISORDER (All DSM 5), DYSLEXIA (Dyslexia), NEOPLASM MALIGNANT (Cancer), RETINAL DEGENERATION (Retinal thinning), INTELLECTUAL DISABILITY (Retardation) and INTERCHANGE OF VACCINE PRODUCTS (Interchange of vaccine products) in a 29-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 vaccination.

Co-suspect product included non-company product BNT162B2 for COVID-19 immunisation.

The patient's past medical history included Meningococcal meningitis (Hospitalisation prolonged:Yes, No treatment received) in May 2018, Mental disorder NOS and Electroconvulsive therapy (Hospitalised for 4 days and hospitalization prolonged, Treatment received :unknown) on [redacted]-2021.

On [redacted]2021, the patient received second dose of BNT162B2 (unknown route) 1 dosage form.
On an unknown date, the patient received first dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. On [redacted]2021, the patient experienced INTERCHANGE OF VACCINE PRODUCTS (Interchange of vaccine products) (seriousness criterion medically significant). On an unknown date, the patient experienced MYOCARDIAL INFARCTION (Heart attack) (seriousness criteria death, hospitalization and medically significant), RETINAL TEAR (Retinal tear) (seriousness criterion medically significant), RETINAL DETACHMENT (Retinal detachment) (seriousness criterion medically significant), MENTAL DISORDER (All DSM 5) (seriousness criterion medically significant), DYSLEXIA (Dyslexia) (seriousness criterion medically significant), NEOPLASM MALIGNANT (Cancer) (seriousness criterion medically significant), RETINAL DEGENERATION (Retinal thinning) (seriousness criterion medically significant) and INTELLECTUAL DISABILITY (Retardation) (seriousness criterion medically significant). The patient died on [redacted]2021. The reported cause of death was Heart attack. It is unknown if an autopsy was performed. At the time of death, RETINAL TEAR (Retinal tear), RETINAL DETACHMENT (Retinal detachment), MENTAL DISORDER (All DSM 5), DYSLEXIA (Dyslexia), NEOPLASM MALIGNANT (Cancer), RETINAL DEGENERATION (Retinal thinning), INTELLECTUAL DISABILITY (Retardation) and INTERCHANGE OF VACCINE PRODUCTS (Interchange of vaccine products) outcome was unknown. Not Provided

No relevant concomitant and treatment medications were reported.

Company comment
This is a case of Interchange of vaccine products for this 29-year-old, male patient with no relevant medical history, who experienced the serious unexpected events of Myocardial infarction with a fatal outcome, Retinal tear, Retinal detachment, Mental disorder, Dyslexia, Neoplasm malignant, Retinal degeneration, and Intellectual disability. The events occurred on an unknown day after receiving the most recent COVID vaccine BNT162B2 (Pfizer vaccine) with date of administration [redacted] 2021. However, mRNA-1273 was also administered prior to the patient receiving the BNT162B2 for COVID-19 immunization. (Date of administration of Moderna product is in question per source document). The benefit-risk relationship of mRNA-1273 is not affected by this report.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This is a case of Interchange of vaccine products for this 29-year-old, male patient with no relevant medical history, who experienced the serious unexpected events of Myocardial infarction with a fatal outcome, Retinal tear, Retinal detachment, Mental disorder, Dyslexia, Neoplasm malignant, Retinal degeneration, and Intellectual disability. The events occurred on an unknown day after receiving the most recent COVID vaccine BNT162B2 (Pfizer vaccine) with date of administration [redacted] 2021. However, mRNA-1273 was also administered prior to the patient receiving the BNT162B2 for COVID-19 immunization. (Date of administration of Moderna product is in question per source document). The benefit-risk relationship of mRNA-1273 is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from medical information team.

A patient of unspecified age and gender received BNT162B2 (COMIRNATY, solution for injection), via an unspecified route of administration on an unspecified date (Batch/Lot number was not reported) as dose number unknown, single for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The reporter stated that the reporter has a friend who has lost 2 loved ones from the vaccine. The patient died on an unspecified date. It was not reported if an autopsy was performed.

The lot number for BNT162b2 was not provided and will be requested during follow up.

Follow-up (20Dec2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer. This consumer reported similar events for four family members. This is the fourth of 4 reports. A patient of unspecified age and gender received BNT162b2 (COMIRNATY; Lot Number: UNKNOWN), via an unspecified route of administration on an unspecified date as a single dose for COVID-19 immunisation. Ongoing medical history included congestive heart failure from an unknown date. The patient's concomitant medications were not reported. On an unknown date, the reporter stated that the patient had congestive heart failure and died from the vaccine. The cause of death was not provided. It was unknown if an autopsy was performed.

Follow-up (27Dec2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from medical information team.

A patient of unspecified age and gender received BNT162b2 (COMIRNATY; Lot Number: UNKNOWN), via an unspecified route of administration on an unspecified date as a single dose for COVID-19 immunisation. Ongoing medical history included congestive heart failure from an unknown date. The patient's concomitant medications were not reported. On an unknown date, the reporter stated that the patient had congestive heart failure and died from the vaccine. The cause of death was not provided. It was not reported if an autopsy was performed.

The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Follow-up (23Dec2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable Nurse. A 51 year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) as DOSE NUMBER UNKNOWN, SINGLE for COVID-19 immunisation. He died in [redacted] 2021 and he was vaccinated. He was out doing some exercises and he dropped dead. It was unknown if autopsy done. Outcome of the event was fatal.

Follow-up (25Jan2022): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The information currently provided is too limited to make a meaningful medical assessment. However, per company causality assessment guidance, the event of death with unknown cause is assessed as related until the cause of death is clarified.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (patient's friend). A 56-year-old male patient received the first dose of bnt162b2 (COMIRNATY) via an unspecified route of administration on an unspecified date (Lot number was not reported) as DOSE 1, SINGLE for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced passed away from a heart attack 3 days after his 1st dose on an unspecified date. The patient died on an unspecified date. It was not reported if an autopsy was performed.

No follow-up attempts are possible. No further information expected.

Summary (B.5)

Case narrative (B.5.1)

Based on the current case data, this case has been classified as invalid. This spontaneous case was reported by an other health care professional and describes the occurrence of DEATH (Friend died after receiving the Moderna vaccine) in a patient of an unknown age and gender who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 vaccination.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

For mRNA-1273 (Moderna CoviD-19 Vaccine) (Unknown), the reporter did not provide any causality assessments.

No relevant concomitant medication information provided.

No relevant treatment medication information provided.

Company Comment - This case concerns a patient of an unknown age and gender with no relevant medical history, who experienced the unexpected event of Death. The event occurred 22 days after receiving an unknown dose number of mRNA-1273 Vaccine with a fatal outcome. The rechallenge was unknown since only information about an unknown dose number was disclosed. The cause of death was not reported. It is unknown if an autopsy was performed. The benefit-risk relationship of mRNA-1273 Vaccine is not affected by this report.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case concerns a patient of an unknown age and gender with no relevant medical history, who experienced the unexpected event of Death. Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer. A 36-year-old female patient received bnt162b2 (COMIRNATY), via an unspecified route of administration on an unspecified date as dose number unknown, single for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient died in a pool of black blood on an unspecified date. The reporter stated that there was parasite and oxide found which was in the vaccine. The patient underwent lab tests and procedures which included: there was oxide in the vaccine, parasitic test: there was parasite in the vaccine. The outcome of event was fatal. It was unknown if autopsy was done to patient.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Amendment: This follow up report is being submitted to amend previously reported information: updated the event "died in a pool of black blood" coding from "hemoptysis" to "melena".

Follow Up Flag: Follow up
Flag Status: Flagged

Categories: Michelle, Red Category

Good Afternoon,

Here is the information you requested on this patient.

- As the patient did not receive the Pfizer vaccine at our facility, I am unable to answer if it was his first or second dose
- It is documented the patient did not have any known past medical history "None known – son states he has not seen a doctor in years" and prior to admission was not on any regularly prescribed medications
- At time of adverse event, patient was COVID-negative
- It is undetermined if this adverse event is directly related to the patient's presenting diagnosis – stroke
    - It is documented the patient had the vaccine 1 week prior to presenting to hospital
    - The patient underwent
        - Bloodwork
        - Diagnostic imaging (CT, MRI)
        - EEG
        - ICU admission
        - Intubation
        - Thrombectomy – unsuccessful
    - The patient passed away [redacted]

Please let me know if you require any further information.

Thank you,

[redacted]

Re: Health Canada Follow-Up Clarification Request

Good afternoon [redacted]

We are contacting you today to confirm receipt of the adverse event following immunization (AEFI) report submitted to the Canada Vigilance Program on **June 15th, 2021** regarding suspect products: **PFIZER COVID-19 VACCINE**.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified the present individual case safety reports (ICSRs) where clarification is needed in order to complete the case evaluation.

Canada Vigilance Case Number	Clarification Requested
000954410 (Organization/Institutional File No. [redacted]	Would you kindly have any information of the following: ☒ Information about the COVID-19 immunization: Was this the patient's first or second dose of Pfizer vaccine and timing of first vaccine dose (as relevant). ☒ Clinical information regarding the patient's current medical history, including any potential cardiovascular risk factors (e.g., diabetes, smoking history, hypertension, hyper-cholesterol or hyperlipidemia and history of ischemic heart diseases), any history of blood clotting, and patient's concurrent medications. ☒ Patient's COVID-19 status at the time of the adverse event? ☒ Information about any presenting symptoms and any pre-hospital treatment(s) related to the adverse event, including the following information as available: i. all side effects experienced post vaccination including a description of the side effect(s), time to onset, course and outcome e.g. if had fatigue time to onset, duration, if resolved, etc. ii. Additional information regarding any pre-hospital symptoms of the presenting CVA including start date, course and any treatments the patient received prior to arrival at hospital, and timing of any medications taken in the 24 hours prior to the event (including reason for e.g. regular prescribed medication vs PRN (and indication, if relevant).

May you please kindly respond to both myself, Michelle Séguin: michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Or, if you prefer, you may fax the requested information to the Canada Vigilance Program fax at 1-866-678-6789; please cite **case number 000954410.**

If you require further information within the scope of this request, please do not hesitate to contact me.

We thank you once again for your time.

Sincerely,

Michelle Séguin

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a non-contactable consumer via medical information reporting same event under the same suspect product for three patients. This is one of three reports.

A male patient of an unspecified age received bnt162b2 (COMIRNATY), via an unspecified route of administration on an unspecified date (Batch/Lot number was not reported) as DOSE NUMBER UNKNOWN, SINGLE for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced heart attack on an unspecified date. Reporter stated that she knew 2 younger males (exact ages unknown) who both died after heart attacks after receiving the Pfizer Covid-19 vaccine. Reporter also stated that she knew another male (exact age unknown) who also died from a heart attack after receiving the Pfizer Covid-19 vaccine. The patient died on an unspecified date. It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a non-contactable consumer via medical information reporting same event under the same suspect product for three patients. This is one of three reports.

A male patient of an unspecified age received bnt162b2 (COMIRNATY), via an unspecified route of administration on an unspecified date (Batch/Lot number was not reported) as DOSE NUMBER UNKNOWN, SINGLE for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced heart attack on an unspecified date. Reporter stated that she knew 2 younger males (exact ages unknown) who both died after heart attacks after receiving the Pfizer Covid-19 vaccine. Reporter also stated that she knew another male (exact age unknown) who also died from a heart attack after receiving the Pfizer Covid-19 vaccine. The patient died on an unspecified date. It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. The report concerns a male patient (age not provided) of Unknown ethnic origin.

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) 0.5 ml, via intramuscular route, on an unknown date. The patient died (MedDRA PT: Death) on an unspecified date.
Action taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable.

It was not known whether an autopsy was performed. The cause of death was death.

The event death was considered serious (death).

No lab data was available.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.CAUSE OF DEATH: DEATH
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case report concerns a patient with reported fatal outcome (PT: death) in association with AZD1222. Due to limited information regarding baseline characteristics of the subject before vaccination and further circumstances leading to the event, other relevant medical and family history of the patient, other concurrent diseases(cardiac disease, malignancy, kidney disease, liver disease) and concomitant medications, specific risk factors, autopsy details, etiological and complete diagnostic work-up(complete blood count, imaging study panel, cardiac markers, kidney function test, liver function tests), the evaluation did not find evidence to suggest a causal relationship between event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This case was initially received via Pfizer Inc (Reference number: 202101624815) on 19-Nov-2021. The most recent information was received on 11-Mar-2022 and was forwarded to BMS on 11-Mar-2022.
This spontaneous case was reported by a physician and describes the occurrence of DEATH in 102-year-old male patient who received apixaban (Eliquis) film-coated tablet for Cerebrovascular accident prophylaxis.

CO-SUSPECT PRODUCTS included tozinameran (Comirnaty) suspension for injection for COVID-19 immunisation.

On an unknown date, the patient started Eliquis (Oral), 2.5 milligram twice a day and Comirnaty (Intramuscular) total. DEATH occurred on an unknown date. The cause of death was not reported. It is unknown if an autopsy was performed.

For Eliquis(Oral), the reporter did not provide any causality assessments.
This case was received via Health Authority Canada (Reference number: CA-HEALTHCANVIG-E2B_04943036)
Most recent follow-up information received from the physician incorporated above includes: 11-Mar-2022. Reporter added, product attributes and narrative updated.

BMS Medical Evaluation Comment:
This patient who was on apixaban therapy along with tozinameran had died. Based on the limited information regarding the cause of death, autopsy report, it cannot be ascertained with reasonable possibility that apixaban contributed to the reported fatal event.

Summary (B.5)

Case narrative (B.5.1)

The initial safety information received was reporting only non-serious adverse drug reactions. Upon receipt of follow-up information on 15Nov2021, this case now contains serious adverse reactions. Information processed together.

This is a spontaneous report from a contactable consumer (daughter-in-law) via medical information team. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on an unspecified date (Batch/Lot number was not reported) as dose 2, single for COVID-19 immunisation. Medical history included lung cancer: less than a week to live with lung cancer. Vaccination history included: Covid-19 vaccine (dose 1, MANUFACTURER UNKNOWN), for Covid-19 immunization.Concomitant medications were not reported. A doctor prescribed her mother-in-law (patient) who had less than a week to live with lung cancer the second dose and she immediately fell ill. Although the consumer knew the patient didn't die from the vaccine, she was unnecessarily sick for a vaccine that she really did not need. The doctor sent a nurse to the house with the vaccine, in hours she was sick, in a day and half she was unresponsive. The patient was dying of lung cancer and had days to live. The patient died days after receiving the shot, the consumer doesn't believe her death was because of the vaccine but didn't help either. The consumer doesn't think her mother-in-law should have had the shot in the first place since she was dying of cancer. The patient died of lung cancer on an unspecified date. It was unknown if an autopsy was performed. The outcome of "she immediately fell ill/sick" was unknown.

Follow-up (21Dec2021): This follow-up is being submitted to notify that the lot/batch number for (all) doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received by Canada from a consumer concerning a male patient of Caucasian ethnic origin of age 62 years, height 68 in, weight 180 lb.

No medical history was reported. No concomitant products were reported. Patient was healthy and hiked everyday.

The patient received Dose 1 of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for unknown indication, on an unknown date. The patient received Dose 2 of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for unknown indication, on an unknown date. On an unknown date, the patient experienced dizzy spells (preferred term: Dizziness). Dizzy spells started directly after 1st dose. Patient got tested after the dizzy spells began and found nothing.

It was not applicable if any action was taken with dose 1 and dose 2 of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. The patient died from the event on [redacted]2021.

An autopsy was performed. The cause of death was dizzy spells (confirmed at autopsy).

The event was considered serious due to seriousness criteria death and life threatening.

The reporter considered the following event(s) related to treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)): dizzy spells. The reporter considered the following event(s) related to treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)): dizzy spells.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

All required follow-up attempts have been completed to obtain the Lot / Batch number for COVID-19 VACCINE ASTRAZENECA, however the Lot / Batch number was not received.

Summary of follow-up information received by AstraZeneca/MedImmune on 17-DEC-2021 : Lot / Batch number follow-up attempts information was updated into the narrative.AUTOPSY DETERMINED CAUSE OF DEATH: DIZZY SPELLS

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Dizziness (reported as DIZZY SPELLS) is not listed in the company core data sheet of AZD1222. The cause of death was reported as dizzy spells. The patient's overweight could be considered a contributory risk factor for the event. Due to limited information on details of the event leading to death, the exact date of vaccination, patient's baseline health condition before the vaccination, relevant medical history, family history, concurrent diseases, concomitant medications, discussion on lifestyle and risk factors, etiologic and diagnostic workup (complete laboratory workup, imaging techniques), treatment details, the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a Non-Interventional Study report from a contactable Other Health Professional. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report No E2B_04459575. (Linked Regulatory No E2B_03809929). This information was initially reported to Health Canada between 23Jul2021 and 28Jul2021 from an unknown Market Authorization Holder AER# CA2021AMR157705.

A 56-year-old female patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation; BNT162b2 (BNT162B2), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation; BNT162b2 (COMIRNATY), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation; chadox1 ncov-19 (CHADOX1 NCOV-19), as dose number unknown, single (Batch/Lot number: unknown) intramuscular for covid-19 immunisation; mepolizumab (MEPOLIZUMAB), (Batch/Lot number: unknown) at 100 mg, subcutaneous for asthma. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: INTERCHANGE OF VACCINE PRODUCTS (death), outcome "fatal", described as "Covid-19 vaccine/Chadox"; ASTHMA (death), outcome "fatal"; PRODUCT DOSE OMISSION ISSUE (death), outcome "fatal". The action taken for mepolizumab was unknown. The patient date of death was unknown. Reported cause of death: "Asthma", "Product dose omission issue". It was not reported if an autopsy was performed.

The reporter's assessment of the causal relationship of all events with the suspect product bnt162b2 was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (13Dec2022): This is a non-interventional study report received from the same contactable reporter(s) (Other HCP) from Regulatory Authority. Regulatory number: E2B_04459575 (Health Canada). This information was initially reported to Health Canada between 23Jul2021 and 19Aug2022 from an unknown Market Authorization Holder AER# CA2021AMR157705.

Updated information included: new suspect products (BNT162b2 (COMIRNATY), chadox1 ncov-19) and new event (Interchange of vaccine products).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on known drug safety profile, there is reasonable possibility of causal association between the event Asthma (fatal),and Interchange of vaccine products(fatal) and BNT162B2.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
Based on known drug safety profile, there is no reasonable possibility of causal association between the event Product dose omission issue (fatal) and BNT162B2.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a non-contactable reporter(s) (Consumer or other non HCP) from medical information team.

A patient (no qualifiers provided) received bnt162b2 (COMIRNATY) (Batch/Lot number: unknown) as dose 1, single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. The following information was reported: DEATH (death), outcome "fatal", described as "died". The patient date of death was unknown. The reported cause of death was "Died". It was not reported if an autopsy was performed. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from Regulatory Authority. Regulatory number: V2113283 (CAEFISS).

A 65 year-old female patient received bnt162b2 (BNT162B2), administration date [redacted]021 (Lot number: EW0216) as dose 1, single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: MYOCARDITIS (death, hospitalization, medically significant), outcome "fatal", described as "Myocarditis". The patient date of death was unknown. The reported cause of death was myocarditis. It was not reported if an autopsy was performed. Impact of Adverse Event Following Immunization (AEFI): prevented daily activities.

Subject: FW: Possible Serious Adverse Effect of mRNA Vaccine

Categories: COVID

Good morning,
Please see email below.
Thanks,
Ausmar

From [redacted]
Sent: 2021-06-16 8:15 AM
To: Canada Vigilance BC (HC/SC) <hc.canada.vigilance.bc.sc@canada.ca>
Cc: [redacted]
Subject: Possible Serious Adverse Effect of mRNA Vaccine

I am writing out of concern for how my mother passed away last week in [redacted] I have not been given much information on the causes because it happened too fast for even the doctors to keep up.

Her name was [redacted] and she passed on [redacted] 2021 in [redacted] hospital. She had gone in the [redacted] before with shortness of breath. They put her in a Covid Unit isolation while they investigated. She had already had the first dose of Pfizer Vaccine. They tested her 3 times for Covid and said they all came back negative. They explained that they were seeing a bunch of spots all over her lungs but had no explanations. Her oxygen was dropping rapidly so they moved her to a lung unit on [redacted] with oxygen. They tested her for everything they could think of from TB, Legionnaires, pneumonia, etc. and found nothing. Bionic antibiotics had no effect on it. She never smoked in her life and was physically walking every day. They began discussions with her sister about nursing home living and I was called on [redacted] to let me know. I wanted to speak to my mother, so a phone was taken back over the hospital, but they were in the process of moving her to palliative care! I never got to speak to her because she died at 1:12 a.m. [redacted] She went down hill extremely fast in 24 hours, and we have no explanation. They did say that maybe it was genetics?

Can I ask that this possibly be investigated, or has it been reported? I realize it is not immediately connected to when she got her vaccine. I am assuming she would have had it a few weeks before that, however I am not sure when she received her vaccine. I am nervous if it is genetic related and vaccine related because I am due to have my second shot and it will be a mix of Astra and Pfizer.

Thank you so much for any help, if any you can provide. I am sending this from my work email, but if you prefer my home contact it is: [redacted]

Sincerely,

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non healthcare professional) from Regulatory Authority. The reporter is the patient. Regulatory number: V2129701 (CAEFISS).

An 18 to 29 years (as reported) female patient (unknown if pregnant) received bnt162b2 (BNT162B2), administration date [redacted]2021 (Lot number: FA9099, expiration date: 30Nov2021) as DOSE 2, SINGLE for covid-19 immunization. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (Dose 1, single, Manufacturer Unknown, Date of application unknown), for covid-19 immunization. The following information was reported: MYOCARDITIS (death, hospitalization), outcome "fatal", described as "Myocarditis occurred 80640 minutes after vaccination". The patient date of death was unknown. The reported cause of death was myocarditis. It was unknown if an autopsy was performed.
Conclusion: The complaint for an Adverse Event Safety Request For Investigation from a vial the PFIZER-BIONTECH COVID-19 VACCINE lot FA9099 was investigated. The investigation included a review of manufacturing and packaging batch records, retain samples, deviation investigations, and an analysis of the complaint history for the reported lot. The final scope was determined to be the reported finished goods lot FA9099, fill lot FA9129, and the bulk formulated drug product lot EP8667. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality. No root cause or corrective and preventive actions (CAPA) were identified because the complaint was not confirmed.
No follow-up attempts are possible. No further information expected.

Follow-up (11Jan2022): This is a follow-up report from product quality group providing investigation results. Updated information included: expiration date of lot number FA9099. Investigation results provided.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from Regulatory Authority. Regulatory number: V2127581 (CAEFISS).

A 65 year-old male patient received bnt162b2 (BNT162B2), administration date [redacted]021 (Lot number: FA9091) as dose 2, single for covid-19 immunisation. Relevant medical history included: "gastrointestinal bleeding" (unspecified if ongoing); "cataract extraction" (unspecified if ongoing); "gout" (unspecified if ongoing); "hypertension" (unspecified if ongoing). The patient's concomitant medications were not reported. Past drug history included: Asa, notes: ASA 81 mg; Rabeprazole. Vaccination history included: Covid-19 vaccine (Dose 1, unknown manufacturer), for COVID-19 immunisation. The following information was reported: MYOCARDITIS (death, medically significant) with onset[redacted]2021, outcome "fatal", described as "Myopericarditis". Therapeutic measures were not taken as a result of myocarditis. The patient date of death was [redacted]021. The reported cause of death was myocarditis. It was not reported if an autopsy was performed. Impact of Adverse Events Following Immunization (AEFI): prevented daily activities.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a patient family member or friend and describes the occurrence of DEATH (passed away) in a 31-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 vaccination.

No Medical History information was reported.

On an unknown date, the patient received first dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form.
On an unknown date, received second dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) dosage was changed to 1 dosage form. Death occurred on[redacted]2021 The patient died on[redacted]2021. The cause of death was not reported. It is unknown if an autopsy was performed.

No relevant concomitant and treatment medications were reported.
Patient was doing amazingly well and as soon as he got his first and second dose, his body could not handle it any more and passed away within 2 months of his second shot.

Company comment
This case concerns a 31-year-old male patient with no relevant medical history, who experienced the serious unexpected event of Death. The event occurred on an unknown number of days after receiving the second dose of mRNA-1273 Vaccine with undisclosed vaccination date. The cause of death was not reported. It is unknown if an autopsy was performed. The benefit-risk relationship of mRNA-1273 Vaccine is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) for a Pfizer sponsored program (005570).

A male patient received bnt162b2 (COMIRNATY) (Batch/Lot number: unknown) as dose 2, single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (Dose 1, MANUFACTURER UNKNOWN), for COVID-19 immunisation.
The following information was reported: DEATH (death), outcome "fatal", described as "death". The patient date of death was unknown. The reported cause of death was "he dropped dead". Clinical course: The consumer stated the 2nd dose of the covid vaccine led to his/her father's death. He dropped dead. The patient left a full medical history on the table with instructions to sue Pfizer explaining how the vaccine affected a certain gene which led to his eventual death. It was not reported if an autopsy was performed.

The lot number for bnt162b2 was not provided and will be requested during follow up.

Follow-up (10Jan2022): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the Health Professional via regulatory authority in Canada (HEALTH CANADA) concerning a male patient of Unknown ethnic origin (age 70 years, height 159 cm, weight 63 kg).

No medical history and concomitant products were reported.

On an unknown date, the patient received Vaxzevria Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown), via intramuscular route, for covid-19 immunisation. On an unknown date, the patient received Chadox1 Ncov-19 (covid-19 vaccine nrvv ad (chadox1 ncov-19)) 0.5 ml , via intramuscular route, for covid-19 immunisation.

The patient started treatment with Lonsurf (tipiracil hydrochloride, trifluridine), oral, during 2020 for colorectal cancer metastatic.

During 2021, the patient experienced pneumonia (preferred term: Pneumonia).

It was unknown if any action was taken with Chadox1 Ncov-19 and Lonsurf. Action taken with Vaxzevria Vial Contains 10 Doses Of 0.5ml was not applicable.

During 2021, the patient died from the event for pneumonia.

It was not known whether an autopsy was performed. The cause of death was pneumonia.

The reporter assessed the event pneumonia to be serious due to seriousness criterion death and hospitalised.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of follow-up information received by AstraZeneca/MedImmune on 10-Jun-2022 from consumer via Spontaneous source: Action taken updated for both suspects. Start date added for the event, Narrative amended.

Summary of follow up information received by AstraZeneca/MedImmune on 08-Aug-2022 from health professional via spontaneous source: Reporter tab updated. New reporter health professional were added. Reporting verbatim of suspect updated to Covid-19 Vaccine Astrazeneca. suspect indication was updated to covid-19 immunisation. Causality was updated. Action taken with Lonsurf was changed. Lot no added as Unknown. Dosage text were added. Narrative amended.

Summary of follow up information received by AstraZeneca/MedImmune on 05-Sep-2022 from health professional via spontaneous source: New reference reporters added. duplicate case identified. associated changes made. Verbatim of the suspect updated from COVID-19 VACCINE ASTRAZENECA to VAXZEVRIA VIAL CONTAINS 10 DOSES OF 0.5ML.Narrative amended.

Summary of follow up information received by AstraZeneca/MedImmune on 07-Nov-2022 from health professional via spontaneous source: Suspect product CHADOX1 NCOV-19 was added, .Narrative amended.CAUSE OF DEATH: PNEUMONIA PNEUMONIA - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fata event of Pneumonia is not listed in the company core data sheet of AZD1222. The cause of death was reported as Pneumonia. Reported medical history of colorectal cancer metastatic and vaccinee's advance age could be considered as a risk factors for the event. Use of concomitant medication tipiracil hydrochloride, trifluridine could be considered as confounding factor for the event. Due to limited information on details and circumstances surrounding the event, exact date of vaccination, event onset date, concomitant medications, relevant family history, autopsy details, detailed etiological and diagnostic work-up, the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

		Fatal	

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer via the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY), concerning a male patient of unknown ethnic origin (age 95 years).

The patient's past and current medical history included prostate cancer (dates not reported), cardiac failure congestive (dates not reported) and dyspnoea (dates not reported).

No concomitant products were reported.

On an unknown date, the patient received Covid-19 Vaccine (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for covid-19 immunisation.

The patient started treatment with Eligard (leuprorelin acetate) 22.5 mg every three months, subcutaneous, on an unknown date for prostate cancer.

On an unknown date, the patient experienced cardiac failure congestive (preferred term: Cardiac failure congestive) and dyspnoea (preferred term: Dyspnoea).

The action taken with dose unknown Covid-19 Vaccine was not applicable. It was unknown if any action was taken with Eligard.

On an unspecified date, the patient died from the event of cardiac failure congestive and dyspnoea.

It was not known whether an autopsy was performed. The cause of death was cardiac failure congestive and dyspnoea.

The reporter assessed the events of cardiac failure congestive and dyspnoea as serious due to seriousness criterion of death.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

This case was marked as suppressed due to Duplicate case.

Summary of follow-up information received by AstraZeneca/MedImmune 10-Jun-2022 from consumer via spontaneous source: Action taken for Covid-19 vaccine updated to not applicable from unknown. Narrative amended. Corrected report on 16-Jun-2022: MAH refer number 202101022711 added. Narrative amended

Minor correction on 14-Jul-2022: Evaluate again on date 01-Jan-0001 removed. Relevant history prostate cancer, dyspnoea, cardiac failure congestive added. Narrative updated.

Summary of follow-up information received by AstraZeneca/MedImmune 04-May-2023 from consumer via spontaneous source: Duplicate case identified. Reporter case id associated. Narrative amendedCAUSE OF DEATH: CARDIAC FAILURE CONGESTIVE CAUSE OF DEATH: DYSPNOEA
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of Cardiac failure congestive and Dyspnoea are not listed in the company core data sheet of AZD1222. The cause of death was described as Cardiac failure congestive and Dyspnoea. Cardiac failure congestive could be considered as a confounding factor for Dyspnoea. Advanced age could be considered as a contributory risk factor for the events. Due to limited information on baseline health condition before vaccination, circumstances leading to the events, concurrent conditions, relevant medical history, family history, date of vaccination, onset date of the events, concomitant medications, risk factors (smoking, alcohol use, obesity, stress, and infection), etiological and complete diagnostic workup (detailed autopsy report), the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This solicited report received from a pharmacist via [redacted] Bio Advance REMICADE SIMPONI STELARA IMBRUVICA ZYTIGA TREMFYA ERLEADA EPREX BALVERSA concerned a 69 year old female (patient number: [redacted] (local case ID# [redacted].
The patient's height, and weight were not reported. The patient's concurrent conditions included: Crohn's disease.
The patient was treated with ustekinumab (Strength 130 milligram) (solution for infusion, intravenous and batch number: KL50H12 expiry: 30-NOV-2025) 520 mg, 1 time every 8 weeks, from [redacted]021 for Crohn's disease. Non-company suspect vaccine included: covid-19 vaccine (form of admin, route of admin, and batch number were not reported) dose, frequency, and therapy dates were not reported for covid-19 prophylaxis. No concomitant medications were reported.
On an unspecified date in 2021, the patient had gallstone and was going for ultrasound and blood work. Wants to know when the best time would be to get a booster of COVID. Had a flare up of her Crohn's with last COVID vaccine. The family doctor told her to ask us to see what to do about STELARA injection and COVID vaccine -I directed her to the doctors office.
The patient's spouse called to cancel medication since the patient passed away on a day before the day of reporting [redacted]2021). The patient died from unknown cause of death. It was unknown if an autopsy was performed.
The action taken with ustekinumab was not applicable with respect to passed away. The action taken with ustekinumab was not reported with respect to gall stones and flare up of Crohn's, and covid-19 vaccine was not applicable.
The patient died of passed away on [redacted]2021, and the outcome of gall stones and flare up of Crohn's was not reported.
The reporter considered the causality between ustekinumab, and passed away, flare up of Crohn's, and gall stones as related. The reporter did not provide a causality assessment between covid-19 vaccine, and passed away, flare up of Crohn's, and gall stones. Company causality between ustekinumab, and passed away, flare up of Crohn's, and gall stones was not related.
This report was serious (Death, and Other Medically Important Condition).
This case, involving the same patient is linked to 20211052390.

Additional information was received from other health professional (Pharmacist) on [redacted]2021 following information was updated and incorporated into case narrative:- End therapy updated, Additional event(Deceased and related fields), Disease tab(unknown cause of death, date of death, autopsy performed), Case level outcome and seriousness criteria updated, narrative updated, and other identification numbers was added.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

V1: Follow up information updates additional fatal event (deceased) and related fields, disease tab (unknown cause of death, date of death, autopsy performed), case level outcome and seriousness criteria, narrative updated, and other identification numbers.
This case concerns a 69-year-old female patient who experienced flare up of Crohn's after receiving COVID vaccine, unspecified period and later passed away due to unknown reason approximately 1 month after the initiation of Ustekinumab therapy for Crohn's disease. The reported event flare up of Crohn's after receiving COVID vaccine is confounded by patient's underlying disease of Crohn's disease which is chronic in nature, follows a remitting, relapsing path and is prone to progress and flare's, hence company causality assessed as not related.
Available information precludes complete and meaningful medical assessment hence causality of event passed away was assessed as not related

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a physician via the regulatory authority in Canada (HEALTH CANADA). The report concerned a female patient of Unknown ethnic origin (age 49 years).

No medical history was reported. Concomitant medication included acrivastine for premedication, paracetamol for premedication, aciclovir sodium for premedication, frovatriptan succinate monohydrate, gabapentin, gabapentin, dimenhydrinate for premedication, methylprednisolone sodium succinate for premedication, mirtazapine, naproxen, nortriptyline hydrochloride, ranitidine hydrochloride for premedication, venlafaxine hydrochloride, vitamin b12 nos, colecalciferol, herbal oil nos and zolmitriptan.

On an unknown date, the patient received unkown single dose of Covid-19 Vaccine Astrazeneca (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown), via intramuscular route, for covid-19 immunisation. The patient started treatment with Alemtuzumab (alemtuzumab) 12 mg daily, intravenous drip, on an unknown date for relapsing remitting multiple sclerosis and with Alemtuzumab (alemtuzumab) 12 mg daily, intravenous drip, on an unknown date for relapsing remitting multiple sclerosis.

On an unknown date, the patient experienced gait disturbance (preferred term: Gait disturbance), blood pressure increased (preferred term: Blood pressure increased), haemophagocytic lymphohistiocytosis (preferred term: Haemophagocytic lymphohistiocytosis), atypical pneumonia (preferred term: Atypical pneumonia), chest pain (preferred term: Chest pain), cough (preferred term: Cough), heart rate increased (preferred term: Heart rate increased), influenza (preferred term: Influenza), nasopharyngitis (preferred term: Nasopharyngitis), oral herpes (preferred term: Oral herpes), oropharyngeal pain (preferred term: Oropharyngeal pain), sinusitis (preferred term: Sinusitis), vertigo (preferred term: Vertigo), abdominal pain (preferred term: Abdominal pain), arthralgia (preferred term: Arthralgia), lymphadenopathy (preferred term: Lymphadenopathy), pyrexia (preferred term: Pyrexia), alopecia (preferred term: Alopecia), renal disorder (preferred term: Renal disorder), illness (preferred term: Illness), migraine (preferred term: Migraine), pain in extremity (preferred term: Pain in extremity), paraesthesia (preferred term: Paraesthesia), abdominal pain upper (preferred term: Abdominal pain upper), decreased appetite (preferred term: Decreased appetite), diarrhoea (preferred term: Diarrhoea), headache (preferred term: Headache), hyperhidrosis (preferred term: Hyperhidrosis), infusion site pain (preferred term: Infusion site pain), malaise (preferred term: Malaise), nausea (preferred term: Nausea) and death ((preferred term: Death).

Action taken with Covid-19 Vaccine Astrazeneca was not applicable. It was unknown if any action was taken with Alemtuzumab and Alemtuzumab.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

At the time of reporting, the events of gait disturbance, blood pressure increased, haemophagocytic lymphohistiocytosis, atypical pneumonia, chest pain, cough, heart rate increased, influenza, nasopharyngitis, oral herpes, oropharyngeal pain, sinusitis, vertigo, alopecia, renal disorder, abdominal pain upper, decreased appetite, diarrhoea, headache, hyperhidrosis, paraesthesia, infusion site pain, malaise, pain in extremity, nausea, migraine and illness were ongoing. On an unspecified date, the patient died due to abdominal pain, arthralgia, lymphadenopathy, and pyrexia.

It was unknown if autopsy was performed. The cause of death was death, abdominal pain, arthralgia, lymphadenopathy, and pyrexia.

The reporter assessed the events of death, abdominal pain, arthralgia, lymphadenopathy and pyrexia as serious due to seriousness criterion of death. The reporter assessed the events of death, abdominal pain, arthralgia, lymphadenopathy, pyrexia, gait disturbance, blood pressure increased, haemophagocytic lymphohistiocytosis, atypical pneumonia, chest pain, cough, heart rate increased, influenza, nasopharyngitis, oral herpes, oropharyngeal pain, sinusitis, vertigo, alopecia, renal disorder, abdominal pain upper, decreased appetite, diarrhoea, headache, hyperhidrosis, paraesthesia, infusion site pain, malaise, pain in extremity, nausea, migraine and illness as serious due to seriousness criterion of hospitalisation. The reporter assessed the events of death, abdominal pain, arthralgia, lymphadenopathy, pyrexia, gait disturbance, blood pressure increased, haemophagocytic lymphohistiocytosis, atypical pneumonia, chest pain, cough, heart rate increased, influenza, nasopharyngitis, oral herpes, oropharyngeal pain, sinusitis, vertigo, alopecia, renal disorder, abdominal pain upper, decreased appetite, diarrhoea, headache, hyperhidrosis, paraesthesia, infusion site pain, malaise, pain in extremity, nausea, migraine and illness as serious due to seriousness criterion of important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

On an unknown date, the patient underwent the laboratory tests which included blood pressure increased and heart rate increased.

Corrected report on 24-May-2022: The source changed to spontaneous, company causality removed on associated tab and triage tab, the event illness deleted, reference reporters added lot number added as Unknown, duplicate case id associated.

Summary of follow-up information received by AstraZeneca/MedImmune on 24-OCT-2022 from a physician via spontaneous source: Events death, abdominal pain, arthralgia, lymphadenopathy, pyrexia, alopecia, renal disorder, and illness were added. Action taken updated for AZ suspect from Unknown to Not applicable. Death tab updated. Lab tests added. Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

This case report concerns a 49 year old female vaccinee with reported fatal outcome (Preferred term: Death) in association with AZD1222. Gait disturbance, Blood pressure increased, Haemophagocytic lymphohistiocytosis, Atypical pneumonia, Chest pain, Cough, Heart rate increased, Influenza, Nasopharyngitis, Oral herpes, Oropharyngeal pain, Sinusitis, Vertigo, Alopecia and Renal disorder are not listed in the company core data sheet of AZD1222. Abdominal pain, Arthralgia, Lymphadenopathy and Pyrexia are listed adverse event for AZD1222, however, since the events were reported with fatal outcome they are considered unlisted. Vaccinee died on an unspecified date and the cause of death was reported as abdominal pain, arthralgia, lymphadenopathy, pyrexia, death and unknown cause of death. Events of Influenza and Nasopharyngitis could be considered as contributory factors to Cough, Oropharyngeal pain and Sinusitis. The event of Atypical pneumonia could be further considered as contributory facctor to Cough and Chest pain. Pyrexia could be also considered as contributory factor to Heart rate increased. Reported relapsing remitting multiple sclerosis could be considered as confounding factor for Gait disturbance. The case is further confounded by polypharmacy. Due to limited information on the exact date of death, onset dates of the events and the vaccine administration, baseline health condition before vaccination, possible risk factors, exact circumstances surrounding the events, clinical course of the events, detailed medical and family history, detailed aetiological and diagnostic workup (results of complete blood analysis, infectious profile, results of pulmonary and cardiological workup including radiology imaging studies), autopsy report with further clarification of the cause of death, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Case level outcome :Fatal

A spontaneous report has been received from a physician via the regulatory authority in Canada (HEALTH CANADA). The report concerned a female patient of Unknown ethnic origin (age 49 years).

No medical history was reported. Concomitant medication included acrivastine for premedication, paracetamol for premedication, aciclovir sodium for premedication, frovatriptan succinate monohydrate, gabapentin, gabapentin, dimenhydrinate for premedication, methylprednisolone sodium succinate for premedication, mirtazapine, naproxen, nortriptyline hydrochloride, ranitidine hydrochloride for premedication, venlafaxine hydrochloride, vitamin b12 nos, colecalciferol, herbal oil nos and zolmitriptan.

On an unknown date, the patient received unkown single dose of Covid-19 Vaccine Astrazeneca (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown), via intramuscular route, for covid-19 immunisation. The patient started treatment with Alemtuzumab (alemtuzumab) 12 mg daily, intravenous drip, on an unknown date for relapsing remitting multiple sclerosis and with Alemtuzumab (alemtuzumab) 12 mg daily, intravenous drip, on an unknown date for relapsing remitting multiple sclerosis.

On an unknown date, the patient experienced gait disturbance (preferred term: Gait disturbance), blood pressure increased (preferred term: Blood pressure increased), haemophagocytic lymphohistiocytosis (preferred term: Haemophagocytic lymphohistiocytosis), atypical pneumonia (preferred term: Atypical pneumonia), chest pain (preferred term: Chest pain), cough (preferred term: Cough), heart rate increased (preferred term: Heart rate increased), influenza (preferred term: Influenza), nasopharyngitis (preferred term: Nasopharyngitis), oral herpes (preferred term: Oral herpes), oropharyngeal pain (preferred term: Oropharyngeal pain), sinusitis (preferred term: Sinusitis), vertigo (preferred term: Vertigo), abdominal pain (preferred term: Abdominal pain), arthralgia (preferred term: Arthralgia), lymphadenopathy (preferred term: Lymphadenopathy), pyrexia (preferred term: Pyrexia), alopecia (preferred term: Alopecia), renal disorder (preferred term: Renal disorder), illness (preferred term: Illness), migraine (preferred term: Migraine), pain in extremity (preferred term: Pain in extremity), paraesthesia (preferred term: Paraesthesia), abdominal pain upper (preferred term: Abdominal pain upper), decreased appetite (preferred term: Decreased appetite), diarrhoea (preferred term: Diarrhoea), headache (preferred term: Headache), hyperhidrosis (preferred term: Hyperhidrosis), infusion site pain (preferred term: Infusion site pain), malaise (preferred term: Malaise), nausea (preferred term: Nausea) and death ((preferred term: Death).

DRAFT

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Continuation Sheet for CIOMS report **Mfr. Control No. :CA-AstraZeneca-2021A866513**

Action taken with Covid-19 Vaccine Astrazeneca was not applicable. It was unknown if any action was taken with Alemtuzumab and Alemtuzumab.

At the time of reporting, the events of gait disturbance, blood pressure increased, haemophagocytic lymphohistiocytosis, atypical pneumonia, chest pain, cough, heart rate increased, influenza, nasopharyngitis, oral herpes, oropharyngeal pain, sinusitis, vertigo, alopecia, renal disorder, abdominal pain upper, decreased appetite, diarrhoea, headache, hyperhidrosis, paraesthesia, infusion site pain, malaise, pain in extremity, nausea, migraine and illness were ongoing. On an unspecified date, the patient died due to abdominal pain, arthralgia, lymphadenopathy, and pyrexia.

It was unknown if autopsy was performed. The cause of death was death, abdominal pain, arthralgia, lymphadenopathy, and pyrexia.

The reporter assessed the events of death, abdominal pain, arthralgia, lymphadenopathy and pyrexia as serious due to seriousness criterion of death. The reporter assessed the events of death, abdominal pain, arthralgia, lymphadenopathy, pyrexia, gait disturbance, blood pressure increased, haemophagocytic lymphohistiocytosis, atypical pneumonia, chest pain, cough, heart rate increased, influenza, nasopharyngitis, oral herpes, oropharyngeal pain, sinusitis, vertigo, alopecia, renal disorder, abdominal pain upper, decreased appetite, diarrhoea, headache, hyperhidrosis, paraesthesia, infusion site pain, malaise, pain in extremity, nausea, migraine and illness as serious due to seriousness criterion of hospitalisation. The reporter assessed the events of death, abdominal pain, arthralgia, lymphadenopathy, pyrexia, gait disturbance, blood pressure increased, haemophagocytic lymphohistiocytosis, atypical pneumonia, chest pain, cough, heart rate increased, influenza, nasopharyngitis, oral herpes, oropharyngeal pain, sinusitis, vertigo, alopecia, renal disorder, abdominal pain upper, decreased appetite, diarrhoea, headache, hyperhidrosis, paraesthesia, infusion site pain, malaise, pain in extremity, nausea, migraine and illness as serious due to seriousness criterion of important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

On an unknown date, the patient underwent the laboratory tests which included blood pressure increased and heart rate increased.

Corrected report on 24-May-2022: The source changed to spontaneous, company causality removed on associated tab and triage tab, the event illness deleted, reference reporters added lot number added as Unknown, duplicate case id associated.

Summary of follow-up information received by AstraZeneca/MedImmune on 24-OCT-2022 from a physician via spontaneous source: Events death, abdominal pain, arthralgia, lymphadenopathy, pyrexia, alopecia, renal disorder, and illness were added. Action taken updated for AZ suspect from Unknown to Not applicable. Death tab updated. Lab tests added. Company Remarks (Sender's comments) (Cont...)

unspecified date and the cause of death was reported as abdominal pain, arthralgia, lymphadenopathy, pyrexia, death and unknown cause of death. Events of Influenza and Nasopharyngitis could be considered as contributory factors to Cough, Oropharyngeal pain and Sinusitis. The event of Atypical pneumonia could be further considered as contributory factor to Cough and Chest pain. Pyrexia could be also considered as contributory factor to Heart rate increased. Reported relapsing remitting multiple sclerosis could be considered as confounding factor for Gait disturbance. The case is further confounded by polypharmacy. Due to limited information on the exact date of death, onset dates of the events and the vaccine administration, baseline health condition before vaccination, possible risk factors, exact circumstances surrounding the events, clinical course of the events, detailed medical and family history, detailed aetiological and diagnostic workup (results of complete blood analysis, infectious profile, results of pulmonary and cardiological workup including radiology imaging studies), autopsy report with further clarification of the cause of death, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Physician) from a sales representative.

A 27-year-old male patient received bnt162b2 (BNT162B2), administration date 06Jul2021 (Batch/Lot number: unknown) as dose 2, single for covid-19 immunization.

The patient's relevant medical history was reported as none and was healthy. Concomitant medications were not reported. Vaccination history included: Bnt162b2 (Dose number: 1, Dose description: Dose 1, single), administration date: 15May2021, for Covid-19. Family medical history relevant to Adverse Event: Health family, Dad, Mom, Brother all alive. Vaccination facility type was Pharmacy or Drug Store.

The following information was reported: MYOCARDIAL INFARCTION (death, medically significant) with onset [redacted]021, outcome "fatal", described as "Myocardial Infarct (MI) and passed away"; INAPPROPRIATE SCHEDULE OF PRODUCT ADMINISTRATION (non-serious) with onset 06Jul2021, outcome "unknown", described as "first dose: 15May2021/ Second dose:06Jul2021". The patient date of death was [redacted]2021. Clinical course: A healthy 27-year-old male received the COVID 19 vaccines on 15May and 06July of 2021 and in the latter [redacted]2021, the patient had a Myocardial Infarct (MI) and passed away. The reporter feels that it may be related to the COVID 19 vaccine. The reported cause of death was myocardial infarction. The autopsy was performed, and results were not provided. Comments/ Narrative: I have Known this patient for many years and been his physician. No history for alcohol, drugs and smoking. He was healthy. Normal weight. He has a hardworking model citizen. Only difference between 2020 and 2021 were the 2 Covid vaccines he was taking. The safety of the vaccines are in question.

The lot number for bnt162b2 was not provided and will be requested during follow up.

Follow up [redacted]021): This is a spontaneous follow-up report received via fax from a contactable reporter (Physician): Pfizer/BioNTech COVID-19 Vaccine Follow-up Questionnaire.

Updated information included: Physician information, vaccination facility type, medical history and family medical history, Death Date was updated. Autopsy Done was added. Autopsy result was updated, Start and stop dates were completed for Historical vaccine. Start and stop dates were completed for dosage regimen. New Adverse Event added: Inappropriate schedule of drug administration and clinical information was updated.

Follow-up [redacted]021): New information received from a contactable physician included: It was reported that it may take up to six months to indicate results of autopsy or other postmortem findings.

Follow-up (24Jan2022): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the reported information ,a causal relationship between the events and suspected drug cannot be excluded.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter (Consumer). The reporter is the patient.

A 34 year-old male patient received bnt162b2 (BNT162B2), administration date [redacted]2021 (Lot number: FA9099) at the age of 34 years as dose 2, single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Bnt162b2 (Dose Number: 1, Batch/Lot No: EW0221, Location of injection: Arm Left), for COVID-19 Immunization.
The following information was reported: MYOCARDITIS (death) with onset [redacted]2021 18:00, outcome "fatal", described as "Lymphohistiocytic myocarditis resulting in sudden death at age 34.". The event "lymphohistiocytic myocarditis resulting in sudden death at age 34." was evaluated at the emergency room visit. The patient underwent the following laboratory tests and procedures: sars-cov-2 test: unknown results. Therapeutic measures were not taken as a result of myocarditis. The patient date of death was [redacted]2021. The reported cause of death was myocarditis. It was not reported if an autopsy was performed.

Additional information: The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine: Prior to vaccination, the patient was not diagnosed with COVID-19.

Summary (B.5)

Case narrative (B.5.1)

This is a non-interventional study report from Regulatory Authority. Regulatory number: E2B_04586624 (Health Canada). Other Case identifier(s): EU-2021-02662 (Unknown MAH). This is a report received from the Health Canada Regulatory Authority via an on-line database search. This information was initially reported to Health Canada on 24Aug2021 from an unknown Market Authorization Holder AER# EU-2021-02662.

A 70 year-old male patient received BNT162B2 (COVID-19 Vaccine - Manufacturer Unknown), intramuscular (Batch/Lot number: unknown) as dose number unknown, single for covid-19 immunisation; tipiracil hydrochloride, trifluridine (LONSURF), oral (Batch/Lot number: unknown) for colorectal cancer metastatic. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: PNEUMONIA (death, hospitalization), outcome "fatal", described as "Pneumonia". The action taken for tipiracil hydrochloride, trifluridine was unknown. The patient date of death was unknown. The reported cause of death was pneumonia. It was unknown if an autopsy was performed.

The reporter's assessment of the causal relationship of the "pneumonia" with the suspect product BNT162B2 was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association between the event pneumonia and the vaccine (BNT162B2)cannot be excluded
"The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

26.0	Haemophagocytic lymphohistiocytosis	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Headache	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Heart rate increased	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Hyperhidrosis	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Illness	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Influenza	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Infusion site pain	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Lymphadenopathy	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Malaise	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Migraine	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Nasopharyngitis	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Nausea	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Oral herpes	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Oropharyngeal pain	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Pain in extremity	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Paraesthesia	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Pyrexia	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Renal disorder	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Sinusitis	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Vertigo	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Related

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from a contactable reporter(s) (Physician) from Regulatory Authority. Regulatory number: E2B_04594271 (Health Canada). Other Case identifier(s): 2018SA310104 (Unknown MAH).

A 49-year-old female patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) intramuscular for covid-19 immunisation; alemtuzumab (ALEMTUZUMAB), (Batch/Lot number: unknown) for 3 days at 12 mg 1x/day, iv drip for relapsing-remitting multiple sclerosis; alemtuzumab (ALEMTUZUMAB), (Batch/Lot number: unknown) for 2 days at 12 mg 1x/day, iv drip for relapsing-remitting multiple sclerosis; chadox1 ncov-19 (CHADOX1 NCOV-19), (Batch/Lot number: unknown) intramuscular for covid-19 immunisation. The patient's relevant medical history was not reported. Concomitant medication(s) included: ACETAMINOPHEN iv drip taken for premedication; ACYCLOVIR [ACICLOVIR] oral taken for premedication; BENADRYL [DIPHENHYDRAMINE HYDROCHLORIDE] oral taken for premedication; FROVATRIPTAN oral; GABAPENTIN unknown; GRAVOL oral taken for premedication; METHYLPREDNISOLONE intravenous taken for premedication; MIRTAZAPINE oral; NAPROXEN oral; NORTRIPTYLINE oral; RANITIDINE oral taken for premedication; VENLAFAXINE oral; VITAMIN B 12 [VITAMIN B12 NOS] unknown; VITAMIN D [COLECALCIFEROL] unknown; VITAMIN E NOS unknown; ZOLMITRIPTAN oral; ACRIVASTINE oral taken for premedication; ACYCLOVIR SODIUM oral taken for premedication; FROVATRIPTAN SUCCINATE oral taken for premedication; METHYLPREDNISOLONE SODIUM SUCCINATE intravenous taken for premedication; NORTRIPTYLINE HYDROCHLORIDE oral; RANITIDINE HYDROCHLORIDE oral taken for premedication; VENLAFAXINE HYDROCHLORIDE oral.
The following information was reported: DEATH (death, hospitalization, medically significant), outcome "fatal"; ABDOMINAL PAIN (death, hospitalization, medically significant), outcome "fatal"; ARTHRALGIA (death, hospitalization, medically significant), outcome "fatal"; LYMPHADENOPATHY (death, hospitalization, medically significant), outcome "fatal"; PYREXIA (death, hospitalization, medically significant), outcome "fatal"; ABDOMINAL PAIN UPPER (hospitalization, medically significant), outcome "not recovered"; ATYPICAL PNEUMONIA (hospitalization, medically significant), outcome "not recovered"; BLOOD PRESSURE INCREASED (hospitalization, medically significant), outcome "not recovered"; CHEST PAIN (hospitalization, medically significant), outcome "not recovered"; COUGH (hospitalization, medically significant), outcome "not recovered"; DECREASED APPETITE (hospitalization, medically significant), outcome "not recovered"; DIARRHOEA (hospitalization, medically significant), outcome "not recovered"; GAIT DISTURBANCE (hospitalization, medically significant), outcome "not recovered"; HAEMOPHAGOCYTIC LYMPHOHISTIOCYTOSIS (hospitalization, medically significant), outcome "not recovered"; HEADACHE (hospitalization, medically significant), outcome "not recovered"; HEART RATE INCREASED (hospitalization, medically significant), outcome "not recovered"; HYPERHIDROSIS (hospitalization, medically significant), outcome "not recovered"; INFLUENZA (hospitalization, medically significant), outcome "not recovered"; INFUSION SITE PAIN (hospitalization, medically significant), outcome "not recovered"; MALAISE (hospitalization, medically significant), outcome "not recovered"; MIGRAINE (hospitalization, medically significant), outcome "not recovered"; NASOPHARYNGITIS (hospitalization, medically significant), outcome "not recovered"; NAUSEA (hospitalization,

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

medically significant), outcome "not recovered"; ORAL HERPES (hospitalization, medically significant), outcome "not recovered"; OROPHARYNGEAL PAIN (hospitalization, medically significant), outcome "not recovered"; PAIN IN EXTREMITY (hospitalization, medically significant), outcome "not recovered"; PARAESTHESIA (hospitalization, medically significant), outcome "not recovered"; SINUSITIS (hospitalization, medically significant), outcome "not recovered"; VERTIGO (hospitalization, medically significant), outcome "not recovered"; ALOPECIA (hospitalization, medically significant), outcome "not recovered"; RENAL DISORDER (hospitalization, medically significant), outcome "not recovered"; ILLNESS (hospitalization, medically significant), outcome "not recovered". The patient underwent the following laboratory tests and procedures: Blood pressure measurement: increased; Heart rate: increased. The action taken for alemtuzumab and alemtuzumab was unknown. The date and cause of death for the patient were unknown.

The reporter's assessment of the causal relationship of "death", "abdominal pain", "arthralgia", "lymphadenopathy", "pyrexia", "abdominal pain upper", "atypical pneumonia", "blood pressure increased", "chest pain", "cough", "decreased appetite", "diarrhoea", "gait disturbance", "haemophagocytic lymphohistiocytosis", "headache", "heart rate increased", "hyperhidrosis", "influenza", "infusion site pain", "malaise", "migraine", "nasopharyngitis", "nausea", "oral herpes", "oropharyngeal pain", "pain in extremity", "paraesthesia", "sinusitis", "vertigo", "alopecia", "renal disorder" and "illness" with the suspect product(s) COVID-19 Vaccine - Manufacturer Unknown was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

Follow up (05Apr2022): This is a follow up non-interventional study report from the same contactable Physician from Regulatory Authority. Regulatory number: E2B_04594271 (Health Canada). Other Case identifier(s): 2018SA310104 (Unknown MAH). This information was initially reported to Health Canada between 25Aug2021 and 03Dec2021 from an unknown Market Authorization Holder AER#2018SA310104. Updated information: new events added: illness, alopecia and renal disorder.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow up (18May2022): This is a follow up non-interventional study report from the same contactable Physician from Regulatory Authority. Regulatory number: E2B_04594271 (Health Canada). Other Case identifier(s): 2018SA310104 (Unknown MAH). This information was initially reported to Health Canada between 25Aug2021 and 07Jan2022 from an unknown Market Authorization Holder AER#2018SA310104. Updated information: new seriousness criteria and event reported: Death.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow up (19Jul2022): New information received from the same contactable Physician as a follow up for this same patient. This is a report received from the HC RA via an on-line database search. Regulatory authority report number E2B_04594271. This information was initially reported to Health Canada between 25Aug2021 and 09Mar2022 from an unknown Market Authorization Holder AER# 2018SA310104. Updated information: new events: Abdominal pain, Arthralgia, Lymphadenopathy and Pyrexia added.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (22Nov2022): This is a report received from the same contactable Physician as a follow up for this same patient. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number E2B_04594271. This information was initially reported to Health Canada between 25Aug2021 and 04Jul2022 from an unknown Market Authorization Holder AER# 2018SA310104. Updated information: Suspect drug details (new suspect products) and new concomitants updated.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on possible temporal association the causal role of BNT162B2 Vaccine cannot be excluded for reported events.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP).

A 70 year-old female patient (not pregnant) received bnt162b2 (BNT162B2), administered in arm right, administration date [redacted]2021 (Batch/Lot number: unknown) at the age of 70 years as dose 2, single for covid-19 immunisation. Relevant medical history included: "Deep vein thrombosis" (unspecified if ongoing); "Health problems" (unspecified if ongoing), notes: were all taken care of with proper monitoring and medication. The patient took concomitant medications. Past drug history included: Codiene, reaction(s): "Allergy". Vaccination history included: Bnt162b2 (Dose Number: 1, Batch/Lot No: Unknown. passed away and had been sick since her 2nd dose, Location of injection: Arm Right), for Covid-19 immunization. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.
The following information was reported: DEATH (death) with onset [redacted]2021, outcome "fatal", described as "and passed away"; MALAISE (death) with onset [redacted]2021, outcome "fatal", described as "My mother had been feeling unwell since her second dose". Therapeutic measures were taken as a result of death, malaise. The patient date of death was [redacted]2021. The reported cause of death was "passed away". It was not reported if an autopsy was performed. Clinical course: My mother had been feeling unwell since her second dose was administered. She called EMS [redacted]2021 and passed away on [redacted]2021. My mom had health problems that were all taken care of with proper monitoring and medication. You killed my mom! Medical treatment was received for palpitations. Prior to vaccination, the patient was not diagnosed with COVID-19; Since the vaccination, the patient has not been tested for COVID-19.

The lot number for bnt162b2 was not provided and will be requested during follow up.

Follow-up (14Feb2022): New information was received to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a non-contactable reporter Consumer.

A 52 year-old male patient received BNT162b2 (BNT162B2), administration date [redacted]2021 (Batch/Lot number: unknown) as dose 3 (booster), single for COVID-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: COVID-19 vaccine (Dose 1, MANUFACTUERER UNKNOWN), administration date: [redacted]2021, for COVID-19 immunisation; COVID-19 vaccine (Dose 2, MANUFACTUERER UNKNOWN), for COVID-19 immunisation.
The following information was reported: A 52 year old cardiologist, [redacted] was unexpectedly dead after spending much of 2021 [redacted] The patient received his first mRNA injection on [redacted] He promoted mRNA injections for 12 year olds and made the claim that the shots are undeniably safe. The patient received his 3rd injection booster on [redacted] His last Facebook post was published on [redacted] The patient died on an unspecified date. It was unknown if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

This solicited report received from a health care professional vi[redacted] BioAdvance REMICADE SIMPONI STELARA IMBRUVICA ZYTIGA TREMFYA ERLEADA EPREX BALVERSA concerned an 81 year old male (patient number: [redacted] (local case ID[redacted].
The patient's height, and weight were not reported. The patient's concurrent conditions included: Crohn's disease. The patient was treated with ustekinumab (solution for injection, subcutaneous, batch number: KKS1Z07 and LHS16MC expiry: UNKNOWN) 90 mg, frequency, and therapy dates were not reported for Crohn's disease. Non-company suspect vaccine included: covid-19 vaccine (form of admin and route of admin were not reported, batch number: UNKNOWN expiry: UNKNOWN) dose, start therapy date were not reported for covid-19 prophylaxis. No concomitant medications were reported.
On[redacted]2021, the patient experienced itchy rash from shoulder to elbows and across upper back, and joint pain/ sore shoulder. On[redacted]2021, the patient experienced shoulder discomfort. On an unspecified date, the patient experienced extremely fatigued, feeling weak, and having some trouble breathing. On[redacted] he went to the hospital and was admitted with pneumonia. He had been transferred to the intensive care unit (ICU) and was now on a ventilator. It was stated that he was tested negative for coronavirus disease (COVID-19). He was currently on intravenous (IV) antibiotics. On[redacted], the patient was died and died from unknown cause of death. It was unknown if an autopsy was performed.
The action taken with ustekinumab was not reported; and action taken with COVID-19 vaccine was not applicable. The action taken with ustekinumab was not applicable with respect to died.
The patient died of died on[redacted] and the outcome of itchy rash from shoulder to elbows and across upper back, joint pain/ sore shoulder, shoulder discomfort and pneumonia was not reported.
The reporter provided no causality assessment. Company causality between ustekinumab, and pneumonia was related, and between ustekinumab, and itchy rash from shoulder to elbows and across upper back, shoulder discomfort, joint pain/ sore shoulder, and died was not related.
This report was serious (Death, and Hospitalization Caused / Prolonged). This case, involving the same patient is linked to 20210210703, 20210720308 and 20220119358.
This case, from the Others is linked to 20220106274.

Additional information was received from other health care professional on[redacted] The following information was updated and incorporated into case narrative: disease (unknown cause of death), additional event(died), narrative updated and other identification numbers.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

V5: Follow up information updates on addition of serious event of died. This information does not alter previous causality assessment of serious event.
This case concerns a 81 year old male patient who was hospitalized for pneumonia manifested as having some trouble breathing, feeling weak and extremely fatigue for which received unspecified intravenous antibiotics and also reported patient died with unknown cause, unspecified duration after the initiation of ustekinumab therapy for Crohn's disease. Considering scientific plausibility to increase risk of infection due to immunomodulating nature properties of ustekinumab, causality was assessed as related with ustekinumab. Based on the available information, a reasonable possibility to suggest a relationship between the drug and the event died cannot be established, hence causality assessed as not related.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from product quality group.

An 85 year-old male patient received bnt162b2 (COMIRNATY), intramuscular (Batch/Lot number: unknown) as dose 3 (booster), single, (Batch/Lot number: unknown) as dose 2, single and (Batch/Lot number: unknown) as dose 1, single for covid-19 immunisation. Relevant medical history included: "Parkinson" (unspecified if ongoing); "terminal rectal cancer" (unspecified if ongoing). The patient's concomitant medications were not reported. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. It was unknown if the patient received any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. It was not known if the patient had allergies.
The following information was reported: DRUG INEFFECTIVE (death, medically significant), SUSPECTED COVID-19 (death, medically significant) all with onset [redacted]2022, outcome "fatal" and all described as "COVID-19 infection". The patient underwent the following laboratory tests and procedures: sars-cov-2 test: unknown result, notes: Since the vaccination, the patient has been tested for COVID-19. Therapeutic measures were taken as a result of drug ineffective, suspected covid-19 included oxygen therapy. The patient date of death was [redacted]2022 at 6:30 PM. The reported cause of death was drug ineffective, suspected covid-19. It was not reported if an autopsy was performed.

Product Quality Group provided investigational results on [redacted]2022 for bnt162b2: Comirnaty (lot: unknown, expiration date: unknown). Brief complaint description: Patient received 3 doses of Pfizer-Biontech vaccine. COVID-19 infection around 1 week prior to today, received oxygen therapy, death on [redacted] at 6:30 PM; Reasonably Suggest Device Malfunction? COVID-19 infection; Severity of Harm: death on Dec15th at 6:30 PM; Complaint Class: Product Use Attributes; Complaint Sub-Class: Lack Of Effect. Root Cause: Not provided Process Related: Not provided; Final Confirmation Status: Not provided; Vendor Related: not provided; Lot-Specific Trend Identified: Not provided; Lot Trend Assmt. & Rationale: Not provided; Lot Trend Actions Taken: Not provided; Other Trend Identified?:Not provided; Other Trend Assmt. & Rationale: Not provided; Site Sample Status: Not provided Summary of Investigation from Product Quality Complaints division was: nor provided ; Investigational report conclusion from Product Quality Complaints division was: not provided.

The lot number for bnt162b2 was not provided and will be requested during follow up.

Follow-up [redacted]2022) This is a follow-up report from product quality group providing investigation results. Updated information included: Investigational results.

The lot number for bnt162b2 was not provided and will be requested during follow up.

Follow-up [redacted]2022): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP).

A female patient received bnt162b2 (COMIRNATY) (Batch/Lot number: unknown) as dose number unknown, single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. The following information was reported: DEATH (death), outcome "fatal", described as "passed away". The patient date of death was unknown. The reported cause of death was "passed away". It was not reported if an autopsy was performed.
The lot number for bnt162b2 was not provided and will be requested during follow up.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP and Physician).

A 75 year-old male patient received bnt162b2 (COMIRNATY), intramuscular, administered in arm left, administration date [redacted]2021 11:45 (Lot number: E40578) at the age of 75 as dose 2, single for covid-19 immunisation. Relevant medical history included: "respiratory problems" (unspecified if ongoing); "Slight emphysema" (ongoing), notes: since a few years. There were no concomitant medications. Vaccination history included: Bnt162b2 (Dose Number: 1, Batch/Lot No: ER1742, Location of injection: Arm Left, Patient Route of Administration : Intramuscular), administration date: [redacted]2021, for covid-19 immunisation.
The following information was reported: CEREBROVASCULAR ACCIDENT (death, disability, hospitalization) with onset [redacted]2021, outcome "fatal", described as "stroke"; LOSS OF CONSCIOUSNESS (medically significant) with onset 2021, outcome "unknown", described as "loss of consciousness"; RESPIRATORY DISORDER (non-serious) with onset 2021, outcome "unknown", described as "respiratory disorder"; ABDOMINAL PAIN (non-serious) with onset 2021, outcome "unknown", described as "abdominal pain"; HEADACHE (non-serious) with onset 2021, outcome "unknown", described as "headaches". The patient was hospitalized for cerebrovascular accident (start date: [redacted]021, discharge date: [redacted]2021, hospitalization duration: 13 day(s)). Therapeutic measures were taken as a result of cerebrovascular accident. The patient date of death was [redacted]2021. The reported cause of death was cerebrovascular accident. No autopsy was performed. Additional information: Following the 2nd dose, my father had loss of consciousness, respiratory disorder, abdominal pain, headaches. Triple cerebrovascular accident with hospitalization on [redacted]2021, transferred to another hospital then died on [redacted]2021 at 07:45am. A hospital document signed by a contactable physician included the following information: Diagnosis: Left sylvian stroke secondary to occlusion "cTG", focal crisis secondary to stroke. The disability is related to a disease. Treatment: intravenous thrombolysis, Acetyl Salicylic Acid, Plavix Keppra. Surgery: Thrombolysis on [redacted]021, Thrombectomy/aspiration and stent of the right internal carotid artery on [redacted]2021.AE required visit to intensive care unit.

Follow-up (01Feb2022): This is a follow-up report from the same contactable consumer and physician. Updated information: Additional Reporter, Patient information, Relevant medical history, Suspect Product data. New events of Loss of consciousness, Respiratory disorder, Abdominal pain, Headache added.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The Company cannot completely exclude the possible causality between the reported fatal stroke, loss of consciousness and the administration of the COVID 19 vaccine, BNT162B2, based on the reasonable temporal association.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via Consumer. The report concerned a patient of unknown gender (age not provided) of Unknown ethnic origin.

No medical history was reported. No concomitant products were reported.

The patient received an unknown dose of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, on an unknown date. On an unknown date, the patient experienced dyspnoea (preferred term: Dyspnoea).

The action taken with suspect Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. The patient died from the event on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was dyspnoea.

The event dyspnoea was considered serious due to seriousness criteria death.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.CAUSE OF DEATH: DYSPNOEA
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal outcome of Dyspnoea is not listed in the company core data sheet for AZD1222.
The reported cause of death is Dyspnoea.
Due to limited information on the baseline health characteristics of the patient before vaccination and further clarification of the event, circumstances leading to the event, relevant medical and family history of the patient, concurrent diseases (Cardiovascular disease, Pulmonary disease, Hypertension, Autoimmune disease, Degenerative disease), concomitant medications, specific risk factors (lifestyle, diet, stress, smoker, alcohol consumption), etiological and complete diagnostic work-up (Cardiac biomarkers, immunoglobulin titer, blood chemistry, post-mortem autopsy), the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a non-contactable reporter(s) (Consumer or other non HCP) from medical information team.

A male patient received bnt162b2 (COMIRNATY) (Batch/Lot number: unknown) as dose number unknown (booster), single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (DOSE NUMBER X, MANUFACTRURER UNKNOWN), for COVID-19 Immunization. The following information was reported: DEATH (death, medically significant), outcome "fatal", described as "friend who passed away". The patient date of death was unknown. The reported cause of death was "friend who passed away". It was not reported if an autopsy was performed. Clinical course: Reporter said she had Covid before and has not been vaccinated. She was being required to be vaccinated was she wants to travel out of the country. She has gone to 3 different pharmacies to ask for information on the possible side effects of the Pfizer Covid Vaccine, each time she was told she could not be provided that information and she should contact Pfizer. She said normally with a medication you get a data sheet with 6-12 years worth of data on complications and complication risk. She asked why does Pfizer not provide this information. She asked why does Pfizer mandate this vaccine. Reporter said she recently had a friend who passed away after getting the Pfizer Covid Vaccine booster dose and prior to the vaccination he was healthy as a horse. She also states that her ex experienced something like bells palsy after getting the vaccine but he was now almost recovered. She asked why are people being forced, in order to travel, to put something in their bodies and then have no legal recourse if it causes them harm.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

ATIA - 19(1)

It is impossible for me to know if the vaccine had zero, minor, or a major effect in the event. There is reason to at least inquire if the vaccine played a role in the event as the US FDA and health officials in other countries have issued warnings for heart damage (sometimes resulting in failure), particularly in young men, and to avoid exercise for 48 hour minimum following the vaccine, and studies showing such damage and adverse events may take weeks to develop.

The event was sudden heart failure during exercise, with no known previous heart health conditions.

It aggravates me is that i submitted a report, 20210629145655_140254, and then a followup email, but have received received zero communication that this was being followed up on. What gives? Another young man i know was hospitalized for sudden serious heart problems within hours of second vaccine shot, and another died in a similar circumstance to this event, so forgive me for seeing a possible pattern.

Re: Side Effect Number 000956611

Dear [redacted]

Thank you for submitting a side effect report to the Canada Vigilance Program (CVP) on June 29, 2021, regarding COVID-19 vaccine. We would like to express our deepest sympathy for your loss and understand that this must be a difficult situation for you. We appreciate the time you took to write about this tragic event and hope that we will be able to address your concerns.

The information that you included in your report has been recorded in the CVP database and assigned the Side Effect Number 000956611. Please reference this number should you wish to report additional information on this event. Please note that Health Canada will contact you about your report only if additional information is required for its surveillance activities.

Regarding your concerns about links between COVID-19 vaccines and heart damage, please note that Health Canada, the Public Health Agency of Canada, the provinces and territories, and manufacturers continue to closely monitor this topic.

In particular, there have been reports associating COVID-19 vaccines with myocarditis (inflammation of the heart muscle) and/or pericarditis (inflammation of the lining around the heart).

For further information, please visit the Reported side effects following COVID-19 vaccination in Canada paying attention to the highlighted subtitle,

On this page

- What you need to know
- Definitions
- How to report an adverse event
- Summary of adverse event following immunization reports
- Adverse event following immunization reports by vaccine name
- Adverse event following immunization reports by age and sex
- Serious and non-serious adverse events reported
- Adverse events of special interest
- Data notes

Based on these very rare reports, and on other sources of information, Health Canada has updated the product monographs (labels) for the Pfizer-BioNTech and Moderna COVID-19 vaccines. Please visit the safety alert for further information.

The CVP is Health Canada's post-market surveillance program that collects and assesses reports of suspected adverse reactions to health products submitted by health professionals and consumers, who report voluntarily, and by manufacturers, distributors and hospitals, who are required to submit reports under the Food and Drugs Act.

Post-market surveillance enables Health Canada to monitor the safety of health products once marketed, to ensure that their benefits continue to outweigh their potential risks, and to take appropriate action to minimize new

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

risks. Such actions may include updating the label of a health product, risk communication to inform Canadians of new adverse reactions through safety alerts and/or product recall.

The information from side effect reports as well as information from other sources of data is used to determine whether the benefits of a given health product continue to outweigh its risks.

If you would like to be kept informed of Health Canada's advisories, recalls and other communication on health products, you may subscribe to MedEffect at: https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada/stay-informed-medeffect-canada.html.

Once again, we would like to extend our sincere condolences, and wish you the best. Please do not hesitate to contact the program if you need further information.

Summary (B.5)

Case narrative (B.5.1)

This solicited report received from a health care professional via [redacted] BioAdvance REMICADE SIMPONI STELARA IMBRUVICA ZYTIGA TREMFYA ERLEADA EPREX BALVERSA concerned a 70 year old male (local case ID# [redacted]
The patient's height, and weight were not reported. The patient's concurrent conditions included: myelodysplastic syndrome, and anemia due to myelodysplastic syndrome. The patient had no history of known drug allergies.
The patient was treated with epoetin alfa (solution for injection, subcutaneous, batch number: LFS3Z00, expiry: 01-NOV-2022) dose, frequency were not reported from [redacted] for anemia due to myelodysplastic syndrome. The patient received the non-company suspect drug included COVID-19 vaccine (formulation, route of administration not reported) dose, frequency and therapy dates not reported for COVID-19 prophylaxis. No concomitant medications were reported. It was reported that, due to underlying conditions and second dose of COVID-19 vaccine patient's condition worsened. After 2nd dose, went to hospital a couple times but was sent home and was okay during summer but after OCT everything worsened and snowballed with falling, stroke, and decrease in blood count. The patient actually had 1 injection before he had was admitted to hospital. Hospital was given 3 doses of the injection to use for patient and told her not helping. The patient was in hospital about a month and on [redacted] the patient died due to stroke. It was unknown if an autopsy was performed.
Treatment with epoetin alfa was withdrawn with respect to stroke, action taken with epoetin alfa was not reported for decrease in blood count, fall, and not helping.
Action taken with COVID-19 vaccine was not applicable with respect to stroke and not helping, action taken with epoetin alfa was not reported for decrease in blood count, and fall.
The outcome of the decrease in blood count, fall, and not helping was not reported.
The reporter considered the causality between epoetin alfa, and stroke as not related. The reporter did not provide a causality assessment between epoetin alfa, and decrease in blood count, fall, and not helping. Company causality between epoetin alfa, and stroke was related. Company causality between epoetin alfa, and decrease in blood count, fall, and not helping was not related.
This report was serious (Death, Hospitalization Caused / Prolonged, and Other Medically Important Condition).
This case, involving the same patient is linked to 20220126446.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

V0: Cerebrovascular accident. This event is labeled per RSI and is therefore considered potentially related.

Fall blood count decreased. The event has a compatible/suggestive temporal relationship, is unlabeled, and has unknown scientific plausibility. There are other factors more likely to be associated with the event than the drug. Specifically: UNDERLYING DISEASE. Therefore, this event is considered not related.

Fall. The event has a compatible/suggestive temporal relationship, is unlabeled, and has unknown scientific plausibility. There are other factors more likely to be associated with the event than the drug. Specifically: NATURE OF EVENT. Therefore, this event is considered not related.

Drug ineffective for unapproved indication. This event is labeled by standard procedures. Therefore, the event is considered not related.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Physician).

A 37-year-old female patient (not pregnant) received BNT162b2 (COMIRNATY), on [redacted]2022 as dose 1, single (Lot number: FN7934) at the age of 37 years intramuscular, in left deltoid for covid-19 immunisation. The patient's relevant medical history included: "Obesity" (unspecified if ongoing), notes: Moderately obese; "Acne" (unspecified if ongoing); "Contraceptive" (unspecified if ongoing). Concomitant medication(s) included: MYA taken for contraception, acne; ISOTRETINOIN taken for acne.
The following information was reported: PULMONARY EMBOLISM (death, medically significant) with onset [redacted]2022 at 15:00, outcome "fatal", described as "Pulmonary embolus". The event "pulmonary embolus" required emergency room visit. The patient underwent the following laboratory tests and procedures: SARS-CoV-2 test: [redacted]2022) Negative. It was unknown if therapeutic measures were taken as a result of pulmonary embolism. The patient date of death was [redacted]2022. Reported cause of death: "Pulmonary embolus - unknown source". The autopsy revealed "pulmonary embolus -unknown source" (pulmonary embolism).

Clinical course: Post the vaccination, the patient has not been tested for COVID-19. Physician reported that prior to patients death, patient was fine. On [redacted]2022, approximately 3 pm She was preparing dinner and took her 2-year old child to the bathroom. As she was walking back to the kitchen, she collapsed, clutched her chest, and complained that she cant breathe. Her husband called emergency medical services (EMS). She was taken inside an ambulance where the first responders tried to resuscitate her for 40 minutes but patient expired. Preliminary cause of death per coroner was massive embolism without known source. Autopsy was conducted and results are pending. The report of autopsy that was done and confirmed pulmonary embolism. He was told that the final autopsy report will be completed by [redacted]022. Preliminary diagnosis per coroner - pulmonary embolus unknown source. Age 37 - health, on long term oral contraceptive since birth of last child in [redacted]019, other wise healthy but moderately obese. No prior lung diseases or health issues. At the time of diagnosis, patient was negative of COVID and never had it. No investigations done before patients death. However, physician suggested that Pfizer contact the primary HCP to reconfirm this. Physician is not sure as he was not there but he believes the patient received a type of adrenaline when the first responders were trying to revive her. She might have received oxygen as well towards the end but he knows for a fact that she did not get oxygen right away. Patient was taking Mya both as a contraceptive and acne medication for about 8-9 months (exact start and end dates unknown). She also used an isotretinoin cream (exact name, strength, start and end dates unknown) for acne. No family history of blood clots (thrombophilia) or other bleeding disorders. Other risk factors for thrombosis included moderate obesity. Physician confirmed that the patient was a non-smoker and a non-drinker.

Follow-up attempts completed. No further information is expected.

Follow-up (21Apr2022): The following information was received as response to the follow-up questionnaire from the same contactable physician (also cousin of patient's husband). Updated information: Anatomical location updated to "Deltoid left". Emergency room checkbox ticked, as per source document. Obesity added as medical history.

Follow-up attempts completed. No further information is expected.

Follow-up (03May2022): This is a follow-up report received from the same contactable physician. Updated information included: Lab data, Treatment received, Concomitant medications.

Follow-up attempts completed. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association between the event Pulmonary embolism and the suspect drug bnt162b2 cannot be excluded.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP).

A 48 year-old male patient received bnt162b2 (BNT162B2), administered in arm left, administration date [redacted]2021 16:45 (Lot number: EX0904) at the age of 48 years as dose 1, single for covid-19 immunisation. COVID-19 vaccine was administered at Hospital. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: CEREBRAL VENOUS SINUS THROMBOSIS (death, hospitalization, medically significant, life threatening) with onset [redacted]2021 05:30, outcome "fatal", described as "CVST"; HAEMORRHAGE (death, hospitalization, medically significant, life threatening) with onset [redacted]021 05:30, outcome "fatal", described as "severe hemorrhage". Therapeutic measures were taken as a result of cerebral venous sinus thrombosis, haemorrhage. Patient was treated in ICU (Intensive care unit). The patient date of death was unknown. The reported cause of death was cerebral venous sinus thrombosis, haemorrhage. It was not reported if an autopsy was performed.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable Other HCP.

A male patient in his 70's received BNT162B2 (COMIRNATY), administration date [redacted]2022 (Batch/Lot number: unknown) as dose 2, single for COVID-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: COVID-19 vaccine (Dose 1, Manufacturer unknown), for COVID-19 immunisation. The following information was reported: DEATH (death) with onset 2022, outcome "fatal", described as "passed away". The cause of death was unknown. No autopsy was performed.

Clinical information: Reporter is a drug access coordinator. She is the patient's daughter. She stated that her healthy father in his 70s received a second dose of the Pfizer vaccine i[redacted] and died 12 days later. She stated that she believed the vaccine to be the cause of death. Symptoms are unknown but she did describe that her father was hospitalized before he passed and that she refused autopsy or further investigation of cause of death. Optional Information: She did go on to say that she still believed in the greater good of the vaccine.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (09Mar2022): This is a spontaneous follow-up report received from a contactable other HCP (Pfizer Colleague).
Updated information: Historical vaccine and Reporter contact information.

Follow-up (19Apr2022): This follow-up is being submitted to notify that the lot/batch number for all doses are not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association between the event Death and the suspect BNT162B2 cannot be excluded.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a non-contactable reporter(s) (Consumer or other non HCP) from medical information team.

A patient (no qualifiers provided) received bnt162b2 (COMIRNATY) (Batch/Lot number: unknown) as dose number unknown, single for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: DEATH (death), outcome "fatal", described as "Caller reports that a doctor is now dead from the vaccine". The patient date of death was unknown. The reported cause of death was "is now dead". It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

		Fatal	

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a health professional via the regulatory authority in Canada concerning a female patient (age not provided) of unknown ethnic origin.

The patient's past and current medical history included acute myeloid leukemia (dates not reported), stroke (dates not reported) and chronic pain (dates not reported) and No concomitant products were reported.

On an unknown date, the patient received dose unknown of Covid-19 Vaccine (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route for an unknown indication.

On an unknown date, the patient experienced confusional state (preferred term: Confusional state), decreased appetite (preferred term: Decreased appetite), lethargy (preferred term: Lethargy), mobility decreased (preferred term: Mobility decreased). The reporter stated that the hospital stated that the acute myeloid leukemia was recent and aggressive.

It was unknown if any action was taken with Covid-19 Vaccine.

During 2021, the patient died from the event of confusional state, decreased appetite, lethargy and mobility decreased.

It was not known whether an autopsy was performed. The cause of death was confusional state, decreased appetite, lethargy and mobility decreased.

The reporter assessed the events of confusional state, decreased appetite, lethargy and mobility decreased to be serious due to the seriousness criterion of death.

On an unknown date, the patient was tested for several blood test with results which does not showed up low counts of WBCs.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of follow up information received by AstraZeneca/MedImmune on 16-Aug-2022 from the health professional via Spontaneous Source: Year of death were added. Concomitant diseases added. Relevent history added. Lab test added. Narrative amended.CAUSE OF DEATH: CONFUSIONAL STATE CAUSE OF DEATH: DECREASED APPETITE CAUSE OF DEATH: LETHARGY CAUSE OF DEATH: MOBILITY DECREASED CONFUSIONAL STATE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes DECREASED APPETITE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes LETHARGY - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes MOBILITY DECREASED - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes Lab Test #1 : 10061726 The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of Confusional state and Mobility decreased are not listed in the company core data sheet of AZD1222. Decreased appetite and Lethargy are listed adverse events for AZD1222. However, since the events are reported with the seriousness criteria of death the events are considered unlisted. Cause of death was further specified as Confusional state, Mobility decreased, Decreased appetite and Lethargy. Reported history of acute myeloid leukemia could be considered as contributory factor for the event of Lethargy and Decreased appetite. Reported past and current medical history of stroke could be considered as risk factor for the event of Confusional state and Mobility decreased. Relevant past and current medical history of chronic pain could be considered as risk factor for the event of Lethargy and Mobility decreased. Due to limited information on exact circumstances leading to the events, exact date of vaccination, event onset dates, the clinical course, medical history, concurrrent conditions, concomitant medications, autopsy details, risk factors leading to the events, detailed etiological and diagnostic workup, the evaluation did not find evidence to suggest a causal relationship between events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted].

A patient (no qualifiers provided) received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: MYOCARDIAL INFARCTION (death), outcome "fatal", described as "heart attacks"; CEREBRAL THROMBOSIS (death), outcome "fatal", described as "brain clots". The patient date of death was unknown. Reported cause of death: "heart attacks", "brain clots". It was unknown if an autopsy was performed.

Clinical courses: the reporter can not confirm if the patient took Pfizer or Moderna.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Apr2022): This is a spontaneous follow-up report from the same contactable consumer.
Updated information included: new events (heart attacks, brain clots).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted]

A patient (no qualifiers provided) received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: MYOCARDIAL INFARCTION (death), outcome "fatal", described as "heart attacks"; CEREBRAL THROMBOSIS (death), outcome "fatal", described as "brain clots". The patient date of death was unknown. Reported cause of death: "heart attacks", "brain clots". It was unknown if an autopsy was performed.

Clinical courses: the reporter can not confirm if the patient took Pfizer or Moderna.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Apr2022): This is a spontaneous follow-up report from the same contactable consumer.
Updated information included: new events (heart attacks, brain clots).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted]

A female patient (unknown if pregnant) received BNT162b2 (COMIRNATY), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: ORGAN FAILURE (death), SEPSIS (death), outcome "fatal" and all described as "all organs shut down, sepsis set in and she died". The patient date of death was unknown. Reported cause of death: "all organs shut down, sepsis set in". It was unknown if an autopsy was performed.

Clinical courses: The death occurred within a month of receiving the vaccine.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Apr2022): This is a spontaneous follow-up report from the same contactable consumer.
Updated information included: Patient's gender, new events (organ failure and sepsis).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted]

A patient (no qualifiers provided) received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: MYOCARDIAL INFARCTION (death), outcome "fatal", described as "heart attacks"; CEREBRAL THROMBOSIS (death), outcome "fatal", described as "brain clots". The patient date of death was unknown. Reported cause of death: "heart attacks", "brain clots". It was unknown if an autopsy was performed.

Clinical courses: the reporter can not confirm if the patient took Pfizer or Moderna.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Apr2022): This is a spontaneous follow-up report from the same contactable consumer.
Updated information included: new events (heart attacks, brain clots).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

FORMULAIRE DE DÉCLARATION DES EFFETS SECONDAIRES

La déclaration des effets secondaires (aussi appelés « effets indésirables ») de produits de santé commercialisés au Canada peut contribuer à l'identification d'effets secondaires graves ou rares, ce qui peut entraîner la modification de l'information sur l'innocuité du produit.

Les instructions sur la façon de compléter et de soumettre le présent formulaire ainsi que l'information concernant la confidentialité se trouvent à la page 2. Compléter tous les items obligatoires, indiqués par un *, et fournir autant d'information que possible pour les autres items.

Veuillez envoyer le formulaire rempli par télécopieur au 1-866-678-6789. Pour de plus amples renseignements, composez le 1-866-234-2345.

PROTÉGÉ « B » LORSQUE REMPLI*

A) Renseignements sur la personne ayant subi l'effet secondaire

N° de référence (le cas échéant) :

1. Âge*	2. Sexe*	3. Taille	4. Poids
97 ans ____ mois	☐ Homme ☑ Femme	____ cm ____ pi ____ po	57.3 kg ____ lbs ____ oz

5. Antécédents médicaux et autres renseignements pertinents (allergies, grossesse, consommation de tabac/d'alcool, dysfonctionnement hépatique, etc.)

AVC coronaradiata frontal g 14/06/2021
HTO, diabète type 2, hypoTH,
TNCM mixtes modérés.

B) Renseignements sur le déclarant

1. Nom*	2. Téléphone*	3. Province/Territoire
[redacted]		

4. Adresse	5. Courriel
[redacted]	

6. Langue préférée
☑ français
☐ anglais

7. Organisation (le cas échéant)
[redacted]

8. Choisir ce qui vous décrit le mieux
☐ Consommateur ou autre non-professionnel de la santé ☑ Médecin ☐ Pharmacien
☐ Autre professionnel de la santé (spécifier) : _____

9. Cela a-t-il été déclaré au fabricant?
☐ Oui ☑ Non

C) Effet secondaire

1. Niveau de sévérité de l'effet secondaire
☑ Décès (fournir la date) [redacted] 2021.
☐ Met la vie en danger
☐ Hospitalisation
☐ Prolongation d'une hospitalisation
☐ Incapacité
☐ Malformation congénitale
☐ Besoin d'une intervention médicale

2. Rétablissement suite à l'effet secondaire*
☐ Oui ☑ Non ☐ Inconnu
☐ En cours de rétablissement (expliquer) : _____

3. Date du début de l'effet secondaire* (aaaa-mm-jj)	4. Date de la fin de l'effet secondaire (aaaa-mm-jj)
[redacted] 2021	décès [redacted] 2021

5. Décrire l'effet secondaire (ligne de temps, traitement, etc.)*

Confusion dès le lendemain du vaccin. HTA labile et altération de l'état de conscience dès le [redacted] 2021 <-> Altération de l'état de conscience a persisté jusqu'au décès.

D) Produit de santé soupçonné

1. Nom du produit*	2. Concentration	3. Fabricant
PBCOVID-19		Pfizer.

4. N° du lot	5. N° du DIN / N° du NPN
FA9099	

6. Pays d'achat
☑ Canada
☐ États-Unis
☐ Autre (spécifier) : _____

7. Où le produit a-t-il été acheté/obtenu?
☐ Pharmacie
☐ Épicerie
☐ Internet
☑ Autre (spécifier) : Centre de foires d'expocité.

8. Date du début du traitement (aaaa-mm-jj)*
2021-[redacted] 2e dose

9. Date de la fin du traitement (aaaa-mm-jj)

Aux environs de l'apparition de l'effet secondaire, spécifier :

10. Posologie (concentration, quantité)	11. Fréquence (p. ex. 2 fois par jour)	12. Voie d'administration du produit (p. ex. voie orale)
0.3 mL.	—	IM.

13. Pourquoi le produit a-t-il été pris/prescrit?*
2e dose vaccin.

14. Est-ce que l'utilisation du produit a cessé suite à l'apparition de l'effet secondaire?	15. Si l'utilisation du produit a cessé, l'effet secondaire s'est-il arrêté?
☐ Oui ☐ Non	☐ Oui ☑ Non ☐ Ne s'applique pas

16. Est-ce que l'utilisation du produit a recommencé suite à l'arrêt de l'effet secondaire?	17. Si l'utilisation a été recommencée, l'effet secondaire s'est-il reproduit?
☐ Oui ☐ Non ☑ Ne s'applique pas	☐ Oui ☐ Non ☑ Ne s'applique pas

18. Probabilité que le produit ait causé l'effet secondaire
☐ Certain
☐ Probablement/vraisemblablement
☐ Possiblement
☑ Pas disponible / incapable de vérifier
☐ Improbable
☐ Sans rapport

19. Autres produits de santé consommés aux environs de l'apparition de l'effet secondaire, excluant le traitement (temps d'utilisation, ligne de temps, etc.)
neutraline, novarc, lorenox.

20. Tests/données de laboratoire pertinents
FSC, ions, urée, créat @ [redacted] 2021
Famille a demandé des soins palliatifs et TDM tête n'a pu être effectué.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted]

A patient (no qualifiers provided) received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: MYOCARDIAL INFARCTION (death), outcome "fatal", described as "heart attacks"; CEREBRAL THROMBOSIS (death), outcome "fatal", described as "brain clots". The patient date of death was unknown. Reported cause of death: "heart attacks", "brain clots". It was unknown if an autopsy was performed.

Clinical courses: the reporter can not confirm if the patient took Pfizer or Moderna.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Apr2022): This is a spontaneous follow-up report from the same contactable consumer.
Updated information included: new events (heart attacks, brain clots).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

		Fatal	

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted]

A patient (no qualifiers provided) received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: MYOCARDIAL INFARCTION (death), outcome "fatal", described as "heart attacks"; CEREBRAL THROMBOSIS (death), outcome "fatal", described as "brain clots". The patient date of death was unknown. Reported cause of death: "heart attacks", "brain clots". It was unknown if an autopsy was performed.

Clinical courses: the reporter can not confirm if the patient took Pfizer or Moderna.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Apr2022): This is a spontaneous follow-up report from the same contactable consumer.
Updated information included: new events (heart attacks, brain clots).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a Health Professional via the regulatory authority in Canada (canadian health authority) concerning a 56-year-old female patient of Unknown ethnic origin.

No medical history and concomitant products were reported.

On an unknown date, the patient received Covid-19 Vaccine Astrazeneca (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown), via intramuscular route, for covid-19 immunisation.

On an unknown date, the patient started treatment with Comirnaty Vial Contains 6 Doses Of 0.3 ml after Dilution (tozinameran) for covid-19 immunisation and Mepolizumab (mepolizumab) 100.0 Milligram, subcutaneous, for asthma.

On an unknown date, the patient experienced asthma (preferred term: Asthma) and product dose omission issue (preferred term: Product dose omission issue).

It was not applicable if any action was taken with Covid-19 Vaccine Astrazeneca, Comirnaty Vial Contains 6 Doses Of 0.3 ml after Dilution and it was unknown if any action was taken with Mepolizumab.

The patient died from the event of asthma and product dose omission issue on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was asthma and product dose omission issue

The reporter assessed the events of asthma and product dose omission issue to be serious due to seriousness criteria of death.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of follow up information received by Astrazeneca/Medimmune on 08-Aug-2022 from Health Professional via spontaneous source: Reporter updated to HCP, Reference numbers added, Action taken updated to not applicable. Narrative amended.CAUSE OF DEATH: ASTHMA CAUSE OF DEATH: PRODUCT DOSE OMISSION ISSUE ASTHMA - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes PRODUCT DOSE OMISSION ISSUE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Asthma and Product dose omission issue are not listed in the company core data sheet of AZD1222. Notable, that concomitant medication included Mepolizumab (mepolizumab) 100.0 Milligram, subcutaneous, for asthma. Due to limited information on risk factors, date of the vaccination, circumstances surrounding the events, relevant medical and family history, detailed etiological and diagnostic work-up (complete blood analysis including inflammatory markers, general physical examination, radiology imaging studies), treatment details and in the absence of autopsy report, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from a contactable reporter(s) (Pharmacist) from Regulatory Authority. Regulatory number: E2B_05011774 (Health Canada).

A 69-year-old female patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) intramuscular for covid-19 immunisation; ustekinumab (STELARA), (Batch/Lot number: unknown) at 520 mg (520 mg, 1 every 8 weeks), intravenous for crohn's disease. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: CHOLELITHIASIS (death, medically significant), outcome "fatal"; CROHN'S DISEASE (death, medically significant), outcome "fatal"; DEATH (death, medically significant), outcome "fatal". The action taken for ustekinumab was unknown. The date and cause of death for the patient were unknown.

The reporter's assessment of the causal relationship of "cholelithiasis", "crohn's disease" and "death" with the suspect product(s) COVID-19 Vaccine - Manufacturer Unknown was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on known drug safety profile, there is reasonable possibility of causal association between the events CHOLELITHIASIS, CROHN'S DISEASE, and DEATH and BNT162B2.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a literature report for the following literature source(s): [redacted]

A 27-year-old male patient received BNT162b2 (BNT162B2), as dose 2, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history included: "bilateral lung transplant recipient" (unspecified if ongoing); "cystic fibrosis" (unspecified if ongoing); "Antibody-Mediated Rejection" (unspecified if ongoing); "grade 2 rejection" (unspecified if ongoing). Concomitant medication(s) included: METHYLPREDNISOLONE taken for liver transplant rejection. Vaccination history included: Bnt162b2 (Dose 1|, for covid-19 immunization.The following information was reported: CLOSTRIDIUM DIFFICILE INFECTION (death, hospitalization, medically significant), outcome "fatal"; TRANSPLANT REJECTION (death, hospitalization, medically significant), outcome "fatal", described as [redacted] ORGANISING PNEUMONIA (death, hospitalization, medically significant), outcome "fatal", described as "organizing pneumonia". The patient underwent the following laboratory tests and procedures: Antibody test: decreased but remained elevated; Bronchoscopy: Negative, notes: infectious etiology; Computerised tomogram: findings consistent with organizing pneumonia, notes: versus opportunistic infection; HLA marker study: [redacted] notes: [redacted] Therapeutic measures were taken as a result of clostridium difficile infection, transplant rejection, organising pneumonia. The patient date of death was unknown. Reported cause of death: [redacted] "Clostridium difficile infection". It was not reported if an autopsy was performed [redacted] This case of probable AMR post mRNA vaccination in a lung transplant recipient raises clinical suspicion for a serious adverse event and contributes to safety data for this select population.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (30Apr2022):This is a literature report for the following literature source(s): [redacted] This is a follow-up report based on the receipt of the publication; the case has been updated to include additional information identified in the publication.Updated information included narrative updated with follow up statement.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information provide and plausible temporal association, the causality between BNT162B2 and events cannot be completely excluded.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP).

A female patient received BNT162b2 (COMIRNATY), on [redacted]2022 as dose 4 (booster), single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (DOSE 1; MANUFACTURER UNKNOWN), for COVID-19 immunisation; Covid-19 vaccine (DOSE 2; MANUFACTURER UNKNOWN), for COVID-19 immunisation; Covid-19 vaccine (DOSE 3; MANUFACTURER UNKNOWN), for COVID-19 immunisation.
The following information was reported: DEATH (death) with onset [redacted]2022 at 23:00, outcome "fatal", described as "My aunt took your 4th vaccine shot yesterday / She died last night at 11pm". The patient date of death was [redacted]2022. The reported cause of death was unknown.
No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a pharmacist via the regulatory authority in Canada (CANADA HEALTH AUTHORITY), concerning a 69 year old female patient of unknown ethnic origin.

The patient's past and current medical history included crohn's disease (ongoing) and unknown cause of death (dates not reported). No concomitant products were reported.

On an unknown date, the patient received unknown dose of Covid-19 Vaccine (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number Unknown), via intramuscular route, for covid-19 prophylaxis. During 2021, the patient started treatment with Stelara (ustekinumab) (batch number(s) KLS0H12 KLS0H12) (expiration date 30-Nov-2025), 520 Milligram, 1 every 8 (weeks), intravenous (not otherwise specified), for crohn's disease.

During 2021, the patient experienced flare up of crohns (preferred term: Crohn's disease) with covid vaccine, gallstones (preferred term: Cholelithiasis) and the patient passed away; died (preferred term: Death). On an unknown date, the patient had gallstones and was going for ultrasound and blood work.

Action taken with Covid-19 Vaccine and Stelara was not applicable.

The outcome of the events of flare up of crohns and gallstones was unknown.

t was unknown if autopsy was performed. The cause of death was unknown.

The reporter assessed the event of passed away to be serious due to seriousness criterion of death. The reporter assessed the events flare up of crohns, gallstones and passed away to be serious due to seriousness criterion of important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of follow up information received by AstraZeneca/MedImmune on 18-Apr-2022 from Pharmacist via spontaneous source: Primary reporter changed from consumer to pharmacist, case medically confirmed ticked. Report corrected on 21-Apr-2022: New reference reporter added with the last name MAH AER Number. Narrative amended.

Summary of follow-up information received by AstraZeneca/MedImmune on 08-Aug-2022 from a pharmacist via spontaneous: Death tab updated; Date of death and cause of death (Unknown cause of death) added. Action taken for suspect products updated from Unknown to Not applicable. Outcome of events flare up of crohns and Gallstones updated from Fatal to Unknown. Details of suspect Stelara updated. Start date for all the events added. Coding and Event verbatims updated; verbatim Death updated to Passed away, Crohn's disease updated to flare up of crohns (LLT changed from Disease Crohns to Crohn's disease aggravated, Cholelithiasis to Gallstones (LLT changed from Cholelithiasis to Gallstones). New reference reporter added. Relevant history added. Date of birth added. Narrative amended.CAUSE OF DEATH: PASSED AWAY CAUSE OF DEATH: UNKNOWN CAUSE OF DEATH PASSED AWAY - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes FLARE UP OF CROHNS - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes GALLSTONES - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes Lab Test #1 : 10045434 Lab Test #2 : 10061726 The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case concerns a 69-year-old female vaccinee with reported Death and fatal events of Crohn's disease and Cholelithiasis in association with AZD1222. Underlying history of Crohn?s disease could be considered as confounding factor to the event of Crohn?s disease. Age of vaccinee and female gender could be considered as possible risk factors for Cholelithiasis. The cause of death was reported as death, Crohn?s disease, cholelithiasis and death. Due to limited information on baseline health condition before vaccination, relevant medical history, relevant family history, concurrent diseases, concomitant medications, date of vaccination, start date of using ustekinumab, onset date/clinical course of Crohn's disease and Cholelithiasis, date of death, details of the events, circumstances surrounding the events, further risk factors (smoking, past and recent infections, genetic predisposition), and detailed diagnostic and etiologic workup, autopsy report with confirmed diagnosis, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a consumer via regulatory authority and described the occurrence of unknown cause of death in a 93-year-old male patient who received mepolizumab solution for injection in pre-filled pen (batch number BL2S, expiry date 30th June 2023) for eosinophilic asthma.

Co-suspect products included mepolizumab autoinjector device administration system (batch number BL2S, expiry date 30th June 2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled pen (batch number H36E, expiry date 30th September 2023) for eosinophilic asthma, mepolizumab autoinjector device administration system (batch number H36E, expiry date 30th September 2023) for eosinophilic asthma and tozinameran (Comirnaty) solution for injection for covid-19 immunization.

Additional subject notes included Patient was Afebrile. Patient history was unknown.. Concomitant products included fluticasone propionate + salmeterol xinafoate (Advair), salbutamol (Ventolin), olodaterol hydrochloride + tiotropium bromide (Inspiolto), tiotropium bromide (Spiriva), pregabalin and olodaterol hydrochloride + tiotropium bromide monohydrate.

On [redacted] 2021, the patient started mepolizumab (subcutaneous) 100 mg (see dose text), mepolizumab autoinjector device, mepolizumab (subcutaneous) 100 mg (see dose text) and mepolizumab autoinjector device. On an unknown date, the patient started Comirnaty at an unknown dose and frequency. On an unknown date, the dose was changed to an unknown dose and frequency. On an unknown date, the dose was changed to an unknown dose and frequency. O[redacted] 2022, the dose was changed to an unknown dose and frequency. On [redacted] 2022, 232 days after starting mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device, the patient experienced drug dose administration interval too long (serious criteria hospitalization and other: Serious per Reporter). On an unknown date, the patient experienced unknown cause of death (serious criteria death and GSK medically significant), pneumonia (serious criteria hospitalization, GSK medically significant and other: Serious per Reporter), cough (serious criteria hospitalization and other: Serious per Reporter), sputum discolored (serious criteria hospitalization and other: Serious per Reporter) and productive cough (serious criteria hospitalization and other: Serious per Reporter). The subject was treated with prednisone and antibiotics nos (Antibiotic (Active Ingredient Unknown)). On an unknown date, the outcome of the unknown cause of death was fatal and the outcome of the pneumonia was not recovered/not resolved and the outcome of the drug dose administration interval too long, cough, sputum discolored and productive cough were unknown. The reported cause of death was unknown cause of death.

It was unknown if the reporter considered the unknown cause of death, pneumonia, cough, sputum discolored, productive cough and drug dose administration interval too long to be related to mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Linked case(s) involving the same patient:CA2021AMR209964, CA2022016112

GSK Receipt Date:[redacted] 2022
Reporter's Comments: This report was submitted via the online direct entry reporting system. The patient was also the reporter. Reporter type was consumer. Post infusion report mentioned that the patient with intermittent cough but stable. Wife present. Patient said he had dark green mucus since past week and was afebrile. Patient was advised via phone by his physician yesterday[redacted] 2022) to start his action plan. Patient said he would start his Prednisone and antibiotic this afternoon[redacted] 2022). Injection well tolerated. No issues. Patient stable at writer's departure. No further information provided. Patient history was unknown. Reporter and Health Care Provider (HCP) did not consent to contact.

Follow-up information received on[redacted] 2022. This follow-up was considered significant.
It was reported that on an unknown date patient experienced productive cough. On an unknown date, outcome of the event productive cough. The causality of the event productive cough was unknown. Reporter's Comments: Post infusion report: Patient stable, wife present. Intermittent dry cough noted. Patient had productive cough with white secretions yesterday evening per wife. Respiratory therapist present. Nasal O2 was adjusted from 8LPM to 7.5LPM as O2 sat reading was 96%. Injection tolerated well. No issues. Patient stable at depart. No further information provided. Summary of changes: Added additional event, batch number of suspect drug.

Follow-up information received on[redacted] 2022. This follow-up was considered significant
Reporter's Comments: Patient's wife reported patient was currently hospitalized since last week. Wife did not provide reason of hospitalization.
Summary of Changes: Event tab got updated.

Follow-up information received on[redacted] 2022. This follow-up was considered significant.
Reporter's Comments:[redacted] 2022 Post infusion report: Patient hospitalized for lung infection[redacted]
Patient on prednisone 5mg[redacted] 2022. New medicine[redacted] 2022 pregabalin 25mg. Patient had 4th dose Covid-19 pfizer vax[redacted] 2022. Patient had appointment with doctor[redacted] 2022. Injection well tolerated. No issues. Patient stable at departure. Patient missed scheduled dose of injection on[redacted] 2022. Patient's current injection[redacted] 2022) outside the 7-day treatment window. Last dose of drug was administered on[redacted] 2022. It was unknown if the reporter considered Lung infection to be related to covid 19 vaccine. No further information provided.
Summary of Changes: Suspect, concomitant, event, narrative.

Follow-up information received on[redacted] 2022. This follow-up was considered significant.
Reporter's Comments: This case was received via Nucala Patient Support Program (Vista). Mepolizumab dose was given every 4 weeks.Patient's wife reported patient currently hospitalized due to lung infection since past 3 weeks. It was unknown if the reporter considered the lung infection, cough, sputum discolored and productive cough to be related to Comirnaty. No further information provided.
Summary of Changes: New Batch number added for Mepolizumab

ATIA - 19(1)

Canada Vigilance AER#:	E2B_05499967 (5)	Page#14

Follow up information received on [redacted]2022. This follow-up was considered significant.
Reporter's Comments: Patient was moved to palliative approach, nucala was to be stopped. No further information provided.
Summary of Changes: Product details updated. Narrative information updated.
Additional supportive information: Mepolizumab drug used by patient was Nucala.

Follow-up information received on [redacted]2022. This follow-up was considered significant.
Reporter's Comments: Case was received by pharmacist via Nucala Patient Support Program (Vista). It was reported that patient was deceased. No further information provided. It was unknown if the reporter considered the unknown cause of death, lung infection, cough, sputum discolored and productive cough to be related to Comirnaty.
Summary of Changes: Product and event details updated.

Follow up information was received on 23 Jan 2023
Reporters comment-This case was received from Health Canada. It was unknown if autopsy was performed. It was unknown if the reporter considered the drug dose administration interval too long to be related to Comirnaty.
Summary of changes-events seriousness added, formulations updated, concomitant added, causality updated

		Unknown	

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP).

An 88-year-old male patient received BNT162b2 (COMIRNATY), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: PNEUMONIA (death, medically significant), outcome "fatal"; THROMBOSIS (medically significant), outcome "unknown", described as "blood clot"; PAIN IN EXTREMITY (non-serious), outcome "unknown", described as "Leg pain". The event "blood clot" required emergency room visit. Therapeutic measures were taken as a result of thrombosis. The date and cause of death for the patient were unknown. It was not reported if an autopsy was performed.

Clinical course: Patient had leg pain. Got the vaccine, went to the hospital and he had a blood clot and he got started on the blood clot medication. Then the doctors said that it was pneumonia, they took him off the medication and he died within 6 hours.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP). The reporter is the parent.

A 17-year-old male patient received BNT162b2 (BNT162B2), on [redacted]021 as dose 1, single (Batch/Lot number: unknown) at the age of 17 years intramuscular, in left deltoid for covid-19 immunisation. The patient's relevant medical history included: "seasonal allergies" (unspecified if ongoing), notes: Onset date: childhood. The patient's concomitant medications were not reported.
The following information was reported: RASH (hospitalization), DARK CIRCLES UNDER EYES (hospitalization) all with onset [redacted]2021, outcome "unknown" and all described as "He went to the hospital on [redacted]with a bad reaction. He had a rash all over his neck and face and brown circles around his eyes"; CARDIOMEGALY (death) with onset [redacted]2021, outcome "fatal", described as "His mother found him dead on the floor next to his bed/ An autopsy showed that his son's heart was "slightly enlarged", but he could not determine with certainty the cause of death"; ARTHRALGIA (hospitalization), outcome "unknown", described as "Sore shoulder". The patient was hospitalized for rash, dark circles under eyes (start date: [redacted]021). Therapeutic measures were not taken as a result of cardiomegaly. The patient date of death was [redacted]2021. Reported cause of death: "His mother found him dead on the floor next to his bed/ An autopsy showed that his son's heart was "slightly enlarged", but he could not determine with certainty the cause of death". The autopsy was performed, and results were not provided.

Clinical course: It was reported that, the patient did not received prior vaccinations. Autopsy results included unascentrained (heart slightly enlarged). The lot number was not available/provided at time of report completion. No any family medical history was reported relevant to AEs. Relevant tests was reported as none. Upon Follow-up (23Jan2023), it was reported that the patient died 33 days after receiving the Pfizer vaccine after being assessed in hospital for a rash, sore shoulder and rings around his eyes. Autopsy determined the cause of his [redacted]2021 death as "unascertained".

Follow-up (26Apr2022): The new information received from a contactable consumer (patient's father) via SPL. Updated information included reporter's contact information, medical history, route of administration, anatomical location, treatment received ticked no for fatal event.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (23Jan2023): This is a spontaneous follow-up report received from a contactable consumer. Updated information included: new reporter added, new event added (Sore shoulder), and clinical information was added.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.
Follow-up (24Feb2023): Follow-up attempts are completed. No further information is expected.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Other HCP and Consumer or other non HCP).

An 84-year-old female patient received BNT162b2 (BNT162B2), as dose 1, single (Batch/Lot number: unknown), as dose 2, single (Batch/Lot number: unknown), as dose 3 (booster), single (Batch/Lot number: unknown) and as dose 4 (booster), single (Batch/Lot number: unknown) at the age of 84 years for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: COVID-19 (medically significant) with onset [redacted]2022, outcome "unknown", described as "Tested positive for covid"; DRUG INEFFECTIVE (medically significant) with onset [redacted]022, outcome "unknown", described as "Vaccination failure"; It was reported that the patient has had both covid vaccines plus two covid boosters. DEATH (death, medically significant) with onset [redacted]2022, outcome "fatal", described as "passed away"; OFF LABEL USE (death, medically significant), IMMUNISATION (death, medically significant), outcome "fatal" and all described as "Dose 4". The patient underwent the following laboratory tests and procedures: SARS-CoV-2 test: [redacted]2022) positive. The patient date of death was [redacted]2022. The reported cause of death was unknown. It was not reported if an autopsy was performed.

Clinical course: The patient's daughter called to cancel the appointment for [redacted]2022 as the patient passed away on [redacted]2022.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Follow-up [redacted]2022): This is a spontaneous follow-up report received from a contactable consumer (Clinic administrative personnel). Updated information: New reporter tab#2 added. Event Death Details in Patient tab updated. New event: Unknown cause of death, booster and off label use added.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Follow-up (07Jul2022): Follow-up attempts are completed. No further information is expected.

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information available a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported events.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP).

A 32-year-old male patient received BNT162b2 (COMIRNATY), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. The following information was reported: CEREBROVASCULAR ACCIDENT (death, medically significant), outcome "fatal", described as "cerebral venous stroke". The patient date of death was unknown. Reported cause of death: "cerebral venous stroke".

Clinical information: Reporter would try to get all his thoughts together as concise as possible but he thought he would take a page from the PRIVACY and start with sharing the story of his friend PRIVACY who would be spending Mother's Day that year without her husband, Dr. PRIVACY who passed away at 32 years old of a cerebral venous stroke resulting in brain stem death following the vaccine. He took the vaccine because he was told that in taking it, he would not be able to catch covid or transmit it to his patients (he worked with children) which we all know is not true. Reporter was going to attach some images there of his two beautiful children and his family (with PRIVACY permission) and they were welcome to also watch a video she put together of his funeral. These were REAL people, they were REAL stories, and they were not getting the support or attention that they deserve. They took the shot, then when they pass, their stories are buried. PRIVACY wanted them to know that she was told for months that this was not the result of the vaccine. She was bullied, told to keep quiet, called crazy and anti vaccine all while trying to navigate the death of her husband and raise TWO CHILDREN ALONE. She also wanted them to see that it was finally being acknowledged in those medical journals after the medical community completely dismissed her! She knew, no one believed her. 'CVT after SARS-CoV-2 vaccination can be the first manifestation of a much more complex and life-threatening disorder, mimicking heparin-induced thrombocytopenia. CVT was not the only manifestation of vaccine-induced immune thrombotic thrombocytopenia, which can also occur with thrombosis in other sites. It was necessary to pay close attention to the most common thrombotic manifestations, such as stroke and myocardial infarction, among subjects with risk factors, because it could not be excluded that some of those cases were adverse effects of the vaccine. A headache, which is also a frequent symptom after vaccination, could be a manifestation of a CVT in a vaccine-induced immune thrombotic thrombocytopenia and a simple platelet count could help rule out this form. Conversely, a thrombocytopenia in patients with thrombotic manifestations of any kind within 4 weeks of vaccination (all cases reported so far have occurred within 24 days of vaccination[8], [9], [10]), should lead to a search for anti-FP4 antibodies.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the consumer via regulatory authority in Canada (Health Canada), concerning a 57 year old male patient of Unknown ethnic origin.

No medical history and concomitant products were reported.

On an unknown date, the patient received unknown dose of Vaxzevria Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for product used for unknown indication.

On an unknown date, the patient experienced my neighbor across the street died of a heart attack less than 24 hours after his astrazeneca vaccine (preferred term: Myocardial infarction), and myocardial infarction (preferred term: Myocardial infarction).

It was unknown if any action was taken with Vaxzevria Vial Contains 10 Doses Of 0.5ml.

On an unspecified date, the patient died from the event of my neighbor across the street died of a heart attack less than 24 hours after his astrazeneca vaccine and myocardial infarction.

An autopsy was not performed. The cause of death was my neighbor across the street died of a heart attack less than 24 hours after his astrazeneca vaccine and myocardial infarction.

The reporter assessed the events my neighbor across the street died of a heart attack less than 24 hours after his astrazeneca vaccine and myocardial infarction to be serious due to seriousness criteria of death and important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Corrected report on 24-May-2022: Country of case and country of reporter changed to Canada from France. Narrative amended

Summary of follow up information received by AstraZeneca/MedImmune on 10-Oct-2022 from consumer via spontaneous source: new event myocardial infarction added, new reference reporters and new RA reporter added, suspect verbatim updated from ASTRAZENECA VACCINE (UNIDENTIFIED ASTRAZENECA PRODUCT) to VAXZEVRIA VIAL CONTAINS 10 DOSES OF 0.5ML, identified duplicates and added associated case IDs added, Narrative amended.CAUSE OF DEATH: MY NEIGHBOR ACROSS THE STREET DIED OF A HEART ATTACK LESS THAN 24 HOURS AFTER HIS ASTRAZENECA VACCINE CAUSE OF DEATH: MYOCARDIAL INFARCTION
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Myocardial infarction [reported twice as MY NEIGHBOR ACROSS THE STREET DIED OF A HEART ATTACK LESS THAN 24 HOURS AFTER HIS ASTRAZENECA VACCINE and MYOCARDIAL INFARCTION) is not listed in the company core data sheet of AZD1222. Cause of death was reported as My neighbor across the street died of a heart attack less than 24 hours after his astrazeneca vaccine and myocardial infarction. Due to limited information on relevant medical and family history, date of vaccination, event onset date, concomitant medications, autopsy details, possible risk factors (high blood pressure, smoking, stress, physical inactivity), detailed diagnostic and etiologic workup (physical examination and cardiac workup including imaging studies), the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from medical information team.

A male patient received BNT162b2 (COMIRNATY), as dose 3 (booster), single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (DOSE 1; MANUFACTURER UNKNOWN), for Covid-19 immunisation; Covid-19 vaccine (DOSE 2; MANUFACTURER UNKNOWN), for Covid-19 immunisation.
The following information was reported: CEREBROVASCULAR ACCIDENT (death, medically significant), outcome "fatal", described as "stroke". The patient date of death was unknown. Reported cause of death: "stroke". It was not reported if an autopsy was performed. Clinical course: Reporter was unvaccinated and perfectly healthy for the last past 2 years. Reporter's brother-in-law was vaccinated and he got quiet sick for a week. His family that was living with him are all unvaccinated. They were fine. Their neighbors all got Covid and they all had their COVID Vaccine. She know in assisting home care. the employees have informed her after the third shot all the seniors are sick, with heart problems and clots. They reported 10 deaths in the last months. Why hasn't it stopped. Pfizer vaccine doesn't work. In reporter's family she had 3 deaths, one from a health attack, the second one from a clot and the third one from a stroke, they had in common they all had the booster dose. One of them was 30 years old. Reporter asking Pfizer just release their safety data full of 9 pages. Why did they not release it earlier. The data was available since February 2021. They also said they will take 75 years to release the safety data. She want to know why. It says in your document, 12 223 deaths have occurred in 3 months. That's insane. She stated Pfizer are participating in a genocide. It says on the 18 000 long pages long document to not administer the vaccine to pregnant and breastfeeding women. Why Pfizer are recommending it to pregnant women. Pfizer guys are jabbing babies and kids. Why was there no transparency. Why did Pfizer guys hide the safety data from them. Does Pfizer understand how serious this was. This was crime against humanity. She told Pfizer know what Pfizer are participating in. Pfizer will be punished by death. There was serious punishment. All the doctors, nurses will get caught. Kids are getting myocarditis and hepatitis from Pfizer vaccine. Seniors have clots and strokes. She still can't fly because I'm not vaccinated. Covid has 99.67 % survival rate. Reporter's friend was better in less then a week. The little pill was also hurting people. Caller didn't specify if she was referring to Paxlovid. Caller sister works in a hospital and she seen the number of mischarges skyrocketed. Pfizer vaccine doesn't work.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP). The reporter is the patient.

A 70-year-old female patient received BNT162b2 (BNT162B2), on [redacted]2021 at 14:00 as dose 2, single (Batch/Lot number: unknown) at the age of 70 years for covid-19 immunisation. The patient's relevant medical history included: "She had C-Difficile that was it but was of healthy weight and hydrated." (unspecified if ongoing). The patient's concomitant medications were not reported. Vaccination history included: BNT162b2 (Dose Number: 1, Batch/Lot No: Unknown, Unable to locate or read the details, Vaccine Administration Time: 02:00 PM), administration date: [redacted]2021.
The following information was reported: DEATH (death, medically significant) with onset [redacted]2021, outcome "fatal", described as "died"; CLOSTRIDIUM DIFFICILE INFECTION (medically significant), outcome "not recovered", described as "C-Difficile". Therapeutic measures were not taken as a result of death. Therapeutic measures were taken as a result of clostridium difficile infection. The patient date of death was [redacted]2021. The reported cause of death was unknown. It was not reported if an autopsy was performed. Clinical course: The patient was not received any other vaccines within 4 weeks prior to the COVID vaccine. Patient was not diagnosed with COVID-19 , Prior to vaccination. Since the vaccination the patient was not tested for COVID-19. It was not reported if an autopsy was performed.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Follow-up (22Jun2022): Follow-up attempts are completed. No further information is expected.

Subject: Health Canada Follow-Up Clarification Request

EXTERNAL

Good afternoon,

Re: Health Canada Follow-Up Clarification Request

We are contacting you today regarding an adverse event following immunization (AEFI) report submitted on your behalf to the Canada Vigilance Program on February 16, 2021.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified that clarification is required for this individual case safety report (ICSR) in order to complete the case evaluation.

Organization File No.	Canada Vigilance Case Number	Clarification Requested
[redacted]	000939409	Would you kindly have any information of the following: o At the time of the report, it is mentioned that the patient was placed on End of Life and Comfort Care. The outcome at the time of reporting was reported as "Not Recovered". Would you have any information regarding the final outcome for this patient? o If the AEFI resulted in a fatal outcome, could you please provide date of death. Any additional information that you might have would be most appreciated.

May you please kindly respond to both myself, Michelle Séguin: michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Or, if you prefer, you may either fax the requested information to the Canada Vigilance Program fax at 1-866-678-6789 or via sFTP (secure file transfer protocol) as you did for the initial case; please cite the Canada Vigilance **case number 000939409** if replying by either means.

If you require further information within the scope of this request, please do not hesitate to contact me.
Sincerely,

Michelle Séguin on behalf of:
The Canada Vigilance Program

Supplementary Information Comments

202[redacted]08:45[redacted]

[redacted] 2020 CDC [redacted] spoke to [redacted] who had filled out the AEFI for: [redacted] Medical HX: Include COPD and hx of MI prior to coming to [redacted] 2018 Allergy to Codeine Resident was on Comfort Care No previous dx of Covid No hx of contact to Covid Case No hx of anaphylaxis noted to other immunizations or other meds that [redacted] was aware of during clients stay since 2018 [redacted] was immunized on [redacted] per phims entry. Prior to immunization resident per [redacted] had no reports of concern Vitals day of immunization [redacted] 2021: Temp 36.1 Pulse 75 Resp 18 B/P 126/71 Post immunizations standard dose of Tylenol ordered for all residents 500mg. (dose given at [redacted] 2021) No concerns on evening or night shift vitals stable. On [redacted] 2021 approximately between [redacted] erythema noted to left chest and stridor noted when resident moved to chair. They moved resident back to bed. Nurse Practitioner happened to be on unit [redacted] and ordered epinephrine 0.3ml administered x1 and Benadryl 1 mg at [redacted] Vitals Post epinephrine and Benadryl: Temp 36.7 HR 125 Resp 28 B/P 118/58 O2 sat 85% O2 administered at 2L stat increased to 91% NP indicated that Resident was tachypnea/tachycardia/ no response to verbal stimuli, tactile response yes squeezed hand, no cyanosis noted ? delayed reaction ? pneumatic process ? COPD End of life Care ordered at [redacted] 2020 [redacted] Standard End of Life Care medication was ordered: Morphine (given at [redacted] 2021 at [redacted] 2.50mg Hydromorphone given [redacted] 2021 at [redacted] 0.25mg Scopolamine administered [redacted] 2021 at [redacted] 0.6mg The symptoms of stridor resolved in 1 hour. Erythema was gone by afternoon. Unsure if EOL care helped resolve [redacted] passed away [redacted] 2021 at [redacted] Case to be reviewed by MOH [redacted] [redacted] RN.BN. PNC (c) Communicable Disease Coordinator- Covid19

[redacted] 14:47 CST

[redacted] 2021 MOH call to attending Physician [redacted] and Nursing staff [redacted] at time of event Attending physician was not present. The cause of death is old age. She is unable to comment on the association with the vaccine or not but the presentation was different from the patients baseline. Pt had multiple medical problems but was stable. There is no plan for an autopsy to be done Nursing staff clarified the rapid progression of symptoms The rash was localized to the chest area and there was no rash at injection site. The respiratory symptoms progressed from audible wheeze to stridor, as pt was using accessory muscles of respiration. - [redacted]

Health Canada / Santé Canada [redacted]

Canada Vigilance Adverse Reaction Reporting Form

Report of suspected adverse reactions to marketed health products in Canada

See instructions and information on adverse reaction reporting and confidentiality on Page 2.
Complete all mandatory items, marked by a *, and provide as much information as possible for the remaining items. PROTECTED WHEN COMPLETED - B"

A. Patient Information

1. Identifier [redacted]

2. Age	3. Sex*	4. Height	5. Weight
☒ Years 89 ☐ Months	☐ Male ☒ Female	165 cm last	62 kg lbs

B. Adverse Reaction

1. Outcome attributed to adverse reaction (Select all that apply)

- ☒ Death: 2021[redacted] (yyyy-mm-dd)
- ☐ Life-threatening
- ☐ Hospitalization
- ☐ Hospitalization – prolonged
- ☐ Disability
- ☐ Congenital malformation
- ☐ Required intervention to prevent damage/impairment
- ☒ Other:

2. Reaction date (yyyy-mm-dd): 2021[redacted]

3. Report date (yyyy-mm-dd): 202[redacted]

4. Describe reaction or problem*

This elderly frail woman has been in a significant state of decline. She was wheel chair bound and needed assistance with all personal care and feeding. On the day of her covid vaccination she seemed more congested than usual. After her immunization in the early afternoon she seemed to have no ill effect and she remained well over the remainder of the afternoon. She was fed her supper but then became diaphoretic and dusky then collapsed and was unresponsive. She was pronounced on scene.
I was contacted as coroner to review. Given the history of a vaccination early in the day the case was reviewed with the regional coroner and deputy chief coroner. With her advanced state of decline and family aware of her pending mortality we elected to not proceed to an autopsy in this case.

5. Relevant tests/laboratory data (including dates (yyyy-mm-dd))

hx Major Depression with ECT, Dementia, hypertension
Carotid Atherosclerosis, Hypothyroid

6. Relevant history and pre-existing medical conditions (e.g. allergies, pregnancy, smoking/alcohol use, hepatic/renal dysfunction)

amlodipino 2.5 mg 1 time daily
Eltroxin 100 mcg 1 tablet 1 time daily every day now 16/01/2016
divalproex sodium 250 mg 2 in am , one in evening
trazodone 50 mg 1 tablet every day at bedtime, PRN
Effexor XR 150 mg 1 time daily

Septra De-> hives

C. Suspected Health Product(s)

1. Name*, strength and manufacturer (if known)

#1 Moderna COVID 19 vaccine

#2

2. Dose, frequency and route used

#1	#2
0.5 cc once IM	

3. Therapy dates (or duration)

#1 From (yyyy-mm-dd) - To (yyyy-mm-dd)	#2 From (yyyy-mm-dd) - To (yyyy-mm-dd)
202[redacted] to	to

4. Indication for use

#1	#2
COVID 19	

5. Reaction abated after use stopped or dose reduced

#1	#2
☐ Yes ☐ No ☒ Does not apply	☐ Yes ☐ No ☐ Does not apply

6. Lot #

#1	#2
not known by myself	

7. Expiration

#1 (yyyy-mm-dd)	#2 (yyyy-mm-dd)

8. Reaction reappeared after reintroduction

#1	#2
☒ Yes ☐ No ☐ Does not apply	☐ Yes ☐ No ☐ Does not apply

9. Concomitant health products, excluding treatment of reaction (name, dose, frequency, route used and therapy dates (yyyy-mm-dd))

10. Treatment of reaction, including dates (yyyy-mm-dd)

D. Reporter Information

1. Name*, occupation, address, telephone number* [redacted]

2. Health professional?	3. Reported to manufacturer?
☒ Yes ☐ No	☐ Yes ☒ No

* As per the Treasury Board of Canada Secretariat Government Security Policy

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from medical information team.

A male patient received BNT162b2 (COMIRNATY), as dose 3 (booster), single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. The following information was reported: THROMBOSIS |death, medically significant), outcome "fatal", described as "clot". The patient date of death was unknown. Reported cause of death: "clot". It was not reported if an autopsy was performed.

Response: Caller then start using abusive language. Reporter have explained she needs to remain respectful. After constantly saying rot in hell, Reporter had decided to disconnect the line as she would not stop yelling over the phone. Multiple attempted were made to provide her resourceful information, but caller would not stop talking. Reporter had tried placing her on hold but she would start a different conversation. She did not have any particular question beside why dont you stop selling Pfizer COVID-19 vaccine.

For Canadian Callers: The health and safety of our Pfizer colleagues has always been and remains our main priority. Pfizer knows firsthand the important role vaccinations play for society and we feel strongly that we must set an example for others to follow. We have strongly recommended that all Canadian colleagues be vaccinated, and even set up our own vaccination clinics to provide vaccines to our employees and their families. The majority of Pfizer employees in Canada have done their part to remain safe and help stop the COVID-19 spread by getting COVID-19 vaccinations. While we have not mandated or required our employees to vaccinate, we will continue to encourage vaccination in our employee population.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP). The reporter is the patient.

A 79-year-old female patient (unknown if pregnant) received BNT162b2 (COMIRNATY), on [redacted]2022 as dose 4 (booster), single (Lot number: fn7934) at the age of 79 years, in left arm for covid-19 immunisation. The patient's relevant medical history included: "Pulmonary fibrosis" (unspecified if ongoing); "MS" (unspecified if ongoing); "Celiac" (unspecified if ongoing). The patient's concomitant medications were not reported. Vaccination history included: comirnaty (DOSE 3 (BOOSTER), SINGLE , Batch/Lot No: ff2595, Location of injection: Arm Left), administration date: [redacted]021, for COVID-19 Immunisation; BNT162b2 (DOSE 2, SINGLE, Batch/Lot No: ew0221, Location of injection: Arm Left), administration date: 06Jun2021, for COVID-19 Immunisation; BNT162b2 (DOSE 1, SINGLE, Batch/Lot No: EP6017, Location of injection: Arm Left), administration date: [redacted]2021, for COVID-19 Immunisation.
The following information was reported: OFF LABEL USE (medically significant), IMMUNISATION (medically significant) all with onset [redacted]2022, outcome "unknown" and all described as "Dose Number 4"; DYSPNOEA (hospitalization) with onset [redacted]2022, outcome "unknown", described as "Laboured breathing"; THROMBOSIS (prolonged hospitalization, life threatening,medically significant) with onset [redacted]2022, outcome "unknown", described as "blood clots in lungs"; DEATH (death, medically significant) with onset [redacted]2022, outcome "fatal", described as "Death 9 days after dose". The patient was hospitalized for dyspnoea (start date: [redacted]022, hospitalization duration: 5 day(s)); the patient prolonged hospitalization for thrombosis (start date: [redacted]022, hospitalization duration: 5 day(s)). The events "blood clots in lungs" and "laboured breathing" required physician office visit and emergency room visit. Therapeutic measures were taken as a result of death, thrombosis. The patient date of death was [redacted]2022. The reported cause of death was unknown. It was not reported if an autopsy was performed. The patient did not received any other vaccines within four weeks prior to the covid vaccine. Treatment received for the adverse event was blood thinner. The patient was not diagnosed with covid-19 prior to vaccination. The patient was not tested for covid-19 since the vaccination.

Summary (B.5)

Case narrative (B.5.1)

This solicited report received from a health care professional via [redacted]BioAdvance REMICADE SIMPONI STELARA IMBRUVICA ZYTIGA TREMFYA ERLEADA EPREX BALVERSA concerned a 90 year old male (patient number[redacted] (local case ID#[redacted]
The patient's height, and weight were not reported. The patient's past medical history included: kidney disease, and renal failure, and concurrent conditions included: ankylosing spondyloarthritis, and other pre-existing medical conditions included: no known allergies.
The patient received combination product golimumab (solution for injection in pre-filled pen, subcutaneous, batch number: UNKNOWN) 50 mg, 1 time every 1 months from [redacted]2019 to [redacted]2022 for ankylosing spondyloarthritis. Product constituent parts included smartject (route of admin, lot, serial number, model number, UDI number, and expiration were not reported). Non-company suspect drugs included: tozinameran (form of admin, route of admin, and batch number were not reported) dose, frequency, and therapy dates were not reported for prophylaxis. The batch number was not reported and has been requested. Concomitant medications included amlodipine.
Patient reported starting to have symptoms in early April, headache, sore throat, fever, diarrhea. After a few days, shortness of breath and cough, at-home Covid test positive on[redacted]2022, patient reported never having been so sick in his life. He had his 4th Pfizer Covid vaccine[redacted]MAR-2022. He told that fortunately his cardiologist had increased his dose of amlodipine from 5 mg to 10 mg a day, because before he would have had chest pain as well, which was not the case. He told that he had a nuclear test, he couldn't remember when, which showed at least one blocked artery. He was offered an angiogram to insert a stent or increase the amlodipine dose; he opted for the second option. Laboratory data included: COVID-19 virus test (NR: not provided) positive. Upon follow up reporter received a call from the patient's wife. The patient went to hospital by ambulance on[redacted]2022. He had retrosternal pain and shortness of breath. He was admitted to the cardiac intensive care unit. The patient refused to be treated. He was fully conscious. On[redacted]2022, retrosternal pain again, which was constant. He died surrounded by his family. On[redacted]2022, the patient died from COVID-19 infection. It was unknown if an autopsy was performed.
The action taken with golimumab was not changed for blocked artery and not applicable for COVID-19 infection. The action taken with tozinameran was not applicable for COVID-19 infection and not reported for blocked artery.
The outcome of the blocked artery was not reported.
The reporter considered the causality between golimumab, and covid-19 infection as not related. The reporter did not provide a causality assessment between golimumab, and blocked artery; Company causality between golimumab, and covid-19 infection was related, and between golimumab, and blocked artery was not related.
This report was serious (Death, and Hospitalization Caused / Prolonged).

Case was reassessed as serious based on additional information was received from health care professional on [redacted]2022. The following information was updated and incorporated into the case narrative: cause of death (COVID-19 infection), past medical history(renal failure), COVID-19 infection event onset date, seriousness criteria, outcome, date of death, therapy end date, action taken for COVID-19 infection changed from dosage maintained to not applicable, reporter causality (COVID-19 infection), lab data(angiogram), narrative information.

		Fatal	

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a health professional via the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) concerning a male patient of Unknown ethnic origin (age 81 years).

No medical history was reported.

No concomitant products were reported.

On an unknown date, the patient received Vaxzevria Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadoxl ncov-19)) (batch number Unknown), via intramuscular route, for covid-19 prophylaxis. On an unknown date, the patient received Covid-19 Vaccine (covid-19 vaccine nrvv ad (chadoxl ncov-19)), total, via intramuscular route, for covid-19 immunisation.

On an unknown date, the patient started treatment with Stelara (ustekinumab) 90 mg, subcutaneous, for crohn's disease.

On an unknown date, the patient experienced pneumonia (preferred term: Pneumonia), rash pruritic (preferred term: Rash pruritic), musculoskeletal discomfort (preferred term: Musculoskeletal discomfort), arthralgia (preferred term: Arthralgia) and death (preferred term: Death).

It was unknown if any action was taken with Vaxzevria Vial Contains 10 Doses Of 0.5ml, Covid-19 Vaccine and Stelara.

On an unspecified date, the patient died.

It was not known whether an autopsy was performed. The cause of death was death, musculoskeletal discomfort, rash pruritic, pneumonia and arthralgia.

The reporter assessed the events of death, musculoskeletal discomfort, rash pruritic, pneumonia and arthralgia to be serious due to seriousness criteria of death, hospitalization and important medical event.

For regulatory reporting purposes, if an event was spontaneously reported, at least a reasonable possibility of a causal relationship was implied by the reporter, even if the relationship was unknown or unstated.

Summary of follow-up information received by AstraZeneca/MedImmune on 10-Oct-2022 from health professional via Spontaneous Source: Duplicate case found, Associate case Id added, New reference reporters added, reporter tab update, Suspect verbatim updated from Covid-19 vaccine astrazeneca to vaxzevria vial contains 10 doses of 0.5ml, new suspect covid-19 vaccine added, narrative amended.CAUSE OF DEATH: DEATH CAUSE OF DEATH: MUSCULOSKELETAL DISCOMFORT CAUSE OF DEATH: RASH PRURITIC CAUSE OF DEATH: PNEUMONIA CAUSE OF DEATH: ARTHRALGIA PNEUMONIA - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes RASH PRURITIC - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes DEATH - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes MUSCULOSKELETAL DISCOMFORT - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes ARTHRALGIA - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case report concerns 81 years old male vaccinee with reported fatal outcome (Preferred term: Death) in association with AZD1222. Fatal events of musculoskeletal discomfort, rash pruritic, pneumonia and arthralgia are not listed in the company core data sheet of AZD1222. Arthralgia and rash pruritic are listed adverse events for AZD1222, however as the events are reported with seriousness criteria of death, they are considered unlisted. The cause of death was reported as death, musculoskeletal discomfort, rash pruritic, pneumonia and arthralgia. Cosuspect ustekinumab could be considered as the confounding factor for pneumonia and arthralgia. Elderly age of the vaccinee could be considered as a risk factor for death. Due to limited information on details and circumstances surrounding the events, relevant medical history, concomitant medications, date of vaccination, event onset date, detailed diagnostic and etiologic workup, autopsy details, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

☐ Autre professionnel de la santé (spécifier) : ___

9. Cela a-t-il été déclaré au fabricant?

☐ Oui ☑ Non

C) Effet secondaire

1. Niveau de sévérité de l'effet secondaire

☑ Décès (fournir la date) [redacted] 21
☐ Met la vie en danger
☐ Hospitalisation
☐ Prolongation d'une hospitalisation
☐ Incapacité
☐ Malformation congénitale
☐ Besoin d'une intervention médicale

2. Rétablissement suite à l'effet secondaire*

☐ Oui ☐ Non ☐ Inconnu

☐ En cours de rétablissement (expliquer) : ___

3. Date du début de l'effet secondaire* (aaaa-mm-jj)	4. Date de la fin de l'effet secondaire (aaaa-mm-jj)
2021-[redacted]	—

5. Décrire l'effet secondaire (ligne de temps, traitement, etc.)*

décès subit.
n'avait pas présenté d'effets secondaires lors 2e injection
1re injection réaction mineure 3e d'injection

D) Produit de santé soupçonné

1. Nom du produit*	2. Concentration	3. Fabricant
PB COVID19	code 208	Pfizer biontech

4. N° du lot	5. N° du DIN / N° du NPN
FA9091	

6. Pays d'achat	7. Où le produit a-t-il été acheté/obtenu?
☑ Canada ☐ États-Unis ☐ Autre (spécifier) : ___	☐ Pharmacie ☐ Épicerie ☐ Internet ☑ Autre (spécifier) centre de vaccination santé publique

8. Date du début du traitement (aaaa-mm-jj)*	9. Date de la fin du traitement (aaaa-mm-jj)
2021-06-28	—

Aux environs de l'apparition de l'effet secondaire, spécifier :

10. Posologie (concentration, quantité)	11. Fréquence (p. ex. 2 fois par jour)	12. Voie d'administration du produit (p. ex. voie orale)
2e dose.	—	IM.

13. Pourquoi le produit a-t-il été pris/prescrit?*

Prévention COVID.

14. Est-ce que l'utilisation du produit a cessé suite à l'apparition de l'effet secondaire?	15. Si l'utilisation du produit a cessé, l'effet secondaire s'est-il arrêté?
☐ Oui ☐ Non N/A.	☐ Oui ☐ Non ☑ Ne s'applique pas

16. Est-ce que l'utilisation du produit a recommencé suite à l'arrêt de l'effet secondaire?	17. Si l'utilisation a été recommencée, l'effet secondaire s'est-il reproduit?
☐ Oui ☐ Non ☑ Ne s'applique pas	☐ Oui ☐ Non ☑ Ne s'applique pas

18. Probabilité que le produit ait causé l'effet secondaire

☐ Certain
☐ Probablement/vraisemblablement
☐ Possiblement
☐ Pas disponible / incapable de vérifier
☑ Improbable très improbable.
☐ Sans rapport

19. Autres produits de santé consommés aux environs de l'apparition de l'effet secondaire, excluant le traitement (temps d'utilisation, ligne de temps, etc.)

∅

20. Tests/données de laboratoire pertinents

∅

		Fatal

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from a contactable reporter(s) (Other HCP) from Regulatory Authority. Regulatory number: E2B_05139181 (Health Canada).

An 81-year-old male patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) intramuscular for covid-19 immunisation; ustekinumab (STELARA), (Batch/Lot number: unknown) at 90 mg, subcutaneous for crohn's disease. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: ARTHRALGIA (death, hospitalization), outcome "fatal"; DEATH (death, hospitalization, medically significant), outcome "fatal"; MUSCULOSKELETAL DISCOMFORT (death, hospitalization), outcome "fatal"; PNEUMONIA (death, hospitalization, medically significant), outcome "fatal"; RASH PRURITIC (death, hospitalization), outcome "fatal". The date and cause of death for the patient were unknown. It was not reported if an autopsy was performed.

The reporter's assessment of the causal relationship of "arthralgia", "death", "musculoskeletal discomfort", "pneumonia" and "rash pruritic" with the suspect product(s) COVID-19 Vaccine - Manufacturer Unknown was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information in the case report, a possible causal relationship between the reported events and the suspect drug BNT162B2 cannot be completely excluded.

The impact of this report on the benefit/risk profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Dosage text (B.4.k.6)		
UNK, every 9 days		
Pharmaceutical form (B.4.k.7)	**Route of administration (B.4.k.8)**	**Parent route of admin (B.4.k.9)**
	Unknown	
Gestation period (B.4.k.10)	**MedDRA version (B.4.k.11a)**	**Indication (B.4.k.11b)**
	26.0	Paroxysmal nocturnal haemoglobinuria
Start date of drug (B.4.k.12)	**Drug end date (B.4.k.14)**	
20220502 CCYYMMDD	20121025 CCYYMMDD	
Start period (B.4.k.13.1)	**Last period (B.4.k.13.2)**	**Duration of drug Admin (B. 4.k.15)**
		22 Days
Action(s) taken with drug (B.4.k.16)	**Did reaction recur on readministration? (B.4.k.17.1)**	
Additional info (B.4.k.19)		
Drug Recurrence (B.4.k.17)		
MedDRA version (B.4.k.17.2a)	**Which reaction(s)/event(s) recurred? (B.4.k.17.2b)**	
Drug Reaction relatedness (B.4.k.18)		
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Abdominal discomfort	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
PHARMACEUTICAL COMPANY	Global Introspection	Not Related

Summary (B.5)

Case narrative (B.5.1)

This solicited case from Canada was reported by a consumer(patient) on 20-Apr-2022 and by a physician on 22-Apr-2022 (combined report) and by a nurse on 11-May-2022 (combined report), 25-May-2022, 26-May-2022 and 27-May-2022 (combined report) by a consumer (patient) and physician, by a nurse on [redacted]2022 and by the patient and nurse via company representative on [redacted]2022, [redacted]2022, [redacted]2022 and follow-up was received on [redacted]2022, [redacted]2022 (DCF response) (combined report) and [redacted]2022 from the physician and concerns a 63-year-old female patient (patient ID: [redacted]. The patient was enrolled in [redacted](Soliris), Innomar Soliris Patient Support Program.

Medical history/concurrent conditions included aplastic anemia, mitral valve prolapse, and tonsillectomy. Concomitant medications included zopiclone and ergocalciferol. Vaccination history included Bexsero, Menactra, and Neisseria Meningitis vaccine for serotype B. The patient's allergies included allergies to nuts and cats.

On 04-Oct-2012, the patient-initiated treatment with eculizumab (Soliris) at a dose of 600mg, every week, intravenously for the treatment of the paroxysmal nocturnal haemoglobinuria (PNH) until 25-Oct-2012. On 02-Nov-2012, the patient initiated a maintenance dose of 900mg, intravenous, every two weeks. The most recent dose of eculizumab administered prior to the onset of the event was not reported. The patient had a history of shingles (HERPES ZOSTER) since Feb-2020. The patient had repeated CT scans done on 15-Dec-2021 which demonstrated a new lytic area in T11 which was indicative of some degenerative changes and it demonstrated some cysts on the chest wall (CHEST WALL CYST) which have been known to the patient. She stated that last June she had her left ankle and foot swollen and then a few months after that she had a left elbow swelling. In November and December of last year (2021), she had some right elbow swelling and currently, she had some right foot and ankle swelling. The joint

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

swelling tends to last for a couple of months and then usually goes away, and then she had a recurrence in other joints as described. She reported that when this happens, she finds it very hard to put shoes on over the affected ankles and the joint feels rather stiff and jelly-like. She was not feeling febrile at the time, and the joint was never hot to touch. She had consulted with her family doctor at one point and never had a joint aspirate. It was suggested that the joint swelling may be related to her COVID vaccine, as she had his second shot on 31-May-2021 before one of the joints swelled up, and had her booster on 02-Nov-2021 just before his right elbow acted up. The patient didn't have any calf swelling so there was no sign of DVT. The patient's last blood work was done on 14-Jan-2022, which indicated hemoglobin as 100 g/l (Ref: 115-165 g/l), white blood count 4.2 x 10^9/ L (Ref: 4-11 X10^9/L), and platelets 125 x 10^9/l (Ref: 150-400 x 10^9 /L), creatinine was 85 (Ref: 44-106 umol/l), and her paraprotein was down to 18 g/l now, which was interesting as it had come down from 22 as earlier it was 26 g/l in 2021. The patient's free light chain ratio was 0.06 which was stable from the previous. The patient was having some abdominal discomfort on and off (ABDOMINAL DISCOMFORT) since Jan-2022. In Mar-2022 (four weeks ago), due to abdominal discomfort, the patient had magnetic resonance imaging (MRI)) that showed a mass in her uterus, ovaries, and lymph nodes. The clinical signs and symptoms of ovarian mass, uterine mass, and abdominal discomfort included ovarian cancer (OVARIAN CANCER METASTATIC). The most recent dose of eculizumab was administered on 06-Apr-2022. The batch/lot number was 1001580, and 1001935 and the expiry date was 31-Mar-2023 and 31-May-2023. The sample for flow cytometry was taken on 18-Apr-2022 and the report came on 22-Apr-2022, the flow cytometry analysis indicated a large population of GPI-dependent RSC, granulocytes, and WBC which was consistent with the previous diagnosis of PNH. By comparison with the previous analysis which was done on 08-Nov-2021, the size of PNH clones was found to be similar. Any difference between the size of WBC and RBC clones may be due to hemolysis of clones or prior RBC transfusions. The flow cytometry analysis results were CD 15+ neutrophils 96.2 %, CD64+ monocytes 97.8 %, type 3 RBCs 54.40%, type 2 RBCs 6.30%, total GPI-deficient RBCs 60.7%. The patient received eculizumab on 02-May-2022 and the patient received her next infusion on 11-May-2022, 9 days after the last infusion, the prescribed infusions were every 14 days but the treating physician requested the patient to be infused earlier (OFF LABEL USE). The most recent dose of eculizumab administered before the onset of the events was on 11-May-2022. The batch/lot number was 1001935 and the expiry date was 31-May-2023. The patient reported that she would be going for surgery on 12-May-2022 for a total hysterectomy. A biopsy would be done at the time of surgery. The patient had surgery on 12-May-2022 to remove a cancerous tumor from her abdomen (previously reported). The patient was admitted to the hospital five days post-surgery from 12-May-2022 to 16-May-2022. She stated that she had a large mass (tumor) on the ovary adhering to the abdominal wall, bowels, appendix, bladder, and uterus. She added that she received two units of transfusion, one during surgery and one post-surgery due to low hemoglobin levels (HAEMOGLOBIN DECREASED), as a result of operative bleeding (PROCEDURAL HAEMORRHAGE). A total hysterectomy was completed and the surgeons removed as much of the tumor as possible before abandoning the surgery due to low hemoglobin. She had an occasional GERO (GASTROOESOPHAGEAL REFLUX DISEASE), and resection of hyper-neoplastic nevus (MELANOCYTIC NAEVUS). She also had some slight drifting down of hemoglobin (previously reported), and the paraprotein has unusually come down a little bit. The patient noticed in the past few months that she had some migrating joint swelling (JOINT SWELLING). The patient also had abnormal laboratory values (LABORATORY TEST ABNORMAL). On 12-May-2022, neutrophils 0.67 x 10^9/ L (Ref: 2-7.50 x 10^9 /L), on 13-May-2022 0.87 x 10^9/ L (Ref: 2-7.50 x 10^9 /L, on 14-May-2022 1.04x 10^9/ L (Ref: 2-7.50 x 10^9 /L), on 15-May-2022 0.83 x 10^9/ L (Ref: 2-7.50 x 10^9 /L), on 16-May-2022 0.83 x 10^9/ L (Ref: 2-7.50 x 10^9 /L), on 23-May-2022 1.85 x 10^9/L). On 23-May-2022, WBC count 2.8 x 10^9/L (Ref: 4-11 X10^9/L), RBC count 2.76/L (Ref: 3.5-5.5/L), lymphocytes 0.60 x 10^9/L (Ref: 1-4 x 10^9/L), monocytes 0.28 x 10^9/ L (0.3-0.8 x 10^9/ L). On 08-Nov-2021, LDH 233 u/l (Ref: 100-250 u/l), on 18-Apr-2022 331 /l (Ref: 100-250 u/l), on 12-May-2022 251 u/l (Ref: 100-250 u/l), on 14-May-2022 303 u/l (Ref: 100-250 u/l), on 14-May-2021 304 u/l (Ref: 100-250 u/l), on 15-May-2022 286 u/l (Ref: 100-250 u/l) and on 16-May-2022 277 u/l (Ref: 100-250 u/l). On 23-May-2022, albumin was 0.30 g/l, hematocrit 0.282%, haemoglobin 86 g/l (Ref: 115-165 g/l), mean corpuscular volume 102.2 fl (78-96 fl), red blood distribution width 15.5 % (Ref: 10-14.5%). On 24-May-2022, the patient went back to the emergency room due to blood present in her urines (BLOOD URINE PRESENT). The patient was assessed and infection was ruled out it was concluded that the bleeding was a result of extensive work done to the bladder during the surgical procedure. No further information was provided. The most recent dose of eculizumab administered before the onset of the events was on [redacted] 2022. The batch/lot number was 1002088 and the expiry date was 31-Mar-2024. The patient was diagnosed with Stage 4 cancer (previously reported) and is scheduled for radiation to target lymph nodes in the neck and abdomen, starting on [redacted] 2022. The patient had an appointment with the treating physician tomorrow and was also associated with the palliative care team for cancer and symptoms management. She had been lethargic (LETHARGY) and is also slightly jaundiced with yellowing skin and sclera (JAUNDICE). The patient had nausea (NAUSEA) and dark urines (CHROMATURIA). These symptoms are suspected to be related to the mass in her abdomen due to a cancer diagnosis. The most recent dose of eculizumab was administered on [redacted] 2022. The patient reported that he had four transfusions two weeks ago because of jaundice (previously reported), which was reported on [redacted] 2022. The patient was advised to go to the hospital and received transfusions due to blood in the urine (previously reported) secondary to stage 4 cancer (previously reported) it was unknown exactly where that bleeding was from. The patient also received five rounds of radiation from [redacted] 2022 to [redacted] 2022 on the left clavicle and abdomen. No further treatment was required. The events of mass, and uterine mass were upgraded to serious based on medical judgment since the events possibly required hospitalization and were possibly related to ovarian cancer. The most recent dose of eculizumab administered before the onset of the events was on [redacted] 2022. The batch/lot number was 1002194 and the expiry date was 30-Sep-2023. The most recent dose of eculizumab administered before the onset of the events was on [redacted] 2022. On [redacted] 2022 the infusion nurse reported the following blood pressure readings, pre-infusion (15:42) was 83/55 mmHg and end of infusion (16:34) was 85/56 mmHg, the patient's blood pressure was low (BLOOD PRESSURE DECREASED). The patient has been sleeping for 22 hours a day on an unspecifiefd date in 2022 with a Palliative Performance Scale score of 20% and was declining. The physician reported the diagnosis or clinical signs and symptoms are cancer related fatigue. The patient was diagnosed with stage 4 bowel cancer (GASTROINTESTINAL CANCER METASTATIC) with metastasis to the bladder, lymph nodes, liver, and multiple organs. The patient still wanted the infusion on [redacted] 2022 which will be her last appointment and the patient has chosen the date of [redacted] 2022 for medical assistance in dying (MAID), the palliative doctor will go into the patient's home to perform the procedure. The physician reported that the patient discontinued therapy as she received medical assistance and died on [redacted] 2022. Therefore, the patient deceased on [redacted] 2022. The cause of death was ovarian cancer. Upon follow-up, the physician reported that it was incorrect the patient has ovarian cancer, in lymph nodes, and metastasis to the bladder was not caused by eculizumab. Related to radiation and surgery. The diagnosis for the low blood pressure was reported as unknown. The seriousness of the events of procedural haemorrhage, ovarian cancer, death, and stage 4 bowel cancer was assessed as serious (medically significant) by Alexion as these events were included in the Important Medical Events list. No action was taken with eculizumab in response to the events. Action taken with eculizumab in response to the events of blood pressure low, sleeping 22 hours per day, and stage 4 bowel cancer, was treatment withdrawn. The action taken with eculizumab in response to the event of death was reported as not applicable. Corrective treatment for the events of ovarian mass (a symptom of ovarian cancer), uterine mass, and abdominal discomfort included surgery (hysterectomy) and for the events of haemoglobin decreased and procedural haemorrhage included two units of transfusion. Corrective treatment for the events of jaundice and blood in urine included four transfusions. Corrective treatment for the event of stage 4 cancer included five rounds of radiation

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

and surgery. No treatment was required for the event of blood pressure decreased and corrective treatment for the rest of all events was not reported. The event outcome for procedural haemorrhage, chest wall cyst, was not reported and for the other events, it was not resolved. The outcome of the event blood pressure decreased was resolved. Upon the follow-up information, it was reported that the autopsy was not performed.
The reporter (patient) and nurse causality between the events of, herpes zoster, chest wall cyst, laboratory test abnormal, joint swelling, procedural haemorrhage, the patient deceased and eculizumab therapy was not reported. The reporter causality for haemoglobin decreased, and mass was reported as unknown. The causality of eculizumab treatment was unknown to the patient and the nurse. The causality with eculizumab treatment was not related to the rest of all events. The causality between the COVID-19 vaccine and the rest all the events was not reported. The alternative etiology included in the events of gastrointestinal cancer metastatic was reported as ovarian cancer, for the event of ovarian cancer was related to radiation and surgery.

No additional information has been requested as it is a data clarification form (DCF) response.

Company comment: Upon follow-up, this case is a serious, medically confirmed, solicited report of events ovarian cancer metastatic (F, H, MS), procedural haemorrhage (H, MS), haemoglobin decreased (H); non-serious, not medically confirmed events abdominal discomfort, herpes zoster, chest wall cyst, laboratory test abnormal, joint swelling, melanocytic naevus, gastrooesophageal reflux disease; non-serious, medically confirmed events off label use, blood urine present, lethargy, chromaturia, jaundice, nausea, blood pressure decreased, cancer fatigue. The events of haemoglobin decreased, gastrooesophageal reflux disease, jaundice, nausea, and joint swelling are listed in the eculizumab CCDS while the rest of the events are unlisted. Listedness is unknown for the COVID-19 vaccine. The event of joint swelling is attributed to the COVID-19 vaccine due to likely temporal association; hence considered related to the COVID-19 vaccine and not related to eculizumab; the rest of the events are not related to the COVID-19 vaccine based on the lack of temporal plausibility. There is a lack of information on the clinical details of the events, medical history, risk factors for malignancy, and causal factors for the events of ovarian cancer metastatic, abdominal discomfort, melanocytic naevus, herpes zoster, gastrooesophageal reflux disease, chest wall cyst; hence the events considered as not related to eculizumab. The event of abdominal discomfort could be secondary to ovarian cancer metastatic. Procedural haemorrhage could be due to surgery done for ovarian cancer metastatic and not related to eculizumab. The events of lethargy, chromaturia, jaundice, and nausea could most likely be attributed to the underlying ovarian cancer metastatic and PNH and not related to eculizumab. The events of haemoglobin decreased, laboratory test abnormal and blood urine present are more likely due to underlying paroxysmal nocturnal haemoglobinuria given its clinical manifestations; hence considered as not related to eculizumab. Off-label use is a non-clinical event; hence considered not related to eculizumab. The events of blood pressure decreased and cancer fatigue was likely due to ovarian cancer metastatic and associated complications; hence not related to eculizumab.

Follow-up was received on [redacted] 2022 from the physician and contained the following significant information:
Added information regarding the autopsy.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a non-contactable reporter(s) (Other HCP).

A female patient in her 80's received BNT162b2 (COMIRNATY), in 2021 as dose 3 (booster), single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (1st dose), administration date: 2021; Covid-19 vaccine (2nd dose), administration date: 2021.
The following information was reported: NEOPLASM MALIGNANT (death, medically significant), outcome "fatal", described as "Cancer"; ABDOMINAL PAIN (non-serious), outcome "unknown", described as "severe abdominal pain". The patient date of death was unknown. Reported cause of death: "Cancer".

Clinical course: : Reporter reporting this interaction based on a conversation they had with a friend at there tennis club. The patient is his girlfriend's mom. Female patient in her 80s received 3 doses of COVID-19 vaccine last year and 6 months after receiving booster shot, patient developed severe abdominal pain and died of cancer. The cancer was quick to progress and did not have time to be diagnosed or treated. Unknown if patient had any underlying health conditions or was on any other medications. Event took place after use of product. Reporter does not wish to be contacted for follow-up.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information provided in the narrative, a causal association between the suspect drug and the events cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evalustion, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from a contactable reporter(s) (Other HCP) from Regulatory Authority. Regulatory number: E2B_05301736 (Health Canada).

A 70-year-old male patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) intramuscular for covid-19 immunisation; epoetin alfa (EPOETIN ALFA), (Batch/Lot number: unknown), subcutaneous for anaemia of malignant disease. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: CEREBROVASCULAR ACCIDENT (death, hospitalization, medically significant), outcome "fatal"; DRUG INEFFECTIVE FOR UNAPPROVED INDICATION (death, hospitalization, medically significant), outcome "fatal"; FALL (death, hospitalization, medically significant), outcome "fatal"; FULL BLOOD COUNT DECREASED (death, hospitalization, medically significant), outcome "fatal".
Clinical course: The reporter's assessment of the causal relationship of "cerebrovascular accident", "drug ineffective for unapproved indication", "fall" and "full blood count decreased" with the suspect product(s) COVID-19 Vaccine - Manufacturer Unknown was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.
The action taken for epoetin alfa was unknown. The date and cause of death for the patient were unknown. It was not reported if an autopsy was performed.

Follow-up attempts are completed. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association between the reported events cerebrovascular accident and fall with the suspect drug BNT162B2 cannot be excluded. Based on the available information events drug ineffective for unapproved indication and full blood count decreased considered associated to the underlying medical condition of malignant disease and suspect product Epoetin Alfa and unrelated to BNT162B2. The case will be reassessed once new information is available.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from Regulatory Authority. Regulatory number: 000987996 (Health Canada).

A fetus patient was exposed to COVID-19 Vaccine - Manufacturer Unknown, transplacental, administration details for the mother: as dose number unknown, single (Batch/Lot number: unknown) intramuscular for covid-19 immunisation.
The mother's relevant medical history and concomitant medications were not reported.
The following information was reported: FOETAL HEART RATE ABNORMAL (death, medically significant), outcome "fatal"; MATERNAL EXPOSURE DURING PREGNANCY (death, medically significant), outcome "fatal". The pregnancy resulted in still birth. The patient date of death was unknown. Reported cause of death: "Foetal heart rate abnormal", "Maternal exposure during pregnancy".

Follow-up attempts are completed. No further information is expected.

Amendment: This follow up is being submitted to amend previously reported information: removed event 'Foetal death'.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP and Physician).

A 46-year-old male patient received BNT162b2 (COMIRNATY), on [redacted]2021 as dose 2, single (Lot number: FD7206) at the age of 46 years for covid-19 immunisation. The patient's relevant medical history included: "Allergies: Penicillin" (unspecified if ongoing); "Chronic asthma" (unspecified if ongoing), notes: Mild; "Hypertension" (unspecified if ongoing), notes: well controlled; "Dyslipidemia" (unspecified if ongoing); "Sleep apnea" (unspecified if ongoing). Concomitant medication(s) included: PMS AMITRIPTYLINE; ROSUVASTATIN; VENTOLIN [SALBUTAMOL]; COVERSYL [PERINDOPRIL ARGININE] oral taken for hypertension. Vaccination history included: Comirnaty (Dose 1; Batch/Lot No: Ex0438), for covid-19 immunisation.
The following information was reported: DIZZINESS (non-serious) with onset [redacted]2021, outcome "not recovered"; HEADACHE (non-serious) with onset [redacted]2021, outcome "not recovered", described as "Intense headaches"; NAUSEA (non-serious) with onset [redacted]2021, outcome "not recovered"; MYOCARDIAL INFARCTION (death, medically significant) with onset [redacted]2021, outcome "fatal", described as "heart attack". The event "heart attack" required emergency room visit. Therapeutic measures were not taken as a result of myocardial infarction. Therapeutic measures were taken as a result of headache, dizziness, nausea. The patient date of death was [redacted]2021. Reported cause of death: "Heart attack". No autopsy was performed.

Clinical course: The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Treatment for the events included Tylenol and Gravol. Prior to vaccination, the patient was not diagnosed with covid-19 and since the vaccination, the patient had not been tested for covid-19. As of 08Jul2022, diagnosis of heart attack according to the spouse and emergency room physician. Sudden death at home and there were no clear warning signs. Death report was completed at the emergency room. Physician indicated that she does not have the information regarding the vaccination dates. Coversyl was taken at the time of the vaccination.

Follow-up (08Jul2022): This is a spontaneous follow-up report from contactable physician. Updated information included patient details (medical history, death details updated), product details (concomitant coversyl added), and event details (unknown cause of death was updated to heart attack).

Follow-up attempts are completed. No further information is expected.

Amendment: This follow-up report is being submitted to amend previous information: Physician confirmed that no relevant test were performed for this patient.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of the reported event cannot be totally excluded.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a non-health professional and describes the occurrence of THROMBOSIS (Clotting) and MYOCARDIAL INFARCTION (Massive heart attack) in a patient of an unknown age and gender who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. On an unknown date, the patient experienced THROMBOSIS (Clotting) (seriousness criteria death and medically significant). an unknown date, the patient experienced MYOCARDIAL INFARCTION (Massive heart attack) (seriousness criteria death and medically significant). The reported cause of death was massive heart attack and clotting. It is unknown if an autopsy was performed.

No concomitant medication was reported.

Patient died of a massive heart attach 48 hours after the Moderna shot which was caused by clotting, stemming from this drug.

No treatment information was provided.

Company Comment: This spontaneous case concerns a patient (age and gender not specified) with no medical history reported, who experienced the unexpected fatal serious (medically significant) AESI of Thrombosis and Myocardial infarction unspecified days after a dose of mRNA-1273 vaccine (dose number not specified). Death occurred 48 hours after the vaccination. The reported cause of death was massive heart attack and clotting. It is unknown if an autopsy was performed. No further details on clinical course, other lab test results and treatment received were reported. The outcome of both events was reported as fatal. The benefit-risk relationship of mRNA-1273 is not affected by this report.

Reporter's comments (B.5.2)

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP).

A 78-year-old female patient received BNT162b2 (COMIRNATY), on [redacted]021 as dose 3 (booster), single (Batch/Lot number: unknown) at the age of 77 years, in right arm for covid-19 immunisation. The patient's relevant medical history included: "health issues/ heart" (unspecified if ongoing); "health issues/ liver" (unspecified if ongoing); "Allergy" (unspecified if ongoing). The patient took concomitant medications. Vaccination history included: biontech/pfizer vaccine (comirnaty) (Dose 2, Location of injection: Arm Right), administration date: [redacted]020, when the patient was 77-year-old, for Covid-19 immunization; biontech/pfizer vaccine (comirnaty) (Dose 1, Location of injection: Arm Right), administration date: 11Jun2019, when the patient was 75-year-old, for Covid-19 immunization.
The following information was reported: DEATH (death, hospitalization, medically significant), outcome "fatal", described as "her organs shout down slowly, one by one until she died"; CARDIAC DISORDER (death), outcome "fatal", described as "The reported cause of death was "Heart but really >> Pfizer".". The patient was hospitalized for death (hospitalization duration: 21 day(s)). The events "her organs shout down slowly, one by one until she died" and "the reported cause of death was "heart but really >> pfizer"." required emergency room visit. The patient underwent the following laboratory tests and procedures: SARS-CoV-2 test: negative. Therapeutic measures were taken as a result of death, cardiac disorder. The patient date of death was [redacted]2021. The reported cause of death was unknown, "The reported cause of death was "Heart but really >> Pfizer".". No autopsy was performed.
The clinical course: The reporter's cousin (patient) had prior health issues and lived quite well on preventive meds for 20 years with her liver and heart. She was fine until she had Pfizer, 3 shots as coerced. The reporter's cousin went into hospital and before they could start tests, she wound up in ICU for over 2 weeks as her organs shout down slowly, one by one until she died. The treatment received for the adverse event included dialysis.
Prior to vaccination, patient was not diagnosed with COVID-19. The reported cause of death was "Heart but really >> Pfizer".

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Follow-up (09Aug2022): Follow-up attempts are completed. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a consumer via patient support programs and described the occurrence of death in a 77-year-old female patient who received mepolizumab powder for injection (batch number KH8X, expiry date 31st August 2025) for eosinophilic asthma.

Co-suspect products included covid-19 vaccine (Covid Vaccine) for drug use for unknown indication.

Additional subject notes included no other condition. Concomitant products included fluticasone propionate (Flovent), glycopyrronium bromide + indacaterol maleate (Ultibro), prednisone and salbutamol (Ventolin).

On 20th December 2017, the patient started mepolizumab (subcutaneous) 100 mg (see dose text). On an unknown date, the patient started Covid Vaccine at an unknown dose and frequency. On an unknown date, an unknown time after starting mepolizumab, the patient experienced death (serious criteria death and GSK medically significant), difficulty breathing (serious criteria hospitalization), blackout (serious criteria hospitalization and GSK medically significant) and low blood pressure. On an unknown date, the outcome of the death was fatal and the outcome of the difficulty breathing was not recovered/not resolved and the outcome of the blackout and low blood pressure were unknown. The reported cause of death was unknown cause of death.

It was unknown if the reporter considered the death, difficulty breathing, blackout and low blood pressure to be related to mepolizumab.

Linked case(s) involving the same patient: CA2018GSK103293, CA2018GSK168694, CA2018GSK199352, CA2019AMR147526, CA2019GSK021927, CA2019GSK070985, CA2020AMR004679, CA2020AMR088012, CA2020AMR208962, CA2021262204, CA2021AMR096384, CA2022118479

GSK Receipt Date: [redacted] 2022
Reporter's Comments: This report was submitted by site [redacted] Nucala Patient Support Program (Vista). On [redacted] 2022 it was notified by patient's son that patient was admitted to the hospital on day before reporting [redacted] 2022 due to her breathing and would be staying there for a few days. There was no patient history. Mepolizumab drug used by patient was Nucala. No further information was provided.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporters comments: Patient was admitted to hospital twice on the week of [redacted] 2022 and the week of [redacted] 2022. for blocking out. Patient doesn't remember that exact date of when she was admitted. Also patient received her fourth covid shot on [redacted] 2022. Patient blood pressure was low(96/63) and nurse advised to stay hydrated and take a seat if dizziness occurred. No further information was provided.

Follow-up information received on 26-Sep-2022. This follow-up was considered significant.
Reporter's Comments: Patient's son reached out and advised that his mother (the patient) had passed away. It was unknown if the reporter considered the death, difficulty breathing, blackout and low blood pressure to be related to Covid Vaccine.
Summary of Changes: event death added, concomitant product information updated, narrative updated.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Death, Dyspnoea and loss of consciousness are an unlisted event which are considered unrelated to GSK drug Mepolizumab.

ATIA - 19(1)

Summary (B.5)

Case narrative (B.5.1)

This literature-non-study case was reported in a literature article and describes the occurrence of DEATH (Death) and COVID-19 (SARS-CoV-2 infection) in a 76-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 prophylaxis.

LITERATURE REFERENCE:
[redacted]

Concurrent medical conditions included HIV infection and Immunocompromised.

In 2021, the patient received second dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) dosage was changed to 1 dosage form.
On an unknown date, the patient received first dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. On an unknown date, after starting mRNA-1273 (Moderna CoviD-19 Vaccine), the patient experienced COVID-19 (SARS-CoV-2 infection) (seriousness criterion hospitalization). The patient died in 2021. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, COVID-19 (SARS-CoV-2 infection) outcome was unknown.

DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available):
In [redacted] 2021, SARS-CoV-2 test: Positive SARS-CoV-2 on nasopharyngeal swab.
On an unknown date, CD4 lymphocytes: 110 cells per cubic millimetre.
On an unknown date, SARS-CoV-2 antibody test: Negative.
On an unknown date, Viral test: On nasopharyngeal swab collected on post-diagnosis day 68 revealed the presence of infectious virus and On nasopharyngeal swab collected on post-diagnosis day 142 revealed the presence of infectious virus.
On an unknown date, Whole-genome sequencing: Confirmed persistent infection with the same virus.

For mRNA-1273 (Moderna CoviD-19 Vaccine) (Unknown), the reporter considered DEATH (Death) and COVID-19 (SARS-CoV-2 infection) to be not related.

The asymptomatic patient was hospitalized for monitoring because of a history of significant immunocompromised related to untreated HIV infection.

Patient had received the second dose 3 months before infection. Patient remained well throughout admission without receiving COVID-19 directed therapies, however patient continued to have detectable SARS-CoV-2 RNA from upper respiratory tract samples until the time of his death from unrelated causes 142 days after the initial diagnosis. The cycle threshold (Ct) values remained below 20.

In [redacted] 2021, the patient experienced COVID-19 (SARS-CoV-2 infection) (seriousness criterion hospitalization).

No concomitant and treatment medications were reported.
Company comment: This is a fatal literature non-study case, concerning a 76-year-old man in long term care facility (LTC), with a history of significant immunocompromise related to untreated HIV infection, who was hospitalized with persistent asymptomatic COVID 19 infection and died of unrelated causes 3 months after receiving the second dose of mRNA-1273 vaccine. Relevant history included the first dose of mRNA-1273 and a CD4 count of 110 cells/mm3. No COVID 19 directed therapies were administered throughout 142 days hospitalization. Detectable SARS-CoV-2 RNA was found by nasopharyngeal swabs at days 68 and 142 and by whole genome sequencing because cycle threshold counts remained below 20, which can be associated with prolonged COVID-19 infection. Patient died on 142nd day from unrelated COVID 19 causes. Untreated HIV with low counts and residence in LTC predisposed to susceptibility to COVID, and immunocompromised status predisposed to persistent infections, e.g. COVID, and death as well as less protection/effectiveness of COVID 19 vaccination. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report.

Most recent FOLLOW-UP information incorporated above includes:
On 12-Jul-2022: Upon review on 22-Sep-22 significant corrections were performed. Event causality changed from related to not related and company comment was updated.
On 14-Jul-2022: Follow-up received by safety on 14-Jul-2022 has email with full text article and contains significant information: Reporter information and literature information were updated.

ADDITIONAL INFORMATION

ATIA - 19(1)

7+13. DESCRIBE REACTION(S) continued

The patient's medical history was not reported. Current condition included prostate cancer.

Concomitant medications were not provided.

The patient began receiving Eligard 22.5 mg, every 3 months, subcutaneously, since 11 Dec 2018 (Lot number and Expiration date not reported). The patient received his most recent dose of Eligard 22.5 mg, every 3 months, subcutaneously, on 24 Nov 2020 (Lot number and Expiration date carton: not reported; Lot number Syringe A: 11396A; Expiration date: Apr 2022; Lot number Syringe B: 11395A; Expiration date: Mar 2022).

On [redacted] 2021, the patient received his second Covid-19 vaccine. Since then, the patient had been placed on nasal prongs with difficulty breathing. The reporter would call the oncologist before scheduling patient's next injection which was due on [redacted] 2021. The action taken with the suspect product was dose not changed. De-challenge and re-challenge were not applicable. The outcome of the event was unknown.

The reporter did not assess the seriousness and causality of the event regarding Eligard therapy.

On [redacted] 2021, follow-up information was received by Sanofi (Mfr. no. 2021SA057379) from a consumer (daughter of the patient) via PSP_LEUPROLIDE_[redacted] and was sent to Tolmar on [redacted] 2021. Added event of passed away (Death). Updated action taken.

On [redacted] 2021, 2 years, 2 months and 8 days after starting Eligard therapy, the patient passed away due to an unknown cause. The patient was 95 years-old at the time of his death. It was unknown if an autopsy was performed. The action taken with the suspect product, de-challenge and re-challenge were not applicable. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

No further information was provided.

Evaluator Comment (Tolmar): This 95 year old male experienced dyspnea and died while on Eligard therapy for prostate cancer. Tolmar assessed the event of death as serious due to fatal outcome, dyspnea was assessed as not serious event as no patient jeopardy was reported. Tolmar assessed the causal role of Eligard (drug component) in the event of death as not assessable as lack of information regarding cause of death, autopsy details, events or circumstances preceding death, clinical state of underlying prostate cancer, relevant medical history, concomitant medications and supportive investigations done precludes meaningful medical assessment of the report. However, based on the available information, advanced age underlying prostate cancer are pre-existing risk factors for the reported event. Dyspnea is also assessed as not related to Eligard components as the event occurred following the COVID-19 vaccine, indicative of a potential reaction to the vaccine.

7+13. DESCRIBE REACTION(S) continued

The patient's medical history was not reported. Current condition included prostate cancer.

Concomitant medications were not provided.

The patient began receiving Eligard 22.5 mg, every 3 months, subcutaneously, since 11 Dec 2018 (Lot number and Expiration date not reported). The patient received his most recent dose of Eligard 22.5 mg, every 3 months, subcutaneously, on 24 Nov 2020 (Lot number and Expiration date carton: not reported; Lot number Syringe A: 11396A; Expiration date: Apr 2022; Lot number Syringe B: 11395A; Expiration date: Mar 2022).

On [redacted] 2021, the patient received his second Covid-19 vaccine. Since then, the patient had been placed on nasal prongs with difficulty breathing. The reporter would call the oncologist before scheduling patient's next injection which was due on [redacted] 2021. The action taken with the suspect product was dose not changed. De-challenge and re-challenge were not applicable. The outcome of the event was unknown.

The reporter did not assess the seriousness and causality of the event regarding Eligard therapy.

On [redacted] 2021, follow-up information was received by Sanofi (Mfr. no. 2021SA057379) from a consumer (daughter of the patient) via PSP_LEUPROLIDE_[redacted] and was sent to Tolmar on [redacted] 2021. Added event of passed away (Death). Updated action taken.

On [redacted] 2021, 2 years, 2 months and 8 days after starting Eligard therapy, the patient passed away due to an unknown cause. The patient was 95 years-old at the time of his death. It was unknown if an autopsy was performed. The action taken with the suspect product, de-challenge and re-challenge were not applicable. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

No further information was provided.

On 19 Mar 2021, follow-up information was received by Sanofi (Mfr. no.: 2021SA057379) from a consumer (patient's daughter in law) and was sent to Tolmar on 22 Mar 2021. Added new reporter (daughter in law) and cause of death. Updated verbatim and coding of the event from "Passed away (Death)" to "Passed away due to congestive heart failure (Congestive heart failure)". Upon internal review, COVID-19 vaccine was added as co-suspect. This report no longer meets expedited reporting criteria therefore the case is been downgraded.

Co-suspect product included COVID-19 vaccine for COVID-19 prophylaxis.

On [redacted] 2021, 2 years, 2 months and 8 days after starting Eligard therapy, the patient passed away due to congestive heart failure. It was unknown if an autopsy was performed. Moreover, reporter was not able to provide which COVID vaccine the patient received. She was not aware if the patient's death was reported to Health Canada and gave consent for both her contact and doctor's contact information to be shared. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

Evaluator Comment (Tolmar): This 95-year-old male patient passed away due to congestive heart failure while on Eligard therapy for prostate cancer. Before his death, he also experienced dyspnea. COVID-19 vaccine is considered co-suspect. Tolmar assessed congestive heart failure as serious due to fatal outcome (death); dyspnea is assessed as non-serious (no patient jeopardy was reported). The causal role of Eligard (drug and device component) for the events is assessed as not related. Given the known pathology and risk factors for congestive heart failure and the drug's safety profile, a causal association between the event and Eligard is considered unlikely. The advanced age of the patient is a risk factor. Dyspnea occurred following the COVID-19 vaccine, indicative of a potential reaction to the vaccine. Likely concurrent congestive heart failure is another plausible explanation for dyspnea.

Good morning Ms. Séguin,

In an effort to gather additional information and answers to your questions below, Sanofi has actively sought follow-up information with the Healthcare professional involved in the care of this patient.
To date, no additional information has been received by Sanofi relative to this report. Shall further information become available, Sanofi will ensure that this is submitted to Health Canada via the standard expediting reporting procedure.

Thank you,
Kind regards,

[redacted]

Good afternoon [redacted]

Re: Health Canada Follow-Up Clarification Request

As a result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified individual case safety reports (ICSRs) where clarification is needed. Please investigate, clarify and resubmit case information for the following ICSRs that require clarification or have discrepancies which may impact case evaluation and/or signal detection:

MAH Case Number	Canada Vigilance Case Number	Clarification Requested

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

Safety report ID: 21CA025579 reported to HC on behalf of Tolmar, Fort Collins, USA concerning suspect drugs: **ELIGARD** (Sanofi-Aventis Canada Inc.) and co-suspect: "**COVID-19 vaccine**" (unspecified MAH) and stating the following in the case narrative: - On [redacted]2021, follow-up information was received by Sanofi (Mfr. no. 2021SA057379) from a consumer (daughter of the patient) via PSP_LEUPROLIDE[redacted] and was sent to Tolmar on [redacted]2021 - FU Information was received by Sanofi (Mfr. no.: 2021SA057379) from a consumer (patient's daughter in law) and was sent to Tolmar on 22 Mar 2021 Received by Health Canada on: 24/02/2021	000940311(1)	Specifically, our evaluators wish to request the following information: • Please provide any information regarding the time to onset after vaccination. • Please provide any information regarding clinical status before the vaccination. Specifically, any concomitant medications. • Please provide any information regarding more detailed information about the event of congestive heart failure, including any treatment. • Please provide any information regarding medical confirmation of the cause of death, and autopsy report.

Please provide a response within 15 days upon receipt of this correspondence, April 9th , 2021, in order to allow for sufficient time for case evaluation. Kindly send response to our generic Canada Vigilance COVID-19 Vaccine account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca) with a cc to myself, Michelle Séguin: michelle.seguin@canada.ca.

If you require further information within the scope of this request, please do not hesitate to contact me.

Thank you in advance for your much appreciated collaboration.

Sincerely,

Michelle Séguin on behalf of:

ADDITIONAL INFORMATION

ATIA - 19(1)

7+13. DESCRIBE REACTION(S) continued

2021SA057379) on [redacted] 2021 from a consumer (daughter of the patient) via PSP_LEUPROLIDE [redacted] and was sent to Tolmar on [redacted] 2021 regarding a 95 year-old elderly male patient (Patient ID: [redacted] who experienced difficulty breathing (Dyspnea) during Eligard (Leuprolide acetate) 22.5 mg therapy for prostate cancer. The needle component of the constituent device was not identified in the report.

The patient's medical history was not reported. Current condition included prostate cancer.

Concomitant medications were not provided.

The patient began receiving Eligard 22.5 mg, every 3 months, subcutaneously, since 11 Dec 2018 (Lot number and Expiration date not reported). The patient received his most recent dose of Eligard 22.5 mg, every 3 months, subcutaneously, on 24 Nov 2020 (Lot number and Expiration date carton: not reported; Lot number Syringe A: 11396A; Expiration date: Apr 2022; Lot number Syringe B: 11395A; Expiration date: Mar 2022).

On [redacted] 2021, the patient received his second Covid-19 vaccine. Since then, the patient had been placed on nasal prongs with difficulty breathing. The reporter would call the oncologist before scheduling patient's next injection which was due on [redacted] 2021. The action taken with the suspect product was dose not changed. De-challenge and re-challenge were not applicable. The outcome of the event was unknown.

The reporter did not assess the seriousness and causality of the event regarding Eligard therapy.

On [redacted] 2021, follow-up information was received by Sanofi (Mfr. no. 2021SA057379) from a consumer (daughter of the patient) via PSP_LEUPROLIDE_[redacted] and was sent to Tolmar on [redacted] 2021. Added event of passed away (Death). Updated action taken.

On [redacted] 2021, 2 years, 2 months and 8 days after starting Eligard therapy, the patient passed away due to an unknown cause. The patient was 95 years-old at the time of his death. It was unknown if an autopsy was performed. The action taken with the suspect product, de-challenge and re-challenge were not applicable. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

No further information was provided.

On 19 Mar 2021, follow-up information was received by Sanofi (Mfr. no.: 2021SA057379) from a consumer (patient's daughter in law) and was sent to Tolmar on 22 Mar 2021. Added new reporter (daughter in law) and cause of death. Updated verbatim and coding of the event from "Passed away (Death)" to "Passed away due to congestive heart failure (Congestive heart failure)". Upon internal review, COVID-19 vaccine was added as co-suspect. This report no longer meets expedited reporting criteria therefore the case is been downgraded.

Co-suspect product included COVID-19 vaccine for COVID-19 prophylaxis.

On [redacted] 2021, 2 years, 2 months and 8 days after starting Eligard therapy, the patient passed away due to congestive heart failure. It was unknown if an autopsy was performed. Moreover, reporter was not able to provide which COVID vaccine the patient received. She was not aware if the patient's death was reported to Health Canada and gave consent for both her contact and doctor's contact information to be shared. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

On 23 Apr 2021, follow up information was received by Sanofi (Mfr. No.: 2021SA057379) and sent to Tolmar on 26 Apr 2021. Added new healthcare professional (HCP) reporter, update medically confirm to yes, added new cause of death, added new event of "Passed away due to natural prostate cancer (Progression of prostate cancer)", updated causality, and updated narrative.

The patient was under the care of a doctor in nursing home at the time of the breathing difficulty following the second dose of COVID-19 vaccine administration; therefore the reporting HCP did not know the onset date of the breathing difficulty. It was unknown if use of other medications or other pre-existing conditions/risk factors caused the breathing difficulty. The patient was not hospitalized prior to his death. The HCP mentioned the patient died due to natural prostate cancer progression (conflicting information previously reported as congestive heart failure). It was unknown if an autopsy was performed. The patient did not know if investigational tests were performed confirming the congestive heart failure (previously reported as cause of the death). It was unknown if the cause of death was caused by the use of other medications. The action taken with the suspect product, de-challenge and re-challenge were not applicable. The outcome of the new event of passed away due to natural prostate cancer was fatal.

The HCP assessed the new event of passed away due to natural prostate cancer as serious (Death) and assessed causality of difficulty breathing and death due to natural prostate cancer progression as not related to Eligard treatment.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi d'accès à l'information par Santé Canada

ADDITIONAL INFORMATION

7+13. DESCRIBE REACTION(S) continued

Evaluator Comment (Tolmar): This 95-year-old male patient passed away due to congestive heart failure and natural prostate cancer (Progression of prostate cancer) while on Eligard therapy for prostate cancer. Before his death, he also experienced dyspnea. COVID-19 vaccine is considered co-suspect. Tolmar assessed congestive heart failure and progression of prostate cancer as serious due to fatal outcome (death); dyspnea is assessed as non-serious (no patient jeopardy was reported). The causal role of Eligard (drug and device component) for the events is assessed as not related. Given the known pathology and risk factors for congestive heart failure and the drug's safety profile, a causal association between the event and Eligard is considered unlikely. The advanced age of the patient is a risk factor. The underlying prostate cancer (and its nature to progress) in this elderly patient can likely explain the event. Dyspnea occurred following the COVID-19 vaccine, indicative of a potential reaction to the vaccine. The likely concurrent congestive heart failure is another plausible explanation for dyspnea.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer via regulatory authority in Canada (HEALTH CANADA), concerning a female patient of unknown ethnic origin (age 69 years).

No medical history was reported and no concomitant products were reported.

On an unknown date, the patient received Covid-19 Vaccine (covid-19 vaccine nrvv ad (chadox1 ncov-19)) total, via intramuscular route, for covid-19 immunisation.

On an unknown date, the patient started treatment with Stelara (ustekinumab) 520 mg, intravenous (not otherwise specified), for crohn's disease.

On an unknown date, the patient experienced cholelithiasis (preferred term: Cholelithiasis), crohn's disease (preferred term: Crohn's disease), died (preferred term: Death)

It was unknown if any action was taken with Covid-19 Vaccine and Stelara.

On an unspecified date, the patient died.

It was not known whether an autopsy was performed. The cause of death was cholelithiasis, crohn's disease and death.

The reporter assessed the events of cholelithiasis, crohn's disease and death to be serious due to seriousness criteria death and important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.CAUSE OF DEATH: CHOLELITHIASIS CAUSE OF DEATH: CROHN'S DISEASE CAUSE OF DEATH: DEATH
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of Death, Crohn's disease and Cholelithiasis are not listed in the company core data sheet of AZD1222. Vaccinee age of 69 years could be a risk factor for the event Cholelithiasis, The cause of death is reported as cholelithiasis, crohn's disease and death. Vaccinee's past and current medical history of Crohn's disease could be considered as risk factor for the event Crohn's disease. Due to limited information on circumstances leading to the events, clinical course, other risk factors, Autopsy details, detailed diagnostic and etiologic workup (complete blood count, autoimmune work up, infectious work up, imaging studies), the evaluation did not find evidence to suggest a causal relationship between the fatal events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (he ended up dying from the COVID-19 shot) in a male patient of an unknown age who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. On an unknown date, the patient experienced DEATH (he ended up dying from the COVID-19 shot) (seriousness criteria death and medically significant) and PAIN IN EXTREMITY (Had pain in arm which went to his legs). The patient died on an unknown date. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, PAIN IN EXTREMITY (Had pain in arm which went to his legs) outcome was unknown.

No concomitant medications were reported.
It was reported that patient was not sure if it was due to the Moderna vaccine.

No treatment medications were reported.

Company comment: This spontaneous case concerns a unspecified age male patient, with no medical history, who experienced unexpected fatal serious (medically significant) event of death (reported as he ended up dying from the COVID-19 shot), which occurred unspecified days after a dose (dose number not specified) of mRNA-1273 vaccine. The patient died on an unknown date. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, PAIN IN EXTREMITY (Had pain in arm which went to his legs) outcome was unknown. The benefit risk relationship of mRNA-1273 is not affected by this report.

This case was linked to CA-MODERNATX, INC.-MOD-2022-632612, CA-MODERNATX, INC.-MOD-2022-632626, CA-MODERNATX, INC.-MOD-2022-632628 (E2B Linked Report).

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a patient family member or friend and describes the occurrence of DEATH (his body shut down/They put him in a coma, and then he died), DEAFNESS (he lost his hearing) and BLINDNESS (he received the vaccine, and then he lost his sight.) in a male patient of an unknown age who received mRNA-1273 (Spikevax) for COVID-19 prophylaxis.

Concurrent medical conditions included Blood pressure (He had blood pressure problems), Diabetes, Coma (gave it to him when he was in a coma. Ended up dying in the coma) and Broken leg (he went in with a broken leg. and he received the vaccine).

On an unknown date, the patient received dose of mRNA-1273 (Spikevax) (unknown route) 1 dosage form. On an unknown date, the patient experienced DEATH (his body shut down/They put him in a coma, and then he died) (seriousness criterion death), DEAFNESS (he lost his hearing) (seriousness criterion medically significant) and BLINDNESS (he received the vaccine, and then he lost his sight.) (seriousness criterion medically significant). The patient died on an unknown date. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, DEAFNESS (he lost his hearing) and BLINDNESS (he received the vaccine, and then he lost his sight.) outcome was unknown.

Concomitant medications were not reported.
No treatment information was provided by the reporter.

As per the reporter , patient never wanted to take the vaccine but it was administered in the hospital when patient was in coma. Patient said reporter that he would never take the vaccine.

It was reported that patient received vaccine and then he lost his sight and then 3 weeks later patient lost his hearing and his body shut down. Patient was put in coma and patient died.

As per the reporter patient blamed it on the vaccine.

Company comment:
This is a spontaneous case concerning a male patient of unknown age with relevant concurrent medical conditions of blood pressure problems, diabetes, and broken leg. The patient has no reported vaccination history. The patient experienced the unexpected serious fatal event of death, and the unexpected serious (medically significant) events of deafness and blindness. The events exact occurrence was unknown but stated that the events occurred after the unknown dose number of mRNA-1273 vaccine administration. Allegedly the events were described as, on unknown date the patient went in with a broken leg. On unknown date, the patient was in coma when he received the unknown dose number of mRNA-1273 vaccine. On unknown date, after receiving the unknown dose number of mRNA-1273 vaccine, the patient lost his sight and then three weeks later, the patient lost his hearing and his body shut down. It was reported that the patient was put to coma and then he died. No further clinical information was available for medical review. It is unknown if autopsy was performed. The cause of death was not reported. The concurrent medical conditions of blood pressure problems, diabetes and broken leg remain confounders for the event death. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report.

Reporter's comments (B.5.2)

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer, concerning a male patient of Caucasian ethnic origin born in 1947 (height 66 in, weight 165 lb).

No medical history was reported and no concomitant products were reported.

On 23-Apr-2021, the patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number MT0055), via intramuscular route, for an unknown indication.

On an unknown date, the patient experienced 2nd stroke (preferred term: Cerebrovascular accident).

Action taken with Astrazeneca Covid-19 Vaccine was not applicable.

The patient died from the event of 2nd stroke on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was 2nd stroke.

The reporter assessed the event of 2nd stroke to be serious due to seriousness criterion death and important medical event.CAUSE OF DEATH: 2ND STROKE
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Cerebrovascular accident (reported as 2ND STROKE) is not listed in the company core data sheet of AZD1222.The vaccinee died from the event of 2nd stroke on an unspecified date. It was not known whether an autopsy was performed. The cause of death was reported as 2nd stroke. Advanced age could be considered as confounding factor for the event. Due to limited information on baseline health condition before vaccination, relevant family history, concurrent conditions and concomitant medications, risk factors (atherosclerosis, cardiovascular disorder, smoking, high cholesterol levels), circumstances surrounding the event, clinical course of the event, treatment given, detailed diagnostic and etiologic workup (complete blood analysis including infectious workup, neurological examination, coagulation profile, cardiac profile, imaging studies of heart and brain), autopsy report if any with a confirmed diagnosis and date of death, the evaluation did not find evidence to suggest aa causal relationship between the fatal event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from Pharmacist via the regulatory authority in Canada concerning a female patient of Unknown ethnic origin (age 69 years).

No medical history was reported and No concomitant products were reported.

On an unknown date, The patient received Vaxzevria Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for covid-19 prophylaxis.

On an unknown date, The patient started treatment with Stelara (ustekinumab) Dose Unknown for crohn's disease.

On an unknown date, the patient experienced cholelithiasis (preferred term: Cholelithiasis), crohn's disease (preferred term: Crohn's disease), Death (preferred term: Death).

It was unknown if any action was taken with Vaxzevria Vial Contains 10 Doses Of 0.5ml and Stelara.

The patient died (MedDRA PT: Death) on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was cholelithiasis, crohn's disease and death.

Reporter assessed the events cholelithiasis, crohn's disease and death as serious due to seriousness criteria of death and important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.
CAUSE OF DEATH: CHOLELITHIASIS CAUSE OF DEATH: CROHN'S DISEASE CAUSE OF DEATH: DEATH CHOLELITHIASIS - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes CROHN'S DISEASE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes DEATH - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of Cholelithiasis, Crohn's disease and Death are not listed in the company core data sheet of AZD1222. The vaccine died on an unspecified date. It was not known whether an autopsy was performed. The cause of death was reported as cholelithiasis, crohn's disease and death. Elderly age and the vaccinees relevant medical history of crohn's disease could be considered as contributory risk factors for the event. Due to limited information on baseline health condition before vaccination, relevant family history, concomitant medications, date of vaccine administration, onset date of the events, details and circumstances surrounding the events, clinical course of the events, treatment given, risk factors, treatment provided, detailed etiologic and diagnostic workup (complete blood tests with infectious profile, liver profile, colonoscopy and imaging of abdomen), autopsy report if any with a confirmed diagnosis and date of death, the evaluation did not find evidence to suggest a caausal relationship between the fatal events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from a contactable reporter(s) (Other HCP) from Regulatory Authority. Regulatory number: E2B_05587761 (Health Canada).

A 90-year-old male patient received BNT162b2 (COMIRNATY), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation; golimumab (SIMPONI), (Batch/Lot number: unknown) for 946 days at 50 mg monthly, subcutaneous for ankylosing spondylitis. The patient's relevant medical history was not reported. Concomitant medication(s) included: AMLODIPINE unknown; AMLODIPINE unknown.
The following information was reported: ARTERIAL OCCLUSIVE DISEASE (death, hospitalization), outcome "fatal"; COVID-19 (death, hospitalization), DRUG INEFFECTIVE (death, hospitalization), outcome "fatal" and all described as "COVID-19". The action taken for golimumab was unknown. The date and cause of death for the patient were unknown. It was not reported if an autopsy was performed.

The reporter's assessment of the causal relationship of "arterial occlusive disease" and "covid-19" with the suspect product(s) BNT162b2 was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association be-tween the event and the suspect drug cannot be excluded.
The impact of this report on the benefit-risk profile of the Pfizer product and on the conduct of the study is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP) from Regulatory Authority. Regulatory number: V2208236 (CAEFISS).

A 35-year-old male patient received BNT162b2 (COMIRNATY), on [redacted]2021 as dose 1, single (Lot number: EW0221) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. The following information was reported: MYOPERICARDITIS (death), outcome "fatal"; CARDIAC DISCOMFORT (death), 1440 min after the suspect product(s) administration, outcome "fatal". The patient date of death was [redacted]2022. Reported cause of death: "Cardiac discomfort", "Myopericarditis". It was not reported if an autopsy was performed.

Clinical course: Level of care obtained: None, MedDRA LLT Terms (Diagnosis): (1)Cardiac discomfort. MedDRA LLT Terms (Medical Case Review): Myopericarditis.

No follow-up attempts are possible. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

MEPOLIZUMAB PATIENT SUPPORT PROGRAM

This is a non-interventional study report received from contactable reporter(s) (Consumer or other non HCP, Pharmacist and Physician) from Regulatory Authority. Regulatory number: E2B_05499967 (Health Canada). Other Case identifier(s): CA2022034800 (GlaxoSmithKline), CA-GLAXOSMITHKLINE-CA2022034800 (GlaxoSmithKline).

A 93-year-old male patient received BNT162b2 (COMIRNATY), as dose 4 (booster), single (Batch/Lot number: unknown), as dose 3 (booster), single (Batch/Lot number: unknown), as dose 2, single (Batch/Lot number: unknown) and as dose 1, single (Batch/Lot number: unknown) for covid-19 immunisation; mepolizumab (MEPOLIZUMAB), first regimen (Batch/Lot number: unknown) at 100 mg, second regimen (Batch/Lot number: unknown) at 100 mg, third regimen (Lot number: BL2S, Expiration Date: 30Jun2023) for 259 days at 100 mg (100 mg (100 mg, z, every 4 weeks)), fourth regimen (Lot number: H36E, Expiration Date: 30Sep2023) and fifth regimen (Lot number: H36E, Expiration Date: 30Sep2023), all subcutaneous for asthma; mepolizumab (MEPOLIZUMAB), (Batch/Lot number: unknown) at 100 mg, subcutaneous for asthma. The patient's relevant medical history was not reported. Concomitant medication(s) included: ADVAIR unknown; INSPIOLTO RESPIMAT unknown; PREGABALIN unknown; SPIRIVA [TIOTROPIUM BROMIDE] unknown; VENTOLINE [SALBUTAMOL].
The following information was reported: DEATH (death, hospitalization, medically significant), outcome "fatal", described as "THAT PATIENT IS DECEASED"; PNEUMONIA (hospitalization, medically significant), outcome "not recovered", described as "LUNG INFECTION"; COUGH (hospitalization, medically significant), outcome "unknown", described as "INTERMITTENT COUGH/INTERMITTENT DRY COUGH"; PRODUCTIVE COUGH (hospitalization, medically significant), outcome "unknown", described as "PRODUCTIVE COUGH WITH WHITE SECRETIONS"; SPUTUM DISCOLOURED (hospitalization, medically significant), outcome "unknown", described as "DARK GREEN MUCUS SINCE PAST WEEK/WHITE SECRETIONS"; INAPPROPRIATE SCHEDULE OF PRODUCT ADMINISTRATION (non-serious), outcome "unknown", described as "CURRENT INJECTION OUTSIDE THE 7-DAY TREATMENT WINDOW/Drug dose administration interval too long". The patient underwent the following laboratory tests and procedures: Oxygen saturation: 96 %, notes: Nasal O2 adjusted from 8 LPM to 7.5 LPM. The action taken for mepolizumab and mepolizumab was unknown. Therapeutic measures were taken as a result of pneumonia, cough, productive cough, sputum discoloured. The date and cause of death for the patient were unknown. It was not reported if an autopsy was performed.

The reporter's assessment of the causal relationship of "that patient is deceased", "lung infection", "intermittent cough/intermittent dry cough", "productive cough with white secretions" and "dark green mucus since past week/white secretions" with the suspect product(s) BNT162b2 was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow up (12Oct2022): This is a follow up non-interventional study report from a new contactable Pharmacist from Regulatory Authority. Regulatory number: E2B_05499967 (Health Canada). This information was initially reported to Health Canada between 26Apr2022 and 16Jun2022 from an unknown Market Authorization Holder and AER # CA2022034800. Updated information included: Added new reporter (pharmacist), new event (death) and new seriousness for the reported events (Death), Outcome of the events (Updated to Fatal) for the events pneumonia, cough, productive cough, sputum discoloured.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Follow-up (21Nov2022): This is a Non-Interventional study report received from the Health Canada Regulatory Authority in response to an Access to Information Request (ATI Request) completed by Pfizer Canada. The regulatory authority report number is E2B_05499967. This information was initially reported to Health Canada on 2022 (Health Canada Latest Received Date: 16Jun2022) from other Market Authorization Holter GlaxoSmithKline. Other MAH Reference Number: CA-GLAXOSMITHKLINE-CA2022034800. This report was also incorrectly submitted to the US FDA with Biologic License Application number 125742 for BNT162B2 and is now being submitted with the correct Emergency Use Authorization number 027034 for BNT162B2. Updated information included: Study name, new reporter, lab data, dose descriptions for suspect, co-suspect details (Mepolizumab), concomitant medications information, events (that patient is deceased and Lung infection) and clinical information in narrative.

This case was reported by a consumer via patient support programs and described the occurrence of unknown cause of death in a 93-year-old male patient who received mepolizumab solution for injection in pre-filled pen (batch number BL2S, expiry date 30Jun2023) for eosinophilic asthma. Co-suspect products included mepolizumab autoinjector device administration system (batch number BL2S, expiry date 30Jun2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled pen (batch number H36E, expiry date 30Sep2023) for eosinophilic asthma, mepolizumab autoinjector device administration system (batch number H36E, expiry date 30Sep2023) for eosinophilic asthma and tozinameran (Comirnaty) for covid-19 prophylaxis. Additional subject notes included Patient was Afebrile. Patient history was unknown. Concomitant products included fluticasone propionate+ salmeterol xinafoate (Advair), salbutamol (Ventolin), olodaterol hydrochloride + tiotropium bromide (Inspiolto), tiotropium bromide (Spiriva) and pregabalin. On an unspecified date the patient started mepolizumab (subcutaneous) 100 mg, mepolizumab autoinjector device, mepolizumab (subcutaneous) 100 mg and mepolizumab autoinjector device. On an unknown date, the patient started Comirnaty at an unknown dose and frequency. On an unknown date, the dose was changed to an unknown dose and frequency. On an unknown date, the dose was changed to an unknown and frequency. On the dose was changed to an unknown dose and frequency. On 232 days after starting mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device, the patient experienced drug dose administration interval too long. On an unknown date, the patient experienced unknown cause of death (serious criteria death and GSK (GlaxoSmithKline) medically significant), lung infection (serious criteria hospitalization and GSK medically significant), cough, sputum discolored and productive cough. The subject was treated with prednisone and antibiotics NOS (Antibiotic (Active Ingredient Unknown)). On an unknown date, the outcome of the unknown cause of death was fatal and the outcome of the lung infection was not recovered/not resolved and the outcome of the drug dose administration interval too long, cough, sputum, discolored and productive cough were unknown. The reported cause of death was unknown cause of death. It was unknown if the reporter considered the

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

unknown cause of death, lung infection, cough, sputum discolored and productive cough to be related to mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Reporter's Comments: This report was submitted via the online direct entry reporting system. The patient was also the reporter. Reporter type was consumer. Post infusion report mentioned that the patient with intermittent cough but stable. Wife present. Patient said he had dark green mucus since past week and was afebrile. Patient was advised via phone by his physician yesterday to start his action plan. Patient said he would start his Prednisone and antibiotic this afternoon. Injection well tolerated. No issues. Patient stable at writer's departure. No further information provided. Patient history was unknown. Reporter and Health Care Provider (HCP) did not consent to contact.

Follow-up information received on an unspecified date 2022. It was reported that on an unknown date patient experienced productive cough. On an unknown date, outcome of the event productive cough. The causality of the event productive cough was unknown. Reporter's Comments: Post infusion report: Patient stable, wife present. Intermittent dry cough noted. Patient had productive cough with white secretions yesterday evening per wife. Respiratory therapist present. Nasal O2 (oxygen) adjusted from 8 LPM to 7.5 LPM as O2 saturation reading was 96%. Injection tolerated well. No issues. Patient stable at depart. No further information provided.

Follow-up information received on an unspecified date 2022.
Reporter's Comments: Patient's wife reported patient was currently hospitalized since last week. Wife did not provide reason of hospitalization.

Follow-up information received on an unspecified date in 2022.
Reporter's Comments: Post infusion report. Patient hospitalized for lung infection. Patient on prednisone 5 mg. New medicine pregabalin 25 mg. Patient has 4th dose COVID-19 Pfizer vax (vaccine). Patient has appointment with doctor. Injection well tolerated. No issues. Patient stable at departure. Patient missed schedule dose of injection on. Patient's current injection outside the 7-day treatment window. Last dose of drug was administrated on. It was unknown if the reporter considered Lung infection to be relates to COVID-19 vaccine. No further information provided.

Follow-up information received on an unspecified date in 2022.
Reporter's Comments: This case was received via Nucala Patient Support Program (Vista). Mepolizumab dose was given every 4 weeks. Patient's wife reported patient currently hospitalized due to lung infection since past 3 weeks. It was unknown if the reporter considered the lung infection, cough, sputum discolored and productive cough to be related Comirnaty. No further information provided.

Follow-up information received on an unspecified date in 2022.
Reporter's Comments: Patient was moved to palliative approach, Nucala was to be stopped. No further information provided.
Additional supportive information: Mepolizumab drug used by patient was Nucala.

Follow-up information received on an unspecified date in 2022.
Reporter's Comments: Case was received by pharmacist via Nucala Patient Support Program (Vista). It was reported that patient was deceased. No further information provided. It was unknown if autopsy was performed. It was unknown if the reporter considered the unknown cause of death, lung infection, cough, sputum discolored and productive cough to be related to Comirnaty.

Reporter's comments: Not provided.
Sender's comments: Not provided.

Relevant medical history/ Concurrent conditions text noted patient was Afebrile. Patient history was unknown.

No follow-up attempts are possible. No further information is expected

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

As there is limited information in the case provided, the causal association between the reported events and the suspect drug cannot be excluded and are Related to the suspected drug .
Based on known disease pathophysiology, the event of death is assessed as not related to BNT162B2 and more likely due to underlying medical condition.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a patient family member or friend and describes the occurrence of DEATH (Reporter dad died isolated in LTC after Moderna) in a male patient of an unknown age who received mRNA-1273 (Spikevax) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Spikevax) (unknown route) 1 dosage form. Death occurred on 2021 The patient died in 2021. The cause of death was not reported. It is unknown if an autopsy was performed.

Reporter stated that patient was isolated in LTC after moderna vaccine.
No concomitant medication was reported.
No treatment medication was reported.

Company comment:
This fatal spontaneous case concerns a male patient of unknown age, with no medical history reported, who received a dose of mRNA-1273 and died. According to the reporter, the patient died isolated in long term care after receiving moderna vaccine. Latency cannot be properly assessed since no vaccination date nor onset date of the event were provided. No cause of death was reported, and it is unknown if an autopsy was made. The benefit-risk relationship of mRNA-1273 is not affected by this report.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This fatal spontaneous case concerns a male patient of unknown age, with no medical history reported, who received a dose of mRNA-1273 and died. According to the reporter, the patient died isolated in long term care after receiving moderna vaccine. Latency cannot be properly assessed since no vaccination date nor onset date of the event were provided. No cause of death was reported, and it is unknown if an autopsy was made. The benefit-risk relationship of mRNA-1273 is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer concerning a male patient of Unknown ethnic origin (age 59 years).

No medical history was reported and No concomitant products were reported.

On an unknown date, the patient received first dose of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml #dose1 (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number ASKU), via intramuscular route, for an unknown indication. On an unknown date, the patient received second dose of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml #dose2 (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number ASKU), via intramuscular route, for an unknown indication.

On an unknown date, the patient experienced arrhythmia (preferred term: Arrhythmia).

It was unknown if any action was taken with both the doses of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml

The patient died from the event arrhythmia on an unspecified date.

An autopsy was not performed. The cause of death was arrhythmia.

The reporter assessed the event of arrhythmia to be serious due to seriousness criteria of death.

All required follow up attempts have been completed to obtain the Lot / batch number for Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml, however the Lot / batch number was not received

Summary of follow-up information received by Astrazeneca/MedImmune on 14-Oct-2022 from consumer via spontaneous source: Lot / Batch number updated to ASKU. Lot / Batch number statement updated. Narrative amended. Minor correction on 14-Oct-2022: Autopsy performed was updated from unk to No.CAUSE OF DEATH: ARRHYTHMIA

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Arrhythmia is not listed in the company core data sheet of AZD1222. Due to limited information on circumstances leading to the event, onset date of event,relevant medical and family history,concurrent conditions, concomitant medications, date of vaccination, possible risk factors, etiological and diagnostic work up, autopsy details, the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP), Program ID: [redacted]

A female patient received BNT162b2 (COMIRNATY), on [redacted]2022 at 12:31 as dose number unknown (booster), single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: DEATH (death) with onset [redacted]022 at 12:38, outcome "fatal", described as "died". The patient date of death was [redacted]2022. The reported cause of death was unknown.
Clinical course: Patient died suddenly in a drug store allegedly within minutes of receiving her COVID-19 booster shot. She texted her daughter at 12:31 p.m. and said she was waiting her 15 min. At 12:38 p.m. she was unconscious in the drug store. They were saying in the store that it was about seven minutes after patient got the booster shot that she collapsed on the floor. A spokesperson said that patient's death was from natural causes. Patient had no health conditions and reporter believed that if she did not get Covid shot she would be here with them at the time of this report. Patient had been pro-vaccine, getting all of the required COVID-19 shots.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Amendment: This follow-up report is being submitted to notify that the initial information for this case was first received by the Company on 22Sep2022 and not on 26Sep2022 as previously reported. Due to safety database technical limitations, the field 'Initial Receipt Date' (i.e.Company first awareness date) can no longer be modified.

Follow-up (31Oct 2022): Follow-up attempts are completed. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a consumer via patient support programs and described the occurrence of unknown cause of death in a 76-year-old female patient who received ranibizumab solution for injection in pre-filled syringe (batch

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

death in a 70 year old female patient who received mepolizumab solution for injection in pre-filled syringe (batch number YK7H, expiry date 30th June 2023) for eosinophilic asthma.

Co-suspect products included mepolizumab pre-filled syringe device injection syringe (batch number YK7H, expiry date 30th June 2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled syringe (batch number LK8K, expiry date 30th November 2023) for eosinophilic asthma, mepolizumab pre-filled syringe device injection syringe (batch number LK8K, expiry date 30th November 2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled syringe (batch number GH8D, expiry date 28th February 2025) for eosinophilic asthma, mepolizumab pre-filled syringe device injection syringe (batch number GH8D, expiry date 28th February 2025) for eosinophilic asthma, Flu Seasonal QIV Quebec (Canadian influenza vaccine Quadrivalent 2022-2023 season) for prophylaxis and covid-19 vaccine for covid-19 prophylaxis.

Concurrent medical conditions included allergy to antibiotic (Bactrim). Additional subject notes included no patient history. Concomitant products included cefalexin (Cephalexin), azithromycin and prednisone.

On [redacted] 2020, the patient started mepolizumab (subcutaneous) 100 mg (every 4 weeks), mepolizumab pre-filled syringe device, mepolizumab (subcutaneous) 100 mg (every 4 weeks), mepolizumab pre-filled syringe device, mepolizumab (subcutaneous) 100 mg (every 4 weeks) and mepolizumab pre-filled syringe device. On an unknown date, the patient received Canadian influenza vaccine Quadrivalent 2022-2023 season and covid-19 vaccine at an unknown dose and frequency. On [redacted] 2022, 573 days after starting mepolizumab, mepolizumab pre-filled syringe device, mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device and not applicable after receiving Canadian influenza vaccine Quadrivalent 2022-2023 season, the patient experienced oxygen saturation decreased. In [redacted] 2022, the patient experienced chest pain. On [redacted] 2022, the patient experienced increased blood pressure. On [redacted] 2022, the patient experienced high pulse rate and drug dose administration interval too long. On an unknown date, the patient experienced unknown cause of death (serious criteria death and GSK medically significant), hospitalization (serious criteria hospitalization), lung infection (serious criteria hospitalization and GSK medically significant), exertional dyspnea, injection site pain, diarrhea, wound, burning sensation in eye and sore throat. The subject was treated with salbutamol (Ventolin) and amoxicillin + clavulanate potassium (Amoxiclav). Mepolizumab was continued with no change. Mepolizumab was continued with no change. Mepolizumab was continued with no change. On [redacted] 2022, the outcome of the drug dose administration interval too long was unknown. On an unknown date, the outcome of the unknown cause of death was fatal and the outcome of the hospitalization was not recovered/not resolved and the outcome of the increased blood pressure, high pulse rate, lung infection, injection site pain, diarrhea, wound, burning sensation in eye and sore throat were unknown and the outcome of the oxygen saturation decreased and exertional dyspnea were recovering/resolving and the outcome of the chest pain was recovered/resolved. The reported cause of death was unknown cause of death.

It was unknown if the reporter considered the unknown cause of death, hospitalization, exertional dyspnea, oxygen saturation decreased, chest pain, injection site pain, diarrhea, wound, increased blood pressure, burning sensation in eye, sore throat and high pulse rate to be related to mepolizumab, mepolizumab pre-filled syringe device, mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device. The reporter considered the lung infection to be unrelated to mepolizumab, mepolizumab pre-filled syringe device, mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device. It was unknown if the reporter considered the unknown cause of death, lung infection and high pulse rate to be related to Canadian influenza vaccine Quadrivalent 2022-2023 season. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Linked case(s) involving the same patient:CA2020AMR099985, CA2020AMR127544, CA2021AMR062591, CA2021AMR207444, CA2021AMR250124

GSK Receipt Date: [redacted] 2022
Reporter's Comments: Post infusion report: Patient shortness of breath on exertion. Took ventolin as needed. Patient said she felt better when she was sitting down. Injection well tolerated. No other issues. Patient stable at departure. No further information provided. Other products were unknown. Patient took Mepolizumab as Nucala every 4 weeks.

Follow-up information received on [redacted] 2022. This follow-up was considered significant. Reporter's Comments: This case received from Nucala Patient Support Program (Vista). Post infusion report: Patient Shortness of breath on exertion gradually stabilized. Low Oxygen saturation reading oscillating from 80 percent to 93 percent with 1.5 liters per minute oxygen. Patient took Ventolin earlier. Patient stated she had undergone an ENT (ear, nose, and throat) /ORL exam [redacted] 2022. Injection tolerated well. No issues. Patient stable at departure. Patient received Nucala for severe eosinophilic asthma. No further information provided.
Summary of Changes: Allergy of Bactrim and event of oxygen saturation decreased added. Outcome of Exertional dyspnea updated.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Patient SOB(shortness of breath) on exertion. O2 oscillating from 81% to 92% w/ 1.5 LPM O2, stabilizing at rest. Patient denied any other adverse event since last treatment. Patient said decreased O2 happens all the time even with small effort like going to the bathroom, etc. Injection well tolerated. No voiced complaints. Patient stable at my departure. No further information provided.
Summary of changes: added lab data, updated event verbatim..

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Case was received via Nucala Patient Support Program (Vista). Post infusion report: Patient stated she had chest pain 4 on 10 last week but eventually went away. Patient had 4th dose Covid19 Vaccine on 22ndApr. Oxygen saturation oscillating between 88percent to 91percent with 1 1/2 LPM O2 after walking 4 steps & resting for 5 mins. Patient said she felt fine. Injection well tolerated. No issues. Advised to seek prn. No further information provided. It was unknown if the reporter considered the exertional dyspnea, oxygen saturation decreased and chest pain to be related to covid-19 vaccine.
Summary of changes: Product details, event details and lab data, updated.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's comment: Patient stable when nurse arrived. Patient reported felt pain at injection site the evening after last tx, added pain did not last long. Patient said 2 weeks ago, she had diarrhea that lasted a day. Band-aid dressing noted on left small finger and second finger. Patient uncertain what caused small wound. Injection well tolerated. No immediate site reaction. Patient was stable.
Summary of changes: Injection site pain, diarrhea and Wound event was added.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Post infusion reported that patient Shortness Of Breath on exertion walking 3 meters around room. Patient reported had high Blood Pressure 190/123 and very low O2 66 percent RA last [redacted] after taking more than 5 minutes shower from new caregiver. Patient said EMS was not called as vitals gradually stabilized. Patient seen Ophthalmologist [redacted] 2022 & awaiting eye surgery. Patient said been two and half years feeling burning sensation time to time from both eyes. Patient complaint of burning sensation at start of injection but resolved. Patient stable. No further information provided.
Summary of changes: lab details added, Added event details for Increased blood pressure and eye irritation.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Post Injection report: Patient reported past week she experienced very low unstable O2 between 60 to 64 percent but gradually stabilized after increasing O2 aid from 1.5 percent to 2 percent LPM. Patient said she was Rx lung exercises by Dre with a Respiratory Therapist via online under Pulmonary Rehab Program. Patient said Dr was aware. Injection well tolerated. No further information provided.
Summary of Changes: Updated event term and narrative.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: [redacted] 2022 post injection report patient stable when nurse arrived. Patient reported had very low O2 saturation oscillating at 56mmol/L around 2 weeks ago. Patient had prednisone 50mg x 10 days since [redacted] 2022 and 5mg x 5 days thereafter part of her action plan. Patient stated she was benefiting from nucala as she had not been hospitalized since past year. Patient added she feels good doing her virtual lung exercises with therapists. Injection well tolerated. Patient stable. No further information provided.
Summary of Changes: Narrative updated.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Case was received via [redacted] Nucala Patient Support Program (Vista). Post infusion report: Patient stable when nurse arrived. Sister present. Patient stated currently on antibiotic Amoxiclav 875-125mg x 5 days since [redacted] and Prednisone 50mg x 5 days since [redacted] due to lung infection. Patient added she currently has sore throat but no fever. Patient added she was Covid negative. Patient reported had 50percent Oxygen saturation last week. Patient said she increased O2 to 2LPM past 2 weeks. Injection well tolerated. No immediate site reaction. Patient stable at my depart. No further information provided. It was unknown if the reporter considered the lung infection and sore throat to be related to covid-19 vaccine.
Summary of Changes: Lab data, product and event details updated.

Follow-up information received on [redacted] 2022
Reporter's Comments: This case was received from Nucala patient support program (Vista). Patient's caregiver called to cancel patient's next appointment as she was in hospital. Reporter was unsure if patient will be discharged before [redacted] and that she would like to cancel delivery of medication. Patient's caregiver stated they would call again to reschedule. Other products unknown. Did not consent to contact. No further information provided.
Summary of Changes: Event added

Follow-up information received on [redacted] 2022.
Reporter's Comments: This report was received by Site [redacted] - Nucala Patient Support Program (Vista). Post infusion report. Patient was stable when nurse arrived. Patient's niece was present, Niece said patient hospitalized due to pneumonia last [redacted] 2022 to [redacted] 2022. Patient said continuing Cephalexin 500mg since [redacted] 2022 finishing [redacted] 2022. Patient had regular Azithromycin 250 mg. she currently take 3/week for preventive measures. Patient said had 5th dose Covid-19Vaccine and Flu Vaccine around [redacted] 2022. High pulse noted 100bpm stabilized at 89bpm after 15 minutes post treatment. Injection well tolerated. No immediate site reaction. Patient was stable. Patient missed scheduled dose of injection on [redacted] 2022. Patient's current injection [redacted] 2022) outside the 7-day treatment window. Last dose of drug was administered on [redacted] 2022. No further information provided.
Summary of Changes: Products tab, patient tab, events tab and narrative got updated.

The case was amended on [redacted] 2022: The product start date was amended Co-suspect product Canadian influenza vaccine Quadrivalent 2022-2023 season start date [redacted] 2022 and Covid-19 vaccine start date [redacted] 2022 were removed from structured field and kept in narrative only.

Follow-up information received on [redacted] 2022
Reporter's Comment: This report was received by Site [redacted] - Nucala Patient Support Program (Vista). Post infusion report. Email received stated the patient had passed away (death NOS). No further information provided.
Summary of Changes: Patient tab, product tab, Event tab and narrative updated.

Case level outcome :Fatal

This case was reported by a consumer via patient support programs and described the occurrence of unknown cause of death in a 76-year-old female patient who received mepolizumab solution for injection in pre-filled syringe (batch number YK7H, expiry date 30th June 2023) for eosinophilic asthma.

Co-suspect products included mepolizumab pre-filled syringe device injection syringe (batch number YK7H, expiry date 30th June 2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled syringe (batch number LK8K, expiry date 30th November 2023) for eosinophilic asthma, mepolizumab pre-filled syringe device injection syringe (batch number LK8K, expiry date 30th November 2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled syringe (batch number GH8D, expiry date 28th February 2025) for eosinophilic asthma, mepolizumab pre-filled syringe device injection syringe (batch number GH8D, expiry date 28th February 2025) for eosinophilic asthma, Flu Seasonal QIV Quebec (Canadian influenza vaccine Quadrivalent 2022-2023 season) for prophylaxis and covid-19 vaccine for covid-19 prophylaxis.

DRAFT

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Continuation Sheet for CIOMS report **Mfr. Control No. :E2B_05977659**

Concurrent medical conditions included allergy to antibiotic (Bactrim). Additional subject notes included no patient history. Concomitant products included cefalexin (Cephalexin), azithromycin and prednisone.

On [redacted] 2020, the patient started mepolizumab (subcutaneous) 100 mg (every 4 weeks), mepolizumab pre-filled syringe device, mepolizumab (subcutaneous) 100 mg (every 4 weeks), mepolizumab pre-filled syringe device, mepolizumab (subcutaneous) 100 mg (every 4 weeks) and mepolizumab pre-filled syringe device. On an unknown date, the patient received Canadian influenza vaccine Quadrivalent 2022-2023 season and covid-19 vaccine at an unknown dose and frequency. On [redacted] 2022, 573 days after starting mepolizumab, mepolizumab pre-filled syringe device, mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device and not applicable after receiving Canadian influenza vaccine Quadrivalent 2022-2023 season, the patient experienced oxygen saturation decreased. In [redacted] 2022, the patient experienced chest pain. On [redacted] 2022, the patient experienced increased blood pressure. On [redacted] 2022, the patient experienced high pulse rate and drug dose administration interval too long. On an unknown date, the patient experienced unknown cause of death (serious criteria death and GSK medically significant), hospitalization (serious criteria hospitalization), lung infection (serious criteria hospitalization and GSK medically significant), exertional dyspnea, injection site pain, diarrhea, wound, burning sensation in eye and sore throat. The subject was treated with salbutamol (Ventolin) and amoxicillin + clavulanate potassium (Amoxiclav). Mepolizumab was continued with no change. Mepolizumab was continued with no change. Mepolizumab was continued with no change. On [redacted] 2022, the outcome of the drug dose administration interval too long was unknown. On an unknown date, the outcome of the unknown cause of death was fatal and the outcome of the hospitalization was not recovered/not resolved and the outcome of the increased blood pressure, high pulse rate, lung infection, injection site pain, diarrhea, wound, burning sensation in eye and sore throat were unknown and the outcome of the oxygen saturation decreased and exertional dyspnea were recovering/resolving and the outcome of the chest pain was recovered/resolved. The reported cause of death was unknown cause of death.

It was unknown if the reporter considered the unknown cause of death, hospitalization, exertional dyspnea, oxygen saturation decreased, chest pain, injection site pain, diarrhea, wound, increased blood pressure, burning sensation in eye, sore throat and high pulse rate to be related to mepolizumab, mepolizumab pre-filled syringe device, mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device. The reporter considered the lung infection to be unrelated to mepolizumab, mepolizumab pre-filled syringe device, mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device. It was unknown if the reporter considered the unknown cause of death, lung infection and high pulse rate to be related to Canadian influenza vaccine Quadrivalent 2022-2023 season. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Linked case(s) involving the same patient:CA2020AMR099985, CA2020AMR127544, CA2021AMR062591, CA2021AMR207444, CA2021AMR250124

GSK Receipt Date: [redacted] 2022
Reporter's Comments: Post infusion report: Patient shortness of breath on exertion. Took ventolin as needed. Patient said she felt better when she was sitting down. Injection well tolerated. No other issues. Patient stable at departure. No further information provided. Other products were unknown. Patient took Mepolizumab as Nucala every 4 weeks.

Follow-up information received on [redacted] 2022. This follow-up was considered significant. Reporter's Comments: This case received from Nucala Patient Support Program (Vista). Post infusion report: Patient Shortness of breath on exertion gradually stabilized. Low Oxygen saturation reading oscillating from 80 percent to 93 percent with 1.5 liters per minute oxygen. Patient took Ventolin earlier. Patient stated she had undergone an ENT (ear, nose, and throat) /ORL exam [redacted] 2022. Injection tolerated well. No issues. Patient stable at departure. Patient received Nucala for severe eosinophilic asthma. No further information provided.
Summary of Changes: Allergy of Bactrim and event of oxygen saturation decreased added. Outcome of Exertional dyspnea updated.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Patient SOB(shortness of breath) on exertion. O2 oscillating from 81% to 92% w/ 1.5 LPM O2, stabilizing at rest. Patient denied any other adverse event since last treatment. Patient said decreased O2 happens all the time even with small effort like going to the bathroom, etc. Injection well tolerated. No voiced complaints. Patient stable at my departure. No further information provided.
Summary of changes: added lab data, updated event verbatim..

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Case was received via Nucala Patient Support Program (Vista). Post infusion report: Patient stated she had chest pain 4 on 10 last week but eventually went away. Patient had 4th dose Covid19 Vaccine on [redacted] Oxygen saturation oscillating between 88percent to 91percent with 1 1/2 LPM O2 after walking 4 steps & resting for 5 mins. Patient said she felt fine. Injection well tolerated. No issues. Advised to seek prn. No further information provided. It was unknown if the reporter considered the exertional dyspnea, oxygen saturation decreased and chest pain to be related to covid-19 vaccine.
Summary of changes: Product details, event details and lab data, updated.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's comment: Patient stable when nurse arrived. Patient reported felt pain at injection site the evening after last tx, added pain did not last long. Patient said 2 weeks ago, she had diarrhea that lasted a day. Band-aid dressing noted on left small finger and second finger. Patient uncertain what caused small wound. Injection well tolerated. No immediate site reaction. Patient was stable.
Summary of changes: Injection site pain, diarrhea and Wound event was added.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Post infusion reported that patient Shortness Of Breath on exertion walking 3 meters around room. Patient reported had high Blood Pressure 190/123 and very low O2 66 percent RA last [redacted] after taking more than 5 minutes shower from new caregiver. Patient said EMS was not called as vitals gradually stabilized. Patient seen Ophthalmologist [redacted] 2022 & awaiting eye surgery. Patient said been two and half years feeling burning sensation time to time from both eyes. Patient complaint of burning sensation at start of injection but resolved. Patient stable. No further information provided.
Summary of changes: lab details added, Added event details for Increased blood pressure and eye irritation.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Post Injection report: Patient reported past week she experienced very low unstable O2 between 60 to 64 percent but gradually stabilized after increasing O2 aid from 1.5 percent to 2 percent LPM. Patient said she was Rx lung exercises by Dre with a Respiratory Therapist via online under Pulmonary Rehab Program. Patient said Dr was aware. Injection well tolerated. No further information provided.
Summary of Changes: Updated event term and narrative.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Continuation Sheet for CIOMS report **Mfr. Control No. :E2B_05977659**

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: 02 Sep 2022 post injection report patient stable when nurse arrived. Patient reported had very low O2 saturation oscillating at 56mmol/L around 2 weeks ago. Patient had prednisone 50mg x 10 days since [redacted] 2022 and 5mg x 5 days thereafter part of her action plan. Patient stated she was benefiting from nucala as she had not been hospitalized since past year. Patient added she feels good doing her virtual lung exercises with therapists. Injection well tolerated. Patient stable. No further information provided.
Summary of Changes: Narrative updated.

Follow-up information received on [redacted] 2022. This follow-up was considered significant.
Reporter's Comments: Case was received via [redacted], Nucala Patient Support Program (Vista). Post infusion report: Patient stable when nurse arrived. Sister present. Patient stated currently on antibiotic Amoxiclav 875-125mg x 5 days since [redacted] and Prednisone 50mg x 5 days since [redacted] due to lung infection. Patient added she currently has sore throat but no fever. Patient added she was Covid negative. Patient reported had 50percent Oxygen saturation last week. Patient said she increased O2 to 2LPM past 2 weeks. Injection well tolerated. No immediate site reaction. Patient stable at my depart. No further information provided. It was unknown if the reporter considered the lung infection and sore throat to be related to covid-19 vaccine.
Summary of Changes: Lab data, product and event details updated.

Follow-up information received on [redacted] 2022
Reporter's Comments: This case was received from Nucala patient support program (Vista). Patient's caregiver called to cancel patient's next appointment as she was in hospital. Reporter was unsure if patient will be discharged before October 28th and that she would like to cancel delivery of medication. Patient's caregiver stated they would call again to reschedule. Other products unknown. Did not consent to contact. No further information provided.
Summary of Changes: Event added

Follow-up information received on [redacted] 2022.
Reporter's Comments: This report was received by Site [redacted] - Nucala Patient Support Program (Vista). Post infusion report. Patient was stable when nurse arrived. Patient's niece was present. Niece said patient hospitalized due to pneumonia last [redacted] 2022 to [redacted] 2022. Patient said continuing Cephalexin 500mg since [redacted] 2022 finishing [redacted] 2022. Patient had regular Azithromycin 250 mg. she currently take 3/week for preventive measures. Patient said had 5th dose Covid-19Vaccine and Flu Vaccine around [redacted] 2022. High pulse noted 100bpm stabilized at 89bpm after 15 minutes post treatment. Injection well tolerated. No immediate site reaction. Patient was stable. Patient missed scheduled dose of injection on [redacted] 2022. Patient's current injection [redacted] 2022) outside the 7-day treatment window. Last dose of drug was administered on [redacted] 2022. No further information provided.
Summary of Changes: Products tab, patient tab, events tab and narrative got updated.

The case was amended on [redacted] 2022: The product start date was amended Co-suspect product Canadian influenza vaccine Quadrivalent 2022-2023 season start date [redacted]-2022 and Covid-19 vaccine start date [redacted] 2022 were removed from structured field and kept in narrative only.

Follow-up information received on [redacted] 2022
Reporter's Comment: This report was received by Site [redacted] - Nucala Patient Support Program (Vista). Post infusion report. Email received stated the patient had passed away (death NOS). No further information provided.
Summary of Changes: Patient tab, product tab, Event tab and narrative updated.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a physician and describes the occurrence of DEATH (I heard information that there was a case in Canada where 4 doctors received booster shots and all 4 died 2 weeks later.) in an adult patient of an unknown gender who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

For mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular), the reporter did not provide any causality assessments.

No concomitant medications were reported.

It was reported that 4 doctors received Spikevax bivalent booster shots and all 4 died 2 weeks later. It was unknown that the person vaccinated received any other vaccines 4 weeks prior to the COVID-19 vaccine.

Treatment information was not provided.

This case contained information for the fourth of 4 adult patients described by the reporter.

Company comment. This fatal spontaneous case concerns an adult patient (of an unknown gender and unknown exact age) with no reported medical history, who received a booster dose of mRNA - 1273.214 vaccine and experienced the unexpected serious event of death. Latency cannot be properly assessed since event's date and vaccination date were not provided. However, the report stated that four patients (doctors) received a booster shot and died 2 weeks later. The cause of death was not specified. It is unknown whether an autopsy was performed. No further clinical information has been provided for medical review. The benefit-risk relationship of mRNA-1273.214 is not affected by this report.
