Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a physician and describes the occurrence of DEATH (I heard information that there was a case in Canada where 4 doctors received booster shots and all 4 died 2 weeks later) in an adult patient of an unknown gender who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

For mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular), the reporter did not provide any causality assessments.

Concomitant medication was not reported.
Treatment details were not reported.
It was unknown that the person vaccinated received any other vaccines 4 weeks prior to the COVID-19 vaccine.

This case contained information for the second of 4 adult patients described by the reporter.

Company comment. This fatal spontaneous case concerns an adult patient (of an unknown gender and unknown exact age) with no reported medical history, who received a booster dose of mRNA - 1273.214 vaccine and experienced the unexpected serious event of death. Latency cannot be properly assessed since event's date and vaccination date were not provided. However, the report stated that four patients (doctors) received a booster shot and died 2 weeks later. The cause of death was not specified. It is unknown whether an autopsy was performed. No further clinical information has been provided for medical review. The benefit-risk relationship of mRNA-1273.214 is not affected by this report.

This case was linked to CA-MODERNATX, INC.-MOD-2022-652305, CA-MODERNATX, INC.-MOD-2022-656608, CA-MODERNATX, INC.-MOD-2022-656600 (E2B Linked Report).

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This fatal spontaneous case concerns an adult patient (of an unknown gender and unknown exact age) with no reported medical history, who received a booster dose of mRNA - 1273.214 vaccine and experienced the unexpected serious event of death. Latency cannot be properly assessed since event's date and vaccination date were not provided. However, the report stated that four patients (doctors) received a booster shot and died 2 weeks later. The cause of death was not specified. It is unknown whether an autopsy was performed. No further clinical information has been provided for medical review. The benefit-risk relationship of mRNA-1273.214 is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a physician and describes the occurrence of DEATH (I heard information that there was a case in Canada where 4 doctors received booster shots and all 4 died 2 weeks later.) in an adult patient of an unknown gender who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

For mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular), the reporter did not provide any causality assessments.

It was reported that 4 doctors received booster shots and all 4 died 2 weeks later.

Concomitant medications were not reported.

No treatment information was provided by the reporter.

This case contained information for the first of 4 adult patients described by the reporter.

Company comment. This fatal spontaneous case concerns an adult patient (of an unknown gender and unknown exact age) with no reported medical history, who received a booster dose of mRNA - 1273.214 vaccine and experienced the unexpected serious event of death. Latency cannot be properly assessed since event's date and vaccination date were not provided. However, the report stated that four patients (doctors) received a booster shot and died 2 weeks later. The cause of death was not specified. It is unknown whether an autopsy was performed. No further clinical information has been provided for medical review. The benefit-risk relationship of mRNA-1273.214 is not affected by this report.

This case was linked to CA-MODERNATX, INC.-MOD-2022-656599, CA-MODERNATX, INC.-MOD-2022-656608, CA-MODERNATX, INC.-MOD-2022-656600 (E2B Linked Report).

Most recent FOLLOW-UP information incorporated above includes:
On 26-Sep-2022: Upon internal review on 10-Oct-2022, significant correction was performed: This case was updated from invalid to valid and narrative was updated accordingly

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a physician and describes the occurrence of DEATH (I heard information that there was a case in Canada where 4 doctors received booster shots and all 4 died 2 weeks later) in an adult patient of an unknown gender who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

For mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Intramuscular), the reporter did not provide any causality assessments.

No concomitant medications were reported.

It was reported that 4 doctors received Spikevax bivalent booster shots and all 4 died 2 weeks later. The vaccinator did not authorize Moderna to communicate with health care professional. It was unknown that the person vaccinated received any other vaccines 4 weeks prior to the COVID-19 vaccine.

No treatment medications were reported.

This case contained information for the Third adult patient out of 4 patients described by the reporter.

Company comment. This fatal spontaneous case concerns an adult patient (of an unknown gender and unknown exact age) with no reported medical history, who received a booster dose of mRNA - 1273.214 vaccine and experienced the unexpected serious event of death. Latency cannot be properly assessed since event's date and vaccination date were not provided. However, the report stated that four patients (doctors) received a booster shot and died 2 weeks later. The cause of death was not specified. It is unknown whether an autopsy was performed. No further clinical information has been provided for medical review. The benefit-risk relationship of mRNA-1273.214 is not affected by this report.

This case was linked to CA-MODERNATX, INC.-MOD-2022-652305, CA-MODERNATX, INC.-MOD-2022-656599 (E2B Linked Report).

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from contactable reporters (Consumer or other non HCP and Other HCP) from Regulatory Authority. Regulatory number: E2B_05611972 (Health Canada). Other Case identifier: A202204950 (Unknown MAH).

A 63-year-old female patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) intramuscular for COVID-19 immunisation; eculizumab (SOLIRIS), first regimen details not provided (Batch/Lot number: unknown), second regimen (Batch/Lot number: unknown) for 22 days at 600 mg (1 every 1 weeks), intravenous and third regimen (Batch/Lot number: unknown) at 900 mg (1 every 2 weeks), intravenous for paroxysmal nocturnal haemoglobinuria. The patient's relevant medical history was not reported. Concomitant medications included: IMOVANE unknown; VITAMIN D [ERGOCALCIFEROL] unknown.
The following information was reported: ABDOMINAL DISCOMFORT (death, hospitalization, medically significant), outcome "fatal"; BLOOD PRESSURE DECREASED (death, hospitalization, medically significant), outcome "fatal"; BLOOD URINE PRESENT (death, hospitalization, medically significant), outcome "fatal"; CANCER FATIGUE (death, hospitalization, medically significant), outcome "fatal"; CHEST WALL CYST (death, hospitalization, medically significant), outcome "fatal"; CHROMATURIA (death, hospitalization, medically significant), outcome "fatal"; GASTROOESOPHAGEAL REFLUX DISEASE (death, hospitalization, medically significant), outcome "fatal"; HAEMOGLOBIN DECREASED (death, hospitalization, medically significant), outcome "fatal"; HERPES ZOSTER (death, hospitalization, medically significant), outcome "fatal"; JAUNDICE (death, hospitalization, medically significant), outcome "fatal"; JOINT SWELLING (death, hospitalization, medically significant), outcome "fatal"; LABORATORY TEST ABNORMAL (death, hospitalization, medically significant), outcome "fatal"; LETHARGY (death, hospitalization, medically significant), outcome "fatal"; MELANOCYTIC NAEVUS (death, hospitalization, medically significant), outcome "fatal"; NAUSEA (death, hospitalization, medically significant), outcome "fatal"; OFF LABEL USE (death, hospitalization, medically significant), outcome "fatal"; OVARIAN CANCER METASTATIC (death, hospitalization, medically significant), outcome "fatal"; PROCEDURAL HAEMORRHAGE (death, hospitalization, medically significant), outcome "fatal"; OVARIAN CANCER (hospitalization, medically significant), outcome "not recovered"; NEOPLASM MALIGNANT (hospitalization, medically significant), outcome "not recovered"; MASS (hospitalization, medically significant), outcome "not recovered"; OVARIAN MASS (hospitalization, medically significant), outcome "not recovered"; SKIN NEOPLASM EXCISION (hospitalization, medically significant), outcome "not recovered"; UTERINE MASS (hospitalization, medically significant), outcome "not recovered"; ABDOMINAL MASS (hospitalization, medically significant), outcome "not recovered"; GASTROINTESTINAL CANCER METASTATIC (hospitalization, medically significant), outcome "not recovered"; HYPERSOMNIA (hospitalization, medically significant), outcome "not recovered". The patient underwent the following laboratory tests and procedures: Blood urine: present; Haemoglobin: decreased; Laboratory test: abnormal; Blood pressure measurement: decreased. The action taken for eculizumab was unknown. The patient date of death was unknown. Reported cause of death: "Abdominal discomfort",

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

"Blood pressure decreased", "Blood urine present", "Cancer fatigue", "Chest wall cyst", "Chromaturia", "Gastrooesophageal reflux disease", "Haemoglobin decreased", "Herpes zoster", "Jaundice", "Joint swelling", "Laboratory test abnormal", "Lethargy", "Melanocytic naevus", "Nausea", "Off label use", "Ovarian cancer metastatic", "Procedural haemorrhage". It was not reported if an autopsy was performed.

The reporter's assessment of the causal relationship of "abdominal discomfort", "blood pressure decreased", "blood urine present", "cancer fatigue", "chest wall cyst", "chromaturia", "gastrooesophageal reflux disease", "haemoglobin decreased", "herpes zoster", "jaundice", "joint swelling", "laboratory test abnormal", "lethargy", "melanocytic naevus", "nausea", "off label use", "ovarian cancer metastatic", "procedural haemorrhage", "ovarian cancer", "neoplasm malignant", "mass", "ovarian mass", "skin neoplasm excision", "uterine mass", "abdominal mass", "gastrointestinal cancer metastatic" and "hypersomnia" with the suspect product COVID-19 Vaccine - Manufacturer Unknown was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (14Dec2022) received from the same contactable Consumer Or Other Non Health Professional as a follow up for this same patient. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number E2B_05611972. This information was initially reported to Health Canada between 01Jun2022 and 23Aug2022 from an unknown Market Authorization Holder AER# A202204950. Updated information included Events Abdominal mass, Chromaturia, Jaundice, Lethargy, Nausea and Neoplasm malignant was added.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected

Follow-up (20Jan2023) received from a new contactable Other Health Professional as a follow up for this same patient. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number E2B_05611972. This information was initially reported to Health Canada between 01Jun2022 and 26Sep2022 from an unknown Market Authorization Holder AER# A202204950. Updated information: new reporter, new events: Melanocytic naevus and Ovarian cancer.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (15Feb2023) received from the same contactable Consumer Or Other Non Health Professional as a follow up for this same patient. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number E2B_05611972. This information was initially reported to Health Canada between 01Jun2022 and 23Aug2022 from an unknown Market Authorization Holder AER# A202204950. Updated information included Events Abdominal mass, Chromaturia, Jaundice, Lethargy, Nausea and Neoplasm malignant was added.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Amendment: This follow-up report is being submitted to amend previous information: Significant PRD date in narrative from 15Feb2022 to 15Feb2023.

Follow-up (10Mar2023) received from the same contactable Other Health Professional as a follow up for this same patient. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number E2B_05611972. This information was initially reported to Health Canada between 01Jun2022 and 11Nov2022 from an unknown Market Authorization Holder AER# A202204950. Updated information included: New events (Cancer fatigue and Ovarian cancer metastatic), event details (seriousness and outcome).

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information provided in the narrative, a causal association between the events-abdominal discomfort, blood urine present, chest wall cyst, gastrooesophageal reflux disease, haemoglobin decreased, herpes zoster, joint swelling, laboratory test abnormal, mass, off label use, ovarian mass, procedural haemorrhage, skin neoplasm excision, uterine mass, abdominal mass, chromaturia, jaundice, lethargy, nausea and "neoplasm malignant, ovarian cancer, melanocytic nevus, blood pressure decreased, gastrointestinal cancer metastatic, hypersomnia, cancer fatigue, ovarian cancer metastatic and the suspect drug cannot be completely excluded.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulattory Authorities, Ethics Committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of ANAPHYLACTIC SHOCK (Severe Anaphylactic shock) in a female patient of an unknown age who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) for COVID-19 prophylaxis.

Concurrent medical conditions included Emphysema, Diabetes and Chronic obstructive pulmonary disease.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (unknown route) 1 dosage form. On an unknown date, the patient experienced ANAPHYLACTIC SHOCK (Severe Anaphylactic shock) (seriousness criteria death and medically significant). The patient was treated with EPINEPHRINE (EPIPEN) at a dose of 2 doses, one in leg , one in arm. The reported cause of death was severe anaphylactic shock. It is unknown if an autopsy was performed.

Ten minute post administration of moderna vaccine later, patient had a hard time breathing and was unconscious. The nurse administered the two Epipens, one in leg and another in arm, but they could not save her.Patient died in 15 minutes.
She had no allergic reaction in past.Patient was nervous about getting the jab.

Concomitant medications were not reported.
Company comment: This is a fatal spontaneous case concerning a female patient of an unknown age, with no allergic reaction in the past, who experienced the unexpected and serious (medically significant and death) event of severe Anaphylactic shock 10 minutes after receiving an unspecified dose of mRNA-1273.214 vaccine. She had a hard time breathing and soon she was unconscious. She received 2 doses of epinephrine, one in her arm and one in her leg, but she died in 15 minutes. No details about previous doses were provided. The reported cause of death was anaphylactic shock. It is unknown if an autopsy was performed. No further clinical information was provided for medical reviewing. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a pharmacist and describes the occurrence of DEATH (died 2 days after receiving the bivalent vaccine, dropped dead) in a 73-year-old male patient who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (batch no. 023c22a) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below.

Previously administered products included for Drug use for unknown indication: COVID-19 vaccine (Unknown dose 1) on 20-Apr-2021, COVID-19 vaccine (Unknown dose 2) on 24-Jun-2021 and COVID-19 vaccine (Unknown dose 3) on 05-Dec-2021.
Past adverse reactions to the above products included No adverse event with COVID-19 vaccine, COVID-19 vaccine and COVID-19 vaccine.

On [redacted]022, the patient received fourth dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (unknown route) 1 dosage form. In [redacted] 2022, the patient experienced DEATH (died 2 days after receiving the bivalent vaccine, dropped dead) (seriousness criteria death and medically significant) and FALL (collapsed). In [redacted] 2022, FALL (collapsed) outcome was unknown. The patient died in [redacted] 2022. The cause of death was not reported. An autopsy was performed, but no results were provided.

For mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Unknown), the reporter did not provide any causality assessments.

No concomitant medications were reported.

Patient was fine for 2 days after vaccination, did not have any side effects, he was doing well and suddenly while he was watching tv he collapsed and dropped dead. His wife came in today and she was telling that it was because of the vaccine. The autopsy is being done in the hospital and the report is not yet out. Patient's wife said that the patient died 2 days after receiving the bivalent vaccine.

No treatment medications were reported.

Company Comment: This is a Spontaneous case reported by a pharmacist, concerning a 73-year-old male patient, with no medical history reported, who experienced the unexpected event of Death, which occurred 2 days after mRNA-1273.214 vaccine, administered as fourth dose within COVID-19 vaccination schedule. It was reported that patient was doing well and suddenly while he was watching tv, he collapsed and dropped dead. The cause of death was not reported. An autopsy was performed, but not results were provided yet. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of THROMBOSIS (Thrombosis that caused his death / Her sons father died in 2021 two weeks after receiving the Moderna vaccine.) in a male patient of an unknown age who received mRNA-1273 (Moderna CovID-19 Vaccine) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Moderna CovID-19 Vaccine) (unknown route) 1 dosage form. In 2021, the patient experienced THROMBOSIS (Thrombosis that caused his death / Her sons father died in 2021 two weeks after receiving the Moderna vaccine.) (seriousness criteria death and medically significant) and PAIN IN EXTREMITY (He had Leg pain). The patient died in 2021. The reported cause of death was Thrombosis. It is unknown if an autopsy was performed. At the time of death, PAIN IN EXTREMITY (He had Leg pain) outcome was unknown.

No concomitant information was reported.
Patient died in 2021 two weeks after receiving the Modena COVID-19 vaccine. Patient had leg pain and they found out later on that it was a type of thrombosis that caused his death.
No treatment information was reported.

Company comment:
This spontaneous case concerns a male patient of unspecified age, with no medical history reported, who experienced the Fatal, unexpected serious (Death and medically significant) AESI event of Thrombosis that occurred in the context of mRNA-1273 vaccination. Latency cannot be assessed since vaccination date was not disclosed. The event is reported as Thrombosis that caused his death / Her sons father died in 2021 two weeks after receiving the Moderna vaccine. The reported cause of death was Thrombosis. It is unknown if an autopsy was performed. No additional information regarding clinical course, diagnostic tests, concomitant medication, and treatment details. The benefit-risk relationship of the mRNA-1273 vaccine is not affected by this report. Events seriousness was assessed as per medical judgement and available information.

Subject: Help with reporting system

Hello i found your email on the Gov websire while looking for a way to report the death of an healthy 25 year old who went into cardiac arrest on [redacted] 2021 he passed away shortly after on the same day. He took the moderna vaccine on [redacted] 2021,he passed just 37 short days after he took his first shot. can you please direct me on how to properly report his death to the reporting system? i have searched severl times and have yet to come up with a direct link to any reporting system one link just takes me to another then another with no way to report, its very confusing. one would think that reporting should be a simple form process for something so important. please help thank you

To: [redacted]
Subject: Correspondence from Marketed Health Products Directorate - Adverse Reaction Number 000965271

Dear Reporter,

Thank you for submitting information to the Canada Vigilance Program (CVP). We received your email, about ARs following immunization with Moderna's COVID-19 vaccine, on August 28, 2021.

We express our deepest sympathy to you and your family for your loss and understand that this must be a difficult situation for you.

We appreciate the time you took to write about this tragic event and hope that we will address your concerns.

We have recorded your information in our database and assigned the Adverse Reaction Report (AER) number **000965271.**Please note that we will contact you about your report only if additional information is required for our surveillance activities.

What is the Canada Vigilance Program (CVP)?

The CVP is a post-market surveillance program managed by Health Canada (HC). We collect and assess reports of suspected ARs to health products. Health professionals and consumers report voluntarily, while manufacturers, distributors, and hospitals must submit reports under the *Food and Drugs Act*.

What we will do with your report

Post-market surveillance enables HC to:

- monitor the safety of marketed health products
- ensure that their benefits continue to outweigh their potential risks
- take appropriate action to minimize new risks.

Such measures may include updating the label of a health product, risk communication to inform Canadians of new ARs through safety alerts and a product recall.

Please send the following information

To help us with our surveillance activities, please send us the below follow-up information (if available):

- Vaccine lot number
- Deceased person's past medical history
- Medications and health products taken by the deceased person
- Laboratory/investigation results (if any)
- Treatments received (if any)

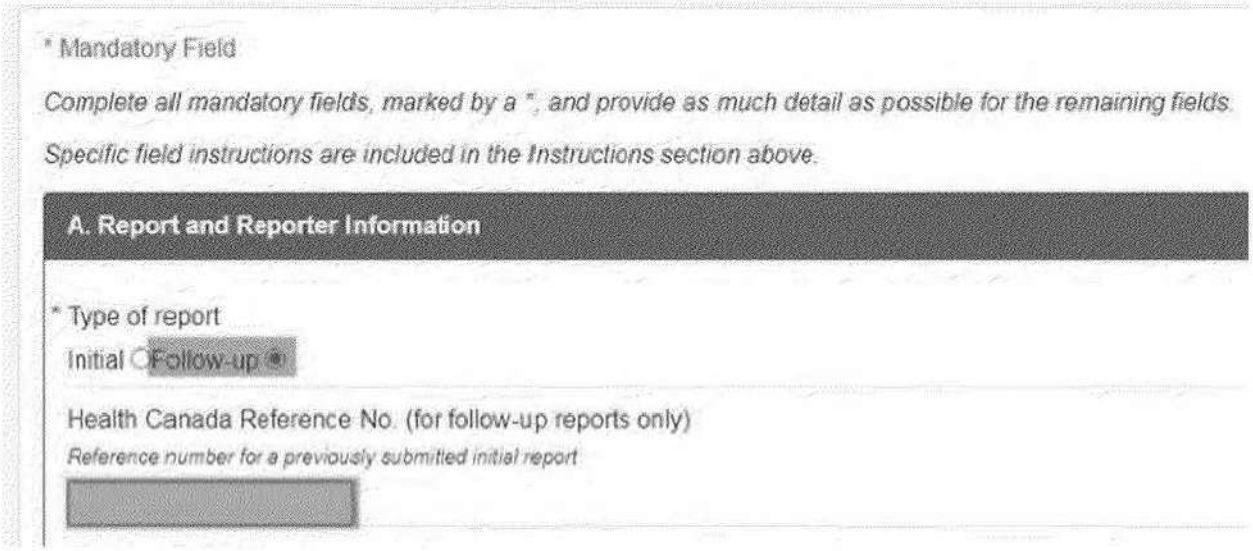
How to submit your follow-up information

1. Go to the online side effect reporting application.
2. Select the "follow-up" radio button.

Page: 1,122 of/de 2,140
A2023000085

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

3. Enter the AER number (stated above) in the "Health Canada reference no." field as shown below:



Additional information on side effects following COVID-19 vaccine immunization

For your awareness, HC and the Public Health Agency of Canada (PHAC) share the monitoring of the safety of vaccines in Canada. To learn more, please visit the Reporting Adverse Events Following Immunization (AEFI) in Canada webpage.

HC and the PHAC collaborate closely to monitor reports of adverse events following immunization with COVID-19 vaccines in Canada through the CVP and the Canadian Adverse Events Following Immunization Surveillance System (CAEFISS). AEFI are routinely monitored. The Government of Canada publishes on a weekly basis information on AEFIs with COVID-19 vaccines. These reports do not necessarily imply that a causal relationship between the event and the vaccine has been established.

When new safety issues are confirmed, HC considers a wide variety of risk-mitigation actions. Such measures may include communicating any new risks to Canadians and healthcare providers or changing the product's recommended use.

If you witness or experience a possible reaction to a vaccine, you can report it to your health care provider. They will report possible reactions following vaccination to their local public health authority, who in turn report through their federal, provincial or territorial immunization authorities. AEFI reports are ultimately forwarded to the PHAC.

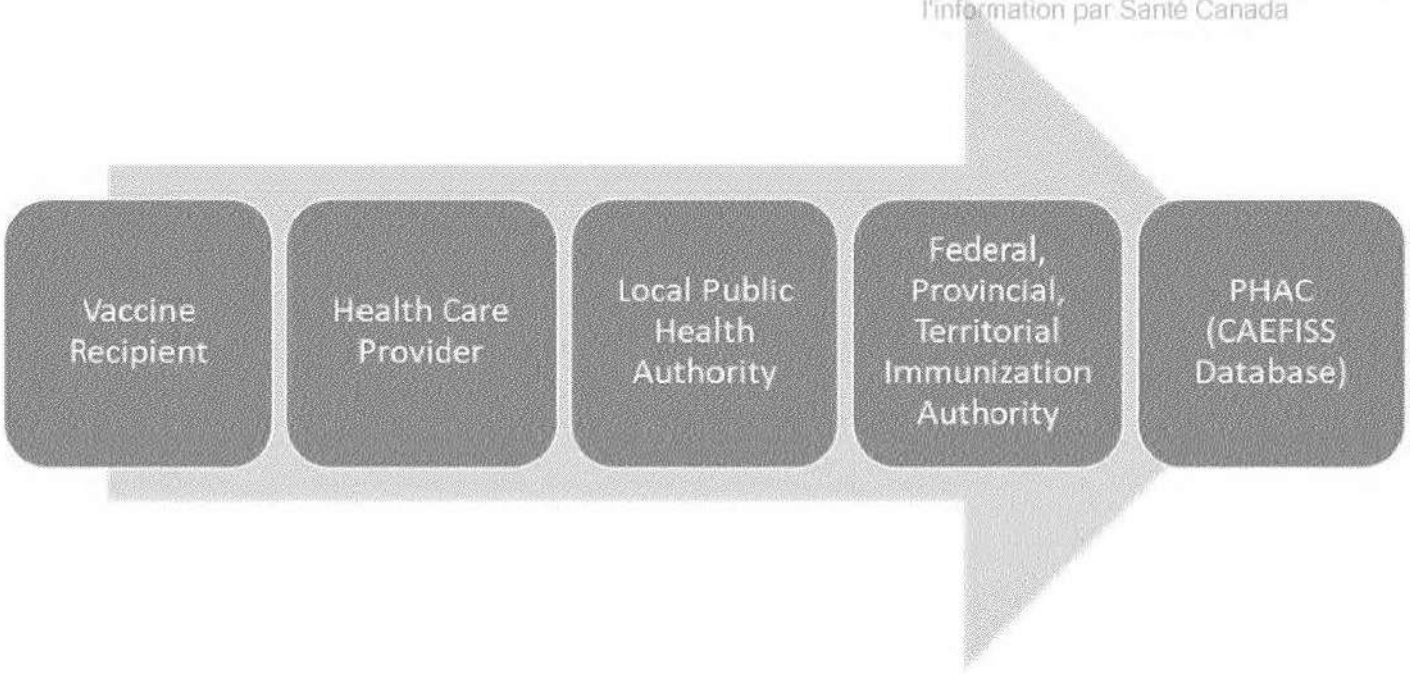
Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada



If this is not possible, consumers may report adverse reactions to vaccines directly to Health Canada through the Report a side effect application.

Since this application is not specific for vaccines, we recommend that you be as thorough as possible when completing your report.

Further information on vaccines and treatments authorized for COVID-19 can be found here: https://covid-vaccine.canada.ca/

More information

For information on health products for sale in Canada, including the Moderna vaccine, you may consult the Drug Product Database. This site allows you to search the database and read the product monographs. These provide information on contraindications, warnings, and precautions, as well as ARs associated with a particular product. You may access the Moderna vaccine product monograph in this link.

If you want to stay informed of HC's advisories, recalls, and other communication on health products, you may subscribe to MedEffect.

Once again, we would like to extend our sincere condolences and wish you the best. Please do not hesitate to contact the CVP if you need further information.

Sincerely,

Canada Vigilance Program
Health Canada, Government of Canada
canadavigilance@hc-sc.gc.ca / Tél. : 1-866-234-2345/ ATS : 1-800-465-7735

Please note that the CVP's email address has changed to canadavigilance@hc-sc.gc.ca. We encourage you to add this new email address to your safe sender list in order to ensure that you correctly receive the Program's emails.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a consumer via patient support programs and described the occurrence of death in a 90-year-old female patient who received mepolizumab solution for injection in pre-filled syringe (batch number LK8K, expiry date 30th November 2023) for eosinophilic asthma.

Co-suspect products included mepolizumab pre-filled syringe device injection syringe (batch number LK8K, expiry date 30th November 2023) for eosinophilic asthma, mepolizumab solution for injection in pre-filled syringe (batch number A76R, expiry date 31st March 2025) for eosinophilic asthma, mepolizumab pre-filled syringe device injection syringe (batch number A76R, expiry date 31st March 2025) for eosinophilic asthma, Flu unspecified (Flu vaccine) for prophylaxis, COVID-19 VACCINE for prophylaxis and glyceryl trinitrate (Nitropatch) for drug use for unknown indication.

Additional subject notes included Patient had no other conditions.

On [redacted] 2021, the patient started mepolizumab (subcutaneous) 100 mg (see dose text), mepolizumab pre-filled syringe device, mepolizumab (subcutaneous) 100 mg (see dose text) and mepolizumab pre-filled syringe device. On [redacted] 2022, the patient received Flu vaccine. On an unknown date, the patient received the 1st dose of COVID-19 VACCINE. On an unknown date, the dose was an unknown dose. On an unknown date, the dose was an unknown dose. On an unknown date, the dose was an unknown dose. On an unknown date, the dose was an unknown dose. On an unknown date, the patient started Nitropatch at an unknown dose and frequency. On [redacted] 2022, 583 days after starting mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device and not applicable after receiving Flu vaccine, the patient experienced poor sleep. On [redacted] 2022, the patient experienced tiredness. On [redacted] 2022, the patient experienced death (serious criteria death and GSK medically significant). On an unknown date, the patient experienced cough, sneezing, jaw movements disturbance, exertional dyspnea, oxygen saturation abnormal and oxygen saturation decreased. On [redacted] 2022, the outcome of the death was fatal. On an unknown date, the outcome of the poor sleep, tiredness, exertional dyspnea, oxygen saturation abnormal and oxygen saturation decreased were unknown and the outcome of the cough, sneezing and jaw movements disturbance were not recovered/not resolved. The subject died on [redacted] 2022. The reported cause of death was unknown cause of death.

It was unknown if the reporter considered the death, tiredness, poor sleep, cough, sneezing, jaw movements disturbance, exertional dyspnea, oxygen saturation abnormal and oxygen saturation decreased to be related to mepolizumab, mepolizumab pre-filled syringe device, mepolizumab and mepolizumab pre-filled syringe device. It was unknown if the reporter considered the death and oxygen saturation decreased to be related to Flu vaccine. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Linked case(s) involving the same patient: CA2020AMR192167, CA2021223416, CA2021241535, CA2021260730, CA2022071814

GSK Receipt Date: [redacted] 2022
Reporter's Comments: This case was received via Nucala Patient Support Program (Vista). Mepolizumab used by patient was Nucala. Patient used Nucala every 4 weeks. Patient said she felt tired today [redacted] 022) as she did not sleep well last night [redacted] 2022) for unknown reason. Mild cough and sneezing was noted. Patient stated she kept hearing "tep, tep, tep" whenever she moved her jaw. She added, no pain but it was annoying more than anything else it was amplified. Patient advised to consult MD (doctor of medicine) about it. Injection was well tolerated. No further information was provided.

FU information was received on [redacted] 2022. This FU was considered as significant.
Reporter comments: Patient had shortness of breath (SOB) on exertion, Oxygen saturation oscillating between 89 to 90 percent pre-injection. Patient said she received her 5th dose of Covid-19 vaccine on [redacted] 2022 on right arm. Patient was wearing Nitropatch on left arm. Patient in good spirits. Signatory waited with writer for med delivery. Treatment administered on left abdomen. Injection well tolerated. No immediate site reaction. No voiced concerns. Patient stable upon departure. No further information provided. It was unknown if the reporter considered the tiredness, poor sleep, cough, sneezing, jaw movements disturbance, exertional dyspnea and oxygen saturation abnormal to be related Covid-19 vaccine and Nitropatch.
Summary of changes: Co-suspect Covid-19 vaccine and Nitropatch added. Event exertional dyspnea and oxygen saturation abnormal added.

Follow-up information received on [redacted] 2022.
Reporter's Comments: Patient stable when I arrived. Patient had to wait 30 minutes for her treatment as she forgot to bring out medicine from fridge. Patient stated she had blood work done, received Flu vaccine [redacted] 2022. Low Oxygen Saturation reading at 88 percent pre-screening and stabilized at 92 percent w/ 3LPM post injection. Other Vital signs stable, afebrile. Injection well tolerated. No immediate site reaction. Patient stable and asymptomatic upon my departure.
Summary of changes: lab data added, suspect product, event and narrative added.

Follow-up information received on [redacted] 2022
Reporter comment: Pre-screening, patient's granddaughter reported patient passed away in her sleep the morning of [redacted] 022. No further information provided.
Summary of changes: Patient tab updated, event tab updated, product tab updated, narrative updated.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a consumer via patient support programs and described the occurrence of lung cancer in a 76-year-old female patient who received mepolizumab solution for injection in pre-filled pen for eosinophilic asthma.

Co-suspect products included mepolizumab autoinjector device administration system (batch number Unk, expiry date unknown) for eosinophilic asthma, mepolizumab solution for injection in pre-filled pen (batch number EC7Y, expiry date 1st February 2025) for eosinophilic asthma, mepolizumab autoinjector device administration system (batch number EC7Y, expiry date 1st February 2025) for eosinophilic asthma, Flu Seasonal QIV Quebec (Canadian influenza vaccine Quadrivalent 2022-2023 season) for prophylaxis and COVID-19 VACCINE (COVID VACCINE) for covid-19 prophylaxis.

Additional subject notes included No patient history was reported. Concomitant products included formoterol fumarate, mometasone furoate (Zenhale), tiotropium bromide (Spiriva Respimat) and salbutamol (Ventolin).

On [redacted]2022, the patient started mepolizumab (subcutaneous) 100 mg (see dose text), mepolizumab autoinjector device, mepolizumab (subcutaneous) 100 mg (see dose text) and mepolizumab autoinjector device. In [redacted]2022, the patient received Canadian influenza vaccine Quadrivalent 2022-2023 season and COVID VACCINE. On [redacted]2022, 38 days after starting mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device and less than a week after receiving Canadian influenza vaccine Quadrivalent 2022-2023 season, the patient experienced coronavirus test positive and coronavirus infection. On an unknown date, the patient experienced lung cancer (serious criteria death and GSK medically significant), chronic obstructive pulmonary disease (serious criteria death), lung infection (serious criteria hospitalization and GSK medically significant), tiredness (serious criteria hospitalization), increased shortness of breath (serious criteria hospitalization), rhonchi (serious criteria hospitalization), bronchitis and exertional dyspnea. The subject was treated with antibiotics nos (Antibiotics (Brand Names Not Known)), ciprofloxacin, meropenem and prednisone. On [redacted]2023, the outcome of the lung cancer and chronic obstructive pulmonary disease were fatal. On an unknown date, the outcome of the lung infection, tiredness, increased shortness of breath, rhonchi and exertional dyspnea were not recovered/not resolved and the outcome of the coronavirus test positive, coronavirus infection and bronchitis were unknown. The subject died on [redacted]2023. The reported cause of death was chronic obstructive pulmonary disease and lung cancer.

It was unknown if the reporter considered the lung cancer, chronic obstructive pulmonary disease, tiredness, increased shortness of breath, rhonchi, bronchitis, coronavirus test positive, coronavirus infection and exertional dyspnea to be related to mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device. The reporter considered the lung infection to be unrelated to mepolizumab, mepolizumab autoinjector device, mepolizumab and mepolizumab autoinjector device. It was unknown if the reporter considered the lung cancer, chronic obstructive pulmonary disease, tiredness, increased shortness of breath, rhonchi, coronavirus test positive, coronavirus infection and exertional dyspnea to be related to Canadian influenza vaccine Quadrivalent 2022-2023 season. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Additional Information:
GSK Receipt date: [redacted]2022
Reporter's Comment: This report was received from consumer via Nucala Patient Support Program (Vista). Mepolizumab the patient received was Nucala and its frequency was every 4 weeks. On [redacted]2022 patient called to inform that she currently had a lung infection and was taking antibiotics. No further information was provided.

Follow-up information received on [redacted]2022
Reporter's Comments: This case was received from Nucala patient support program (Vista). The Mepolizumab took by patient was Nucala (every 4 weeks). Patient was on Ciprofloxacin for 7 days for bronchitis. Did not consent to contact. No further information provided.
Summary of Changes: Suspect product, event, treatment medication added

Follow up information was received on [redacted]2022
Reporters comment-Patient mentioned having a lung infection. Feeling tired, more Shortness of breath, rhonchi on expiration. Spent some time in the hospital. Is on Meropenem 2g IV for 7days (until [redacted] & Prednisone. Received her flu plus COVID shot last week of [redacted] Tested COVID positive on [redacted] Saw her MD yesterday [redacted] and will see him again Monday [redacted]
TTO of coronavirus test positive and coronavirus infection was less than a week with Covid-19 vaccine, TTO of tiredness, increased shortness of breath and rhonchi was less than a month with Flu vaccine and Covid-19 vaccine. It was unknown if the reporter considered the tiredness, increased shortness of breath, rhonchi, coronavirus test positive and coronavirus infection to be related to Covid-19 vaccine.
Summary of changes-event added, co suspect added , treatment medication added, lab data added.

Follow up information was received on [redacted]2023
Reporters comment: Post infusion report Patient calm. Mentioned there had not been any changes in her health status. Still felt SOB (Shortness of breath) on exertion. Had a follow up appointment with her doctor this week. Husband present. Patient was stable upon departure. It was unknown if the reporter considered the exertional dyspnea to be related to COVID-19 VACCINE .
Summary of changes: event added.

Follow-up information received on [redacted]2023
Reporter comments: Nurse was able to get a hold of the patient's husband who unfortunately notified that, the patient passed away the day before morning. He mentioned that, it was due to complications of her lung cancer and COPD, but was unable to give more details. It was unknown if the reporter considered the lung cancer, chronic obstructive pulmonary disease to be related to COVID-19 vaccine.
Summary of Changes: Product tab, event tab and narrative updated.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (daughter died after taking Moderna) in an adult female patient who received mRNA-1273 BIVALENT .222 (SPIKEVAX BIVALENT (ORIGINAL / OMICRON BA.4/5)) (batch no. ASKU) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT .222 (SPIKEVAX BIVALENT (ORIGINAL / OMICRON BA.4/5)) (unknown route) 1 dosage form. Death occurred on [redacted] 2022 The patient died on [redacted] 2022. The cause of death was not reported. An autopsy was performed, but no results were provided.

DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available):
In [redacted] 022, Autopsy: Waiting on the autopsy results.

For mRNA-1273 BIVALENT .222 (SPIKEVAX BIVALENT (ORIGINAL / OMICRON BA.4/5)) (Unknown), the reporter did not provide any causality assessments.

Concomitant product use was not provided by the reporter.

Unknown if patient received any other vaccines in the 4 weeks prior to COVID-19 vaccine.

Reporter was waiting on the autopsy results from patient.

Treatment information was not provided.
Company comment-This spontaneous case concerns an adult female, with no medical history reported, who experienced the unexpected, Fatal serious (medically significant) event of death after receiving an unspecified dose of Spikevax Bivalent .222 (Original/Omicron BA.4/5) vaccine. Latency cannot be assessed since exact vaccination date was not disclosed. Death occurred on [redacted] 022. An autopsy was performed reports not available. The reported cause of death was unknown. It was reported that 'daughter died after taking Moderna/waiting on the autopsy results from my daughter'. No further clinical information was available for review. The benefit-risk relationship of Spikevax Bivalent .222 (Original/Omicron BA.4/5) vaccine is not affected by this report.

Reporter's comments (B.5.2)

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (Unknown cause of death) in a female patient of an unknown age who received mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (unknown route) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. An autopsy was performed, but no results were provided.

The action taken with mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Unknown) was unknown.

For mRNA-1273 BIVALENT (SPIKEVAX BIVALENT) (Unknown), the reporter did not provide any causality assessments.

No concomitant medication provided.
No treatment medication provided.

Company comment:
This spontaneous case concerns a female patient of unknown age, with no medical history reported, who experienced the fatal unexpected serious event of Death that occurred unknown days after receiving a dose of mRNA-1273 bivalent BA.1 vaccine in covid-19 vaccination series. The reported cause of death and date of death was unknown. Autopsy was performed, however the report was not available. No further information on patients' medical history, circumstances leading to death, exact cause of death, concomitant medications, additional vaccination details were provided. The benefit-risk relationship of mRNA-1273 bivalent BA.1 vaccine is not affected by this report.

Reporter did not allow further contact

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a physician and describes the occurrence of SUDDEN DEATH (Sudden death) in a 72-year-old male patient who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below.

Concurrent medical conditions included COPD.

On an unknown date, the patient received first dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. On an unknown date, the patient experienced SUDDEN DEATH (Sudden death) (seriousness criteria death and medically significant) and DYSPNOEA (Short of breath). The patient died on an unknown date. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, DYSPNOEA (Short of breath) outcome was unknown.

For mRNA-1273 (Moderna CoviD-19 Vaccine) (Unknown), the reporter did not provide any causality assessments.

Concomitant and treatment medications were not reported.

One presumed vaccine induced sudden death (in a 72-year-old patient With COPD). This patient complained of being short of breath continually after receiving the vaccine and died very suddenly and unexpectedly on day 24 after the vaccine. Patient had no history of cardiovascular disease.

Company comment: This fatal regulatory authority case concerns a 72-year-old male patient, with chronic obstructive pulmonary disease but no history of cardiovascular disease, who experienced dyspnoea continually after receiving the first dose of mRNA-1273 vaccine and suddenly died (unexpected and serious due to medically significant and death) 24 days after vaccination. The events were reported with no onset date and the vaccination dates were not reported either; hence, latency could not be properly assessed. The reported cause of death was not reported. It is unknown if an autopsy was performed. No further clinical information was available for medical review. Patient's chronic obstructive pulmonary disease could be a confounder for dyspnoea and could be a risk factor for his sudden death. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report.

This case was linked to US-MODERNATX, INC.-MOD-2023-695829, CA-MODERNATX, INC.-MOD-2023-695941 (E2B Linked Report).

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP).

A 70-year-old male patient received BNT162b2 (COMIRNATY), on [redacted]021 as dose 2, single (Batch/Lot number: unknown) at the age of 70 years for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Pfizer (Dose Number: 1; Lot number unknown), for COVID-19 immunization.
The following information was reported: DEATH (death, hospitalization, medically significant) with onset [redacted]2021, outcome "fatal". The patient was hospitalized for death (hospitalization duration: 21 day(s)). The patient underwent the following laboratory tests and procedures: SARS-CoV-2 test: unknown result. Therapeutic measures were taken as a result of death. The patient date of death was [redacted]2021. The reported cause of death was unknown. It was not reported if an autopsy was performed.

Clinical course: No known drug allergy. Upon FU on 07Feb2023 Reporter clarified name of reporter/patient. (Confirmed that his brother who passed away was PRIVACY).

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.

Follow-up (07Feb2023): This is a spontaneous follow-up report received from a contactable consumer (patient's brother). Updated information included: reporter tabl (last name), patient's name and additional information added.
Follow-up (26Mar2023): Follow-up attempts are completed. No further information is expected.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

NON-INTERVENTIONAL POST-MARKETING STUDY - PROTOCOL TITLE NOT AVAILABLE

This is a non-interventional study report received from a contactable reporter(s) (Other HCP) from Regulatory Authority. Regulatory number: E2B_05742627 (Health Canada). Other Case identifier(s): CA2022103680 (Unknown MAH). (Linked or duplicate Regulatory number: E2B_03837154, E2B_02776365, E2B_01954979, E2B_04638235).

A 77-year-old female patient received COVID-19 Vaccine - Manufacturer Unknown, as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation; mepolizumab (MEPOLIZUMAB), (Batch/Lot number: unknown) at 100 mg, subcutaneous for asthma. The patient's relevant medical history was not reported. Concomitant medication (s) included: FLOVENT unknown; GLYCOPYRRONIUM BROMIDE;INDACATEROL MALEATE unknown; PREDNISONE unknown; VENTOLIN [SALBUTAMOL] unknown.
The following information was reported: DEATH (death, hospitalization, medically significant), outcome "fatal"; DYSPNOEA (death, hospitalization, medically significant), outcome "fatal"; HYPOTENSION (death, hospitalization, medically significant), outcome "fatal"; LOSS OF CONSCIOUSNESS (death, hospitalization, medically significant), outcome "fatal". The action taken for mepolizumab was unknown. The date and cause of death for the patient were unknown.

The reporter's assessment of the causal relationship of "death", "dyspnoea", "hypotension" and "loss of consciousness" with the suspect product(s) COVID-19 Vaccine - Manufacturer Unknown was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the available information and close temporal association, a possible causal relationship cannot be excluded between the suspect vaccine BNT162b2 and the reported events death, hypotension, dyspnea, loss of consciousness.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP) from medical information team.

A male patient received BNT162b2 (BNT162B2), in 2021 as dose 2, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (Dose 1, Single, Unknown manufacturer), for Covid-19 immunization.
The following information was reported: SYNCOPE (medically significant) with onset 2021, outcome "unknown", described as "He collapsed from low platelets"; BONE MARROW DISORDER (non-serious) with onset 2021, outcome "unknown", described as "emanating from his bone marrow"; EPISTAXIS (non-serious) with onset 2021, outcome "unknown", described as "haemorrhages from his nasal passages"; PROTEIN TOTAL ABNORMAL (non-serious) with onset 2021, outcome "unknown", described as "strange proteins"; ASSISTED SUICIDE (death), outcome "fatal", described as [redacted] NEOPLASM MALIGNANT (medically significant), outcome "unknown", described as "unidentified blood cancer"; LEUKAEMIA (medically significant), outcome "unknown", described as "blood cancer"; PAIN (non-serious), outcome "unknown", described as "pain was unbearable"; PLATELET COUNT DECREASED (non-serious), outcome "unknown", described as "low platelets". The patient underwent the following laboratory tests and procedures: Platelet count: (2021) Low; Protein total abnormal: (2021) "strange proteins" filling up quickly in his blood. The patient date of death was unknown. Reported cause of death: [redacted], "He was [redacted]. It was not reported if an autopsy was performed.

Clinical course: Reporter stated that her child's grandfather who was my father-in-law had sudden adverse reactions after the second "covid-19" injection in 2021. He collapsed from low platelets, haemorrhages from his nasal passages, and was diagnosed with accelerated "unidentified blood cancer". The physician told us that he had "strange proteins" filling up quickly in his blood, emanating from his bone marrow. Before this, her child's grandfather was living happily and independently at home. He was [redacted] called [redacted] because his pain was unbearable and everyone in his professional care, said they could not help him. It was obvious that he was a victim of the worldwide experimental drug trial. My father in-law's consent form had gone missing and did not have access to his lot number in order to file an adverse reaction report on behalf of the family. The patient date of death was unknown. Reported cause of death: "He was [redacted]. It was not reported if an autopsy was performed. Reporter child's grandfather who was his father in law had sudden adverse reactions after the second "covid-19" injection in 2021. He collapsed from low platelets, haemorrhages from his nasal passages, and was diagnosed with accelerated "unidentified blood cancer". The physician told us that he had "strange proteins" filling up quickly in his blood, emanating from his bone marrow. Before this, his child's grandfather was living happily and independently at home. He was [redacted] because his pain was unbearable and everyone in his professional care, said they could not help him. It was obvious that he was a victim of the worldwide experimental drug trial. His father in law's consent form has gone missing, and he do not have access to his lot number in order to file an adverse reaction report on behalf of the family.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (06Feb2023 and 26Jan2023): This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP) from medical information team and report to notify that the case PV202300017827 and 202300041482 are duplicates. All subsequent follow-up information will be reported under manufacturer report number PV202300017827.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP). The reporter is the parent.

An 80-year-old female patient (not pregnant) received BNT162b2 (BNT162B2), on [redacted]2022 as dose 3 (booster), single (Batch/Lot number: unknown) at the age of 80 years, in left arm for covid-19 immunisation. The patient's relevant medical history included: "Diabetes mellitus" (unspecified if ongoing). Concomitant medication(s) included: FENOFIBRAT (ongoing); INSULIN (ongoing); LISPRO INSULIN (ongoing); TWYNSTA (ongoing); VITAMIN C ACID (ongoing); VITAMIN D 2000 (ongoing); ZINC (ongoing). Vaccination history included: pfizer covid-19 comirnaty mrna pb (Dose Number: 2, Batch/Lot No: EX0904, Location of injection: Leg Left), administration date [redacted]2021, for COVID-19 immunisation; pfizer covid-19 comirnaty mrna pb (Dose Number: 1, Batch/Lot No: EP6775, Location of injection: Arm Left), administration date: [redacted]2021, for COVID-19 immunisation.
The following information was reported: FEELING ABNORMAL (non-serious) with onset [redacted]2022, outcome "unknown", described as "Brain fog"; MYOCARDIAL INFARCTION (death, medically significant) with onset [redacted]2022, outcome "fatal", described as "Massive heart attic"; AMNESIA (non-serious) with onset [redacted]2022, outcome "unknown", described as "Memory loss"; HEART RATE INCREASED (non-serious) with onset [redacted]2022, outcome "unknown", described as "Rapid heart Rate"; DIABETES MELLITUS INADEQUATE CONTROL (medically significant) with onset [redacted]2022, outcome "unknown", described as "Uncontrolable Blood sugar". The patient underwent the following laboratory tests and procedures: Heart rate: ([redacted]2022) Rapid, notes: Rapid heart Rate. Therapeutic measures were taken as a result of myocardial infarction, diabetes mellitus inadequate control, heart rate increased, feeling abnormal, amnesia. The patient date of death was [redacted]2022. Reported cause of death: "Massive heart attic". No autopsy was performed.

Clinical course: Pfizer have permission to contact the reporter about this event. Pfizer have permission to contact your/the patient healthcare provider about this report. Facility where the most recent COVID-19 vaccine was administered was Nursing Home/Senior Living Facility. Prior to vaccination, the was patient diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Reported Event: Rapid heart Rate, Uncontrol able Blood sugar, Brain fog, Memory loss and Death. The patient received treatment for the adverse event was give insulin to bring levels down.

The information on the batch/lot number for BNT162b2 has been requested and will be submitted if and when received.
Follow-up (19Feb2023): Follow-up attempts are completed. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from contactable reporter(s) (Consumer or other non HCP).

A patient (no qualifiers provided) received BNT162b2 (COMIRNATY NOS), as dose number unknown, single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: DEATH (death), 20 days after the suspect product(s) administration, outcome "fatal", described as "was vaccinated and died 20 days after". The patient date of death was unknown. Reported cause of death: "was vaccinated and died 20 days after". It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (02Feb2023): This is a spontaneous follow-up report received from a contactable consumer. Updated information: New reporter added. Follow-up attempts are completed. No further information is expected.

Amendment: This follow-up report is being submitted to amend previously reported information: updated narrative to remove additional information regarding patient with coma (reporter with no firsthand knowledge).

Subject: Vaccine

Dear [redacted] and Minister Hajdu,

[redacted] my partner, had his first Covid-19 vaccine with no problem. The 2nd vaccine he had, he developed big problems! He went to his doctor, Dr. [redacted] The doctor felt he needed a CPap machine and ordered it. [redacted] already had been involved with them at [redacted] hospital and they had done tests. The doctor suggested he buy one and we spent a couple of days trying to find a machine. I found a machine and we tried to order it. They contacted the [redacted] hospital and we waited for the machine. They needed the instruction on how to set it up. I contacted them and the staff at the hospital said they couldn't do it. Unfortunately, it was on friday and everyone was closed to get this machine. So we couldn't get one. I had to take him to the [redacted] hospital but it was too late on Saturday morning as he was having big problems breathing and he died Saturday night.

[redacted] died from taking the second dose of the vaccine. He was very healthy for his age till he got the vaccine. The vaccine is very dangerous! I think there should be more concern about who takes it.

I spent the last half of my nursing career doing halftime palliative care with Home Care. I had a few SARS clients then and none of them died. I am sure it has become more virulent but the way it is being treated is very concerning. [redacted] should not have died.

Sincerely,
[redacted] BN

Hi EFAX,

Would you be able to enter in this report and assign an AER number for a correspondence I'm working on. CC-ing Emily in case it gets actioned when I'm away.

Thanks,
Zachary

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable reporter(s) (Consumer or other non HCP).

A 77-year-old female patient received BNT162b2 (BNT162B2), as dose 3 (booster), single (Batch/Lot number: unknown) for covid-19 immunisation. The patient's relevant medical history and concomitant medications were not reported. Vaccination history included: Covid-19 vaccine (Primary Immunization series complete; unknown manufacturer), for COVID-19 immunization.
The following information was reported: MYOCARDIAL INFARCTION (death, medically significant) with onset [redacted]2022, outcome "fatal", described as "Your poison so-called covid vaccines killed my mother / She dropped dead of a heart attack / She died of a massive heart attack shortly after her 3rd dose". The patient date of death was [redacted]2022. Reported cause of death: "Your poison so-called covid vaccines killed my mother / She dropped dead of a heart attack". It was not reported if an autopsy was performed.

Clinical course: Reporter's mother was a healthy 77-year-old & never had heart problems in her life. She dropped dead of a massive heart attack on [redacted]2022 shortly after her third shot. She had no known heart conditions previously diagnosed.

Follow-up attempts are completed. No further information is expected.

Follow-up (20Feb2023): This is a spontaneous follow-up report received from a Consumer or other non HCP.
Updated Information: course of events and medical history details.
Follow-up attempts are completed. No further information is expected.

MAH - PFIZER

Patient (B.1)

Patient Initial (B.1.1)	Sex (B.1.5)	Patient height (B.1.4)	Patient weight (B.1.3)
UNKNOWN	Female		
Date of birth (B.1.2.1)	**Age group (B.1.2.3)**		**Onset Age (B.1.2.2)**
			76 Years
Gestation Period (B.1.2.2.1)		**LMP date (B.1.6)**	

GP medical record no. (B.1.1.1a)	Specialist record no. (B.1.1.1b)	Hospital record no. (B.1.1.1c)	Investigation no. (B.1.1.1d)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Patient death (B.1.9)

Date of death (B.1.9.1)	Was autopsy done? (B.1.9.3)
	Unknown

Patient death cause (B.1.9.2)

MedDRA version for cause (B.1.9.2.a)	Reported cause(s) (B.1.9.2.b)
26.0	Blood pressure increased
26.0	Chest pain
26.0	Diarrhoea
26.0	Dyspnoea exertional
26.0	Eye irritation
26.0	Heart rate increased
26.0	Oropharyngeal pain
26.0	Oxygen saturation decreased
26.0	Pneumonia
26.0	Unknown cause of death
26.0	Vaccination site pain
26.0	Wound

Patient autopsy (B.1.9.4)

MedDRA version for autopsy-determined cause(s) of death (B.1.9.4a)	Autopsy-determined cause(s) of death (B.1.9.4b)

Drug (B.4)

Drug characterization (B.4.k.1)	Medicinal product name (B.4.k.2.1)	
Suspect	COVID-19 VACCINE	
Active Substance names (B.4.k.2.2)		
Country drug obtained (B.4.k.2.3)	Batch/lot no. (B.4.k.3)	
Canada		
Holder and authorization/application no. of drug (B.4.k.4)		
Country of authorization/application: Canada		
Structured dosage info (B.4.k.5)		
Dosage text (B.4.k.6)		
DOSE NUMBER UNKNOWN, SINGLE		
Pharmaceutical form (B.4.k.7)	Route of administration (B.4.k.8)	Parent route of admin (B.4.k.9)
	Unknown	
Gestation period (B.4.k.10)	MedDRA version (B.4.k.11a)	Indication (B.4.k.11b)
	26.0	COVID-19 immunisation
Start date of drug (B.4.k.12)	Drug end date (B.4.k.14)	

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Start period (B.4.k.13.1)	**Last period (B.4.k.13.2)**	**Duration of drug Admin (B. 4.k.15)**
Action(s) taken with drug (B.4.k.16) Not Applicable	**Did reaction recur on readministration? (B.4.k.17.1)**	
Additional info (B.4.k.19)		
Drug Recurrence (B.4.k.17)		
MedDRA version (B.4.k.17.2a)	**Which reaction(s)/event(s) recurred? (B.4.k.17.2b)**	
Drug Reaction relatedness (B.4.k.18)

Summary (B.5)

Case narrative (B.5.1)

This is a non-interventional study report received from contactable reporter(s) (Other HCP and Consumer or other non HCP) from Regulatory Authority. Regulatory number: E2B_05977659 (Health Canada). Other Case identifier(s): CA2022034554 (Unknown MAH).

A 76-year-old female patient received BNT162b2 (COVID-19 VACCINE NOS MANUFACTURER UNKNOWN), as dose number unknown, single (Batch/Lot number: unknown), as dose number unknown, single (Batch/Lot number: unknown), as dose number unknown, single (Batch/Lot number: unknown) and as dose number unknown, single (Batch/Lot number: unknown), all unknown for covid-19 immunisation; influenza vaccine (INFLUENZA VACCINE), (Batch/Lot number: unknown) for prophylaxis; mepolizumab (MEPOLIZUMAB), (Batch/Lot number: unknown) at 100 mg, subcutaneous for asthma; mepolizumab (MEPOLIZUMAB), first regimen (Batch/Lot number: unknown) at 100 mg and second regimen (Batch/Lot number: unknown) at 100 mg, all subcutaneous for asthma. The patient's relevant medical history was not reported. Concomitant medication(s) included: PREDNISONE unknown; AZITHROMYCIN unknown; CEPHALEX [CEFALEXIN] unknown. The following information was reported: DEATH (death, hospitalization, medically significant), outcome "fatal"; BLOOD PRESSURE INCREASED (death, hospitalization, medically significant), outcome "fatal"; CHEST PAIN (death, hospitalization, medically significant), outcome "fatal"; DIARRHOEA (death, hospitalization, medically significant), outcome "fatal"; DYSPNOEA EXERTIONAL (death, hospitalization, medically significant), outcome "fatal"; EYE IRRITATION (death, hospitalization, medically significant), outcome "fatal"; VACCINATION SITE PAIN (death, hospitalization, medically significant), outcome "fatal", described as "Injection site pain"; OROPHARYNGEAL PAIN (death, hospitalization, medically significant), outcome "fatal"; OXYGEN SATURATION DECREASED (death, hospitalization, medically significant), outcome "fatal"; PNEUMONIA (death, hospitalization, medically significant), outcome "fatal"; WOUND (death, hospitalization, medically significant), outcome "fatal"; HEART RATE INCREASED (death, hospitalization, medically significant), outcome "fatal"; INAPPROPRIATE SCHEDULE OF PRODUCT ADMINISTRATION (non-serious), outcome "unknown". The action taken for mepolizumab and mepolizumab was unknown. The date and cause of death for the patient were unknown. It was not reported if an autopsy was performed.

The reporter's assessment of the causal relationship of "death", "blood pressure increased", "chest pain", "diarrhoea", "dyspnoea exertional", "eye irritation", "injection site pain", "oropharyngeal pain", "oxygen saturation decreased", "pneumonia", "wound" and "heart rate increased" with the suspect product(s) BNT162b2 was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Follow-up (18Apr2023): This is a non-interventional study follow up report received from a new contactable Other Health Professional from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number E2B_05977659. (Linked Regulatory Number E2B_03305971, E2B_03369525). This information was initially reported to Health Canada between 07Oct2022 and 12Dec2022 from an unknown Market Authorization Holder AER# CA2022034554.

Updated information included: added the seriousness criteria (death), new products: Influenza vaccine, azithromycin and cephalexin, new events: death, heart rate increased and Inappropriate schedule of product administration, new reporter (other HCP), removed the event 'hospitalization'.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on available information and known drug safety profile, a reasonable possibility that the events diarrhea and injection site pain are related to COVID-19 Vaccine- Manufacturer Unknown (BNT162B2) cannot be excluded. Conversely, all other events are assessed as unrelated to COVID-19 Vaccine. Lacking information on circumstances surrounding death and the cause of death, the case is managed as if there was a reasonable possibility that this patient's death is related to administration of the suspect product. This case will be reassessed should additional information becomes available.

Test (B.3)

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report was received from a consumer. The report concerning a male patient of Caucasian ethnic origin (age 45 years, height 69 in, weight 175 lb).

No medical history concomitant products were reported.

On an unknown date, the patient received Astrazeneca Covid-19 Vaccine (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number ASKU), via intramuscular route, for an unknown indication.

On an unknown date, the patient experienced DEATH 0 (Preferred term- Death).

It was unknown if any action was taken with Astrazeneca Covid-19 Vaccine.

On [redacted] 2021, the patient died (MedDRA PT: Death).

An autopsy was performed. The cause of death was death 0 (confirmed at autopsy).

The reporter assessed the event DEATH 0 was considered to be serious due to seriousness criteria of death and important medical event.

The reporter assessed that there was a reasonable possibility of a causal relationship between Astrazeneca Covid-19 Vaccine and the following event: death 0.

All required follow-up attempts have been completed to obtain the Lot / Batch number for specify the biologic product, however the Lot / Batch number was not received.

Summary of follow-up information received by AstraZeneca on 18-Apr-2023 from consumer via spontaenous source: Summary of unsuccessful Lot/Batch number attempts added. Narrative updated.

AUTOPSY DETERMINED CAUSE OF DEATH: DEATH #0
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case concerns a 45-year-old male vaccinee with fatal event of Death in association with AZD1222. The cause of death was reported as DEATH #0, that was confirmed as such at autopsy. Due to limited information on baseline health condition of the patient before vaccination, relevant medical history, concomitant medication, date of vaccination, circumstances surrounding the event, risk factors, concomitant medication, medication history, detailed etiological and diagnostic workup, details of the autopsy report with confirmed final diagnosis, the evaluation did not find evidence to suggest a causal relationship between the fatal event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a consumer and describes the occurrence of DEATH (My wife had a third jab and she passed away a week later) in a 77-year-old female patient who received mRNA-1273 BIVALENT .222 (SPIKEVAX BIVALENT (ORIGINAL / OMICRON BA.4/5)) for COVID-19 prophylaxis.

No Medical History information was reported.

On an unknown date, the patient received third dose of mRNA-1273 BIVALENT .222 (SPIKEVAX BIVALENT (ORIGINAL / OMICRON BA.4/5)) (unknown route) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

For mRNA-1273 BIVALENT .222 (SPIKEVAX BIVALENT (ORIGINAL / OMICRON BA.4/5)) (Unknown), the reporter did not provide any causality assessments.

No concomitant medications were reported.
No treatment information was reported.

Company comment: This spontaneous case reported by a consumer, concerns a 77-year-old female patient with no reported medical history, who met with a fatal outcome (PT: Death). Death occurred about a week after administration of third dose of mRNA-1273.222 bivalent vaccine. Other details are not available for medical review. Exact cause of death was not reported. It is unknown if an autopsy was performed. The benefit-risk relationship of mRNA-1273.222 bivalent vaccine is not affected by this report.

This case was linked to US-MODERNATX, INC.-MOD-2023-714580 (E2B Linked Report).

Summary (B.5)

Case narrative (B.5.1)

This serious case was reported by a consumer via other manufacturer and described the occurrence of unknown cause of death in a 96-year-old female patient who received Herpes zoster (Shingles vaccine) for prophylaxis.

Co-suspect products included COVID-19 VACCINE (COVID VACCINE) for prophylaxis.

On [redacted] 2021, the patient received Shingles vaccine. On an unknown date, the patient received COVID VACCINE. On [redacted] 2021, 2 days after receiving Shingles vaccine, the patient experienced covid-19 (Verbatim: had covid). On [redacted] 2022, the patient experienced unknown cause of death (Verbatim: On [redacted] 2022 she died) (serious criteria death and GSK medically significant). The outcome of the covid-19 was not reported. The patient died on [redacted] 2022. The reported cause of death was unknown cause of death.

It was unknown if the reporter considered the unknown cause of death and covid-19 to be related to Shingles vaccine.

It was unknown if the company considered the unknown cause of death and covid-19 to be related to Shingles vaccine.

Additional Information:
GSK Receipt Date: 06-APR-2023
The reporter had mentioned that when her mother had received a shingles vaccine and 2 days later her mother had covid and on [redacted] 2022, her mother died.
The reporter stated that, her mother had received all of her covid vaccines up till that point.
31 days after receiving Shingles vaccine, the patient experienced unknown cause of death.
It was unknown if the reporter had considered the adverse event to be related to the COVID -19 Vaccine.
The follow-up was not possible as per the process convention.
This case was linked with CA2023AMR051164, which was reported by same reporter.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer. The report concerning a patient of unknown gender (age not provided) of Unknown ethnic origin.

No medical history was reported.

No concomitant products were reported.

On an unknown date, The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for covid-19 immunisation.

On an unknown date, the patient experienced blood clotting (preferred term: Thrombosis).

It was unknown if any action was taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml.

It was not known whether an autopsy was performed. On an unspecified date, The patient died from the event of blood clotting.

The cause of death was blood clotting.

The reporter assessed the event blood clotting to be serious due to seriousness criteria of death.

The reporter considered that there was a reasonable possibility of a causal relationship between Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml and the following event of blood clotting.CAUSE OF DEATH: BLOOD CLOTTING
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Thrombosis is not listed in company core data sheet of AZD1222. The cause of death was reported as Blood clotting. Due to limited information on vaccinee's age and gender, nature and circumstances leading to the events, date of vaccination, event onset date, relevant medical and family history, possible risk factors, detailed etiologic and diagnostic workup, the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer, concerning a patient of unknown age, gender and ethnic origin.

No medical history was reported. No concomitant products were reported.

On an unknown date, the patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for covid-19 immunisation.

On an unknown date, the patient started treatment with Covid-19 Vaccine Nos Manufacturer Unknown (bnt162b2) (tozinameran) Dose Unknown, unknown route for covid-19 immunisation.

On an unknown date, the patient experienced blood clotting (preferred term: Thrombosis).

It was unknown if any action was taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml and Covid-19 Vaccine Nos Manufacturer Unknown (bnt162b2).

On an unspecified date, the patient died from the event of blood clotting.

It was not known whether an autopsy was performed. The cause of death was blood clotting.

The reporter assessed the event of blood clotting to be serious due to seriousness criteria of death.

The reporter considered that there was a reasonable possibility of a causal relationship between Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml and the following event: blood clotting.CAUSE OF DEATH: BLOOD CLOTTING
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Thrombosis is not listed in the company core data sheet of AZD1222. The case of death was reported as BLOOD CLOTTING. Due to limited information on baseline health condition before vaccination, relevant family history, concurrent diseases, relevant medication history, date of vaccination, event onset date, details and circumstances surrounding the event, possible risk factors (obesity, injury or surgery, smoking, diabetes, high blood pressure, high cholesterol and immobility) and detailed diagnostic and etiologic workup (detailed autopsy report), the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Canada Vigilance AER#:	000969752 (0)	Page#4

Summary (B.5)

Case narrative (B.5.1)

Resident had been increasingly lethargic the past month which resulted in low oral intake, specifically over the past three weeks. But when son came to visit on [redacted]2021 resident perked up and was alert, talkative, and drank an entire strawberry milkshake. Resident continued to be alert and talkative on [redacted]by HCAs.
The booster shot itself may not be responsible for the death, but I felt it was appropriate to file a report being that the drastic decline in health occurred within 24 hours of thr vaccine. She may have had a systemic reaction that her body could not recover from given her poor health prior to the third dose of the Pfizer vaccine but the family did not want an autopsy

Serious Other Explain:

Reaction 1
Outcome: Died
Reaction Start Date:
Reaction End Date:
Reaction Description: Resident received covid-19 Pfizer booster on [redacted]2021. The morning of [redacted] 2021 she was found to be unresponsive to any stimuli, pale and waxy in appearance, and, eyes sunken.
Palliative orders were received at 0915, resident was pronounced dead at 2150 on [redacted]2021.

Suspect Product 1
DIN #/NPN #:
Product Name: Pfizer Covid-19 booster shot
Strength:
Strength other:
Dosage form: Liquid
Manufacturer: Pfizer
Lot #:
Expiry date:
Product start date: 2021[redacted]
Product end date:
Dose:
Frequency:
Route of administration: Intramuscular
Route of administration - Other:
Indication: Booster shot
Reported to Mfr: No
Date reported to Mfr:
Mfr Reference number:
Drug action taken: Not applicable
Dechallenge: N/A
Rechallenge: N/A

Concomitants: Resident had taken regularly scheduled medications up until the evening of [redacted]2021

2 | Serious adverse drug reaction reporting form for hospitals

* = required, if known (if information is in the control of or reasonably accessible by the hospital for mandatory reporting)
** = required (hospital is exempt from mandatory reporting if this information is unavailable)
Specific field instructions can be found at the end of the form. Submission of a report does not constitute an admission that medical personnel or the suspect product(s) caused or contributed to the serious adverse drug reaction(s).

A. General information

1. Type of report*	2. Health Canada reference no. (For follow-up reports only)
☒ Initial ☐ Follow-up	

3. Organization file no.	4. Date report submitted	5. Documentation date*
	2021-10-06	

6. a. Organization contact first name* / b. Last name*	7.a. Phone no.* (705) 649-3181 ext. [redacted] / b. Email [redacted] / c. Fax [redacted]
[redacted] / [redacted]	

8. Organization name* Waypoint centre for Mental Health Care

9. Source of report (profession)	10. Health Canada institutional ID (If ID provided, no need to provide address)
Pharmacist	

11. Address	12. City	13. Province / Territory	14. Postal code
[redacted]	[redacted]	[redacted]	[redacted]

15. Reason for seriousness* (explain (f) in section F)

☒ (a) Death (yyyy-mm-dd) 2021-[redacted] ☐ (b) Life-threatening ☐ (c) Disability ☐ (d) Congenital malformation
☐ (e) Caused/prolonged in-patient hospitalization ☐ (f) Required medical intervention to avoid any of (a) to (e)

B. Patient information

1. Patient ID (e.g. initials, record no.)	2. Sex**	3. Age**	4. Height	5. Weight
[redacted]	Male	77 Year(s)	154 cm or ft in	89 kg or lbs oz

6. Known medical conditions and relevant lifestyle factors* (e.g. hepatic and/or renal impairment, diabetes mellitus, current pregnancy, tobacco, cannabis or alcohol use, recreational drug use, etc.).

Patient had Liver cancer with Bilateral pulmonary mets, Ascitis, Congestive Heart failure, Emphysema-COPD, Kidney dysfunction,Anemia, Hypothyroidism. Patient was palliative status

7. Known allergies* (e.g. food, drugs, environmental, etc.; provide details).

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

3 | Serious adverse drug reaction reporting form for hospitals

C. Serious adverse drug reaction(s)

1. Did the patient recover?* (please choose one of the following)	2. Reaction start date*	3. Reaction end date*
☐ Recovered ☐ Recovering ☐ Not recovered ☒ Died ☐ Unknown ☐ Recovered with sequelae		

4. Description of the serious adverse drug reaction(s)**

No serious adverse reaction was observed. Patient received 3rd dose of COVID vaccine on [redacted] and had 2 previous vaccines with no adverse effects. Patient was found on the floor beside his bed at 10:10am on [redacted]/21 and was unresponsive. Patient had metastatic liver cancer, was refusing treatment and was palliative. Due to palliative state, no autopsy was performed.

D. Suspect product one

If the DIN is not provided, please provide the brand name or the proper name, as well as the manufacturer name if known
This information is important for traceability of an adverse reaction to a specific suspect product

1. Drug identification number (DIN)*	2. Identifying code for urgent public health need drugs**
02509210	
3. Brand name (per product label)**	**4. Common/proper name** (active ingredient)**
Pfizer Covid-19 Vaccine -Comirnaty	TOZINAMERAN
5. Strength (per unit)	**6. Dose**
30 MCG / 0.3 ML	30 µg microgram(s)

7. Frequency
Dose administered on [redacted] @ 10:35 am

8. Dosage form (e.g. tablet, powder, liquid) injection

9. Route of administration	10. Product start date*	11. Product end date*
Intramuscular	2021-[redacted]	2021-[redacted]

12. Indication
Covid-19 Immunization dose#3

13. Lot no.	14. Expiry date
FD7206	2021/11/30

15. a. Manufacturer name
Pfizer

b. Did you also report to the manufacturer?*
☐ Yes ☒ No

c. Date reported

d. Reference no.* (if known)

16. What action was taken?
Not applicable

17. Did the reaction stop if dose was reduced or removed?
☐ Yes ☐ No ☐ Unknown ☒ N/A

18. Did the reaction return with reintroduction of the product?
☐ Yes ☐ No ☐ Unknown ☒ N/A

13. Lot no. 28195DK	14. Expiry date 2023-04-01
15. a. Manufacturer name b. Did you also report to the manufacturer?* ☐ Yes ☒ No c. Date reported d. Reference no.* (If known)	16. What action was taken? 17. Did the reaction stop if dose was reduced or removed? ☐ Yes ☐ No ☐ Unknown ☒ N/A 18. Did the reaction return with reintroduction of the product? ☐ Yes ☐ No ☐ Unknown ☒ N/A

E. Concomitant therapeutic product(s)

1. Known therapeutic product(s) taken or used at the same time the reaction occurred* (e.g. prescription and non-prescription drugs, medical devices, natural health products, etc. Include details of use if available).

No medication changes happened in the week leading up to the COVID vaccine booster dose. Medications the patient was taking were:
Fluticasone/Salmeterol (Advair 250Mcg/25Mcg Inhaler) — 2 Puffs BID
Diclofenac cream (Voltaren Emulgel 1.16%)- — topically TID
Propylene Glycol/Peg (Secaris Nasal Gel) — topically BID
Tiotropium (Spiriva 18 Mcg) 1 CAP – ———Inhale contents of 1 capsule daily.
Furosemide (Lasix or Equivalent) 20 MG TAB——3 tablets (60mg) po daily
lamoTRIgine (LaMICtal OR EQUIVALENT) 100 MG TAB— 1 tablet (100mg) po daily
lamoTRIgine (LaMICtal OR EQUIVALENT) 25 MG TAB---- 1 tablet (25mg) po daily
Levothyroxine (Synthroid) 25 MCG TAB ----- 1 tablet (25MCG) po daily
Polyethylene Glycol 3350 (Restoralax, Lax-A-Day)---- 1 PACK po daily
Pantoprazole EC (Pantoloc or Equivalent) 20 MG— 1 tablet (20mg) po QAM
Potassium Chloride Sr (Slow-K, Apo-K) 8 MEQ TAB---- 1 tablet (8 MEQ) po QAM
HYDROmorphone (Dilaudid or Equivalent) 0.5 MG HALFTAB — One Half tablet (0.5mg) po at 800 and 1400

ATIA - 19(1)

5 | Serious adverse drug reaction reporting form for hospitals

F. Additional information

1. Use this section to include details that did not fit in the previous sections' structured boxes, or related test/lab results, autopsy information, treatment details, or any other details you feel would contribute to the assessment of the serious adverse drug reaction(s).

-There were no medication changes in the week proceeding to his deceased date. Patient received his COVID vaccine booster dose on [redacted] 2021 at 10:35 am. No PRNs were administered on [redacted] 2021. No adverse reaction from the vaccine was noted for the booster dose, or the two previous administrations of the COVID vaccine.

As per records patient has Metastatic liver cancer that did apread and patient was deemed palliative, As per records patient refused oncology treatment and the treatment goal relied on comfort meeasures and palliative approach.

As per Dr [redacted] report the patient passed away from natural causes. The patient safety incident entered indicates that the patient was found on the floor next to the bed around 10:10am and was deceased. A fall out of bed is suspected.

No autopsy was performed due to the palliative status of the patient

-A causal relationship between the vaccine and the patient death is not suspected however the wording on the Health Canada website encourages reporting of incidents in the absence of a causality assessment or investigation to determine whether the therapeutic product caused the serious ADR

-Report of Adverse Event Following Immunization (AEFI) was completed and sent to the local public health unit.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

Instructions on completing the serious adverse drug reaction (ADR) reporting form for hospitals

A. General information

A1. **Initial or follow-up*:** Indicate whether the report is the first one submitted for this specific adverse drug reaction (i.e. initial) or a follow-up to a previously submitted report.

A2. **Health Canada reference number:** If the report is identified as a follow-up in A1, provide the reference number of the serious ADR report generated by Health Canada and provided to the submitter further to initial report submission.

A3. **Organization file number:** Indicate the hospital's identification number for the case. For follow-up reports, the file number should be the same as the number assigned to the initial report.

A4. **Date submitted:** Indicate the date the report was sent to Health Canada.

A5. **Documentation date*:** Indicate the date when the hospital first documented this serious ADR.

A6. **Organization contact first & last name*:** Enter the first and last name of a contact for the hospital.

A7. **Phone number, email or fax*:** Enter the telephone number, email address or facsimile number to contact in the case of follow-up.

A8. **Organization name*:** Enter the full name of the reporting hospital.

A9. **Source of report:** Indicate the profession of the hospital employee who first flagged this as a potential serious ADR.

A10. **Health Canada institutional ID:** Indicate the submitter's unique hospital identifier as assigned by Health Canada. To obtain this identifier, please contact hc.canada.vigilance.sc@canada.ca. Address details do not need to be completed if this unique number is provided.

A11. **Hospital address:** Enter the civic address for the hospital.

A12. **City:** Indicate the city in which the hospital is located.

A13. **Province/Territory:** Select the province or territory in which the hospital is located.

A14. **Postal code:** Provide the postal code of the hospital.

A15. **Reason for seriousness*:** Select a criterion that makes the report a serious adverse reaction. More than one can be selected. Enter the date of death if known.

B. Patient information

B1. **Patient ID:** Provide a patient identifier in order to readily locate the case for follow-up purposes. This can be the patient's initials or the record number. Please do not provide the full name of the patient.

B2. **Sex**:** Enter the patient's biological sex. Intersex is a term used for a variety of conditions in which a person is born with a reproductive anatomy that does not fit the typical definitions of female or male.

B3. **Age**:** Provide the patient's age at the time of the reaction.

B4. **Height:** Enter the patient's height.

B5. **Weight:** Enter the patient's weight.

B6. **Known medical conditions and lifestyle factors*:** If available, provide information on the patient's history and other known conditions.

B7. **Known allergies*:** Provide the allergies the patient is known to have experienced, whether to food, drugs, environmental components, etc.

C. Serious adverse drug reaction(s)

C1. **Recovery status*:** Indicate the outcome of the serious ADR.

C2. **Reaction start date*:** Provide the date of onset of the serious ADR. Partial dates are acceptable

C3. **Reaction end date*:** Provide the end date of the serious ADR if applicable. Do not provide this for reports involving death. Partial dates are acceptable.

C4. **Description of the serious adverse drug reaction(s)**:** List the serious adverse drug reaction(s) that the patient experienced. Please try to avoid use of acronyms in this section.

D. Suspect product(s)

Up to two suspected products may be reported on one form. Attach additional forms if there are more than two suspected products for the reported serious ADR.

Reporting of product-specific identifiers is important for traceability of an adverse reaction to a specific suspect product. The drug identification number (DIN) is a unique identifier for all drug products sold in Canada. If the DIN is unknown, biologic drugs including biosimilars can be uniquely identified by providing their brand name. Generic drugs can be uniquely identified by providing both the generic name and the manufacturer name. Please also include the lot number, if known.

D1. **Drug identification number (DIN)*:** Provide the drug identification number of the product the patient took, if available. For drugs accessed under an urgent public health need, provide the identifying code or number for the country in which the product is marketed. If the DIN is provided, it is not necessary to provide manufacturer, product name, active ingredient(s), strength, or dosage form.

D2. **Identifying code for urgent public health need drugs**:** If the drug was imported as part of the access to drugs in exceptional circumstances, provide the code or number of the drug, if any, assigned in the country in which the drug was authorized for sale.

D3. & D4. Brand name, common/proper name:** Provide the brand name as per the product label if the DIN is not known. If the brand name cannot be provided, or is not specific (e.g. an active ingredient as brand name), please provide the proper name (active ingredients) and the manufacturer name.

D5. **Strength:** Provide the amount of active ingredient per single dosage form of the drug. For example, if the patient took two tablets of a medication, please provide the strength of only one tablet. Strength is defined as the amount of an active ingredient that the product contains.

D6. **Dose:** Indicate the amount of the product taken by the patient per the dosing regimen. Dose is normally expressed as a quantity.

D7. **Frequency:** Indicate how often the dose was taken by the patient. Shorthand text, such as b.i.d., is acceptable in this field.

D8. **Dosage form:** Indicate the dosage form of the product (e.g. tablet, powder, liquid)

D9. **Route of administration:** Provide the means by which the drug entered the patient's body. The top five most common routes of administration are at the top of the dropdown list.

D10. **Product start date*:** Indicate the date on which the patient started using the product. If the exact date is not known, partial dates are acceptable.

D11. **Product end date*:** Indicate the date the patient stopped using the product, if applicable. Please only enter data in this field if it is known that the patient stopped taking the product. Partial dates are acceptable.

D12. **Indication:** Enter the therapeutic reason for use.

D13. **Lot no.:** If known, indicate the lot number(s) of the suspect product.

D14. **Expiry date:** If known, indicate the expiry date.

D15. **Manufacturer details*:** Indicate the manufacturer name of the suspect product and if the adverse reaction details were also provided to the manufacturer. If so, please also provide the date on which the case was reported to the manufacturer and the reference number if known.

D16. **Action taken:** Indicate what action was taken with the product.

D17. **Reaction stopped if dose was reduced or removed:** Indicate if the adverse reaction stopped after the suspect product was discontinued or the dose was reduced.

D18. **Reaction returned with reintroduction:** Indicate if the adverse reaction reappeared after the suspect product was reintroduced.

E. Concomitant therapeutic product(s)

E1. **Concomitant therapeutic products*:** List all known health products, other than the suspect product, the patient was taking at the same time (i.e. concomitantly) the reaction occurred. Information related to therapy details of these products is not required but encouraged. Do not include health products used to treat the reaction.

F. Additional information

F1. This section can be used to provide a narrative summary of the serious adverse drug reaction, additional information on the underlying diagnosis that is pertinent to the reaction, or information that did not fit in the structured fields that could help to determine why the reaction occurred. For serious cases involving death, this section can also be utilized to provide details on the official cause of death and autopsy results.

For more details, refer to the Guidance Document for hospitals at https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada/adverse-reaction-reporting/mandatory-hospitalreporting/drugs-devices.html

Canada Vigilance - Adverse reaction reporting program

For best results, download and open this form in a PDF reader.

Privacy notice: The personal information you provide to Health Canada is governed in accordance with the *Privacy Act*. We only collect the information Health Canada needs to administer the Canada Vigilance adverse reaction reporting program authorized under the *Department of Health Act*, section 4 and the *Food and Drug Regulations*, Section C.01.020.

Purpose of collection: Health Canada requires this information to assess adverse reaction reports, monitor the safety of health products and enforce relevant legislation where applicable. Personal information may be used to analyze general trends, report to senior management and evaluate related programs and services. Trend and safety data in a de-identified format may be communicated by a variety of risk communication tools and/or responses to inquiries. A subset of de-identified Canada Vigilance adverse reaction reporting program data is made publicly available from the Canada Vigilance adverse reaction online database.

Other uses or disclosures: Personal information may be shared within Health Canada and with the Public Health Agency of Canada, the Canadian Medication Incident Reporting and Prevention System Program (managed in partnership with the Canadian Institute for Health Information, the Institute for Safe Medication Practices Canada, and the Canadian Patient Safety Institute), and international regulatory and health product monitoring authorities, for monitoring adverse reactions. In limited and specific situations, your personal information may be disclosed without your consent in accordance with subsection 8(2) of the *Privacy Act*.

For more information: This personal information collection is described in Info Source, available online at https://www.canada.ca/en/health-canada/corporate/about-health-canada/activities-responsibilities/access-information-privacy/info-source-federal-government-employee-information.html#a26. Refer to the personal information bank HC PPU 417.

Your rights under the *Privacy Act*: In addition to protecting your personal information, the *Privacy Act* gives you the right to request access to, and correction of, your personal information. For more information about these rights, or about our privacy practices, please contact Health Canada's privacy coordinator at 613-946-3179 or hc.privacy-vie.privee.sc@canada.ca. You also have the right to file a complaint with the Privacy Commissioner of Canada if you think your personal information has been handled improperly.

Submission methods

Electronic reporting
If you are interested in submitting reports electronically (e.g. secure file transfer protocol - sFTP) to Health Canada, please email the Canada Vigilance Program at hc.canada.vigilance.sc@canada.ca

Fax
Download, complete and print the Serious adverse drug reaction reporting form for hospitals.
Send by fax at: 1-866-678-6789

ATIA - 19(1)

Raison du décès déclaré par le médecin traitant : Embolie Pulmonaire + probable, pas d'évidence de surinfection. Il est à noter que la religieuse est de niveau de soins 4, soins de confort, d'où l'origine des évaluations sommaires mentionnées ci-bas

Comme le décès est survenu moins de 7 jours suivant la 3e dose du vaccin contre la Covid et contre l'influenza, il est possible de croire qu'un lien existe. La religieuse ne présente aucun problème associé à la coagulation et n'a aucun antécédent cardiaque.

[redacted]

8h00 : Léthargie, tachypnée 32, sat 98% A.A., 138/81, pls 90, temp 36.1

14h00: Respiration rapide, faciès rouge, TA 93/46, sat 95% Air ambiant, pls 84. Jugulaire très distendue

14h30: respiration 38/min, sat 90%-95%. À l'auscultation, pas de bruits anormaux mais murmures vésiculaires audibles dans trois plages pulmonaires. Jugulaire, carotide et veines bras gch gonflées ++. fréquence cardiaque normale, auscultation cardiaque normale. Œdème aux MI. Médecin prescrit versed sous-cutané.

16h00 : Respiration 27/min mais en Cheyne-Stoke, sat 95% sur 2L/min via canule nasale. État de conscience stuporeux, présence de gémissement et d'agitation. Versed augmenté, dilaudid administré.

Ensuite entre 16h00 le [redacted] et 13h35 le [redacted] jugulaire et veine du bras gauche toujours très gonflées. Respiration cheyne-stoke., épisode d'apnée de 33 secondes, saturation variable entre 91-98% sur 2L/min. Présence de sécrétion dans la trachée, scopolamine débutée. Ensuite semble confortable avec Versed, dilaudid et scopolamine.

[redacted] 13h35 :

Décès

Suite au décès, apparition d'un grand hématome côté gauche du cou, de l'oreille à la base du cou et de 1 pouce derrière l'oreille à 1 pouce devant l'oreille.

ATIA - 19(1)

My mother just passed away on [redacted] 2021. Her diagnosis was Leukemia, my mother has had several blood tests done over the past couple of years due to chronic pain and this low white blood cell count never showed up in a lab report. The hospital informed us that my mother had also had a stroke which took place 2 weeks earlier coincidentally the same time as her second covid vaccine. After receiving the second shot we did notice an almost lethargic like side effect along with increased confusion, lack of appetite and poor mobility. Myself and my family believe that what has happened to my mother is a result of the covid vaccine and would like to know how to go further to investigate her death. The hospital did state that the leukemia was recent and aggressive, it was Acute Myeloid Leukemia.

If you could advise us where to go from here we would appreciate it.

Regards,

[redacted] RPN

Re: Health Canada Follow-Up Clarification Request

Good afternoon Mr. [redacted]

Please allow us first to convey our deepest regrets with the recent loss of your father. We offer you our most sincere condolences during this difficult time of grief.

We are contacting you today to confirm receipt of the adverse event following immunization (AEFI) report submitted to the Canada Vigilance Program on March 2nd, 2021 regarding your father and the use of the Moderna COVID-19 Vaccine.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified the present individual case safety reports (ICSRs) where clarification is needed in order to complete the case evaluation.

We acknowledge that this is a challenging time to be requesting additional information from you. If it is easier, you may wish to request your father's physician or other health care provider to assist you, or to submit a reply on your behalf. Any information would be greatly appreciated.

Canada Vigilance Case Number	Clarification Requested
000941232	Would you kindly have any information of the following: ○ Please provide any information regarding medical confirmation of the details provided in the report. ○ Please provide any information regarding the official cause of death. If an autopsy was performed, please provide any available details. ○ Please provide any additional details of the patient's condition after the second dose of the vaccine. Specifically, any information pertaining to the patient's vital signs including oxygen saturation. ○ Please provide any information pertaining to any laboratory test results. ○ Please provide any information regarding results of COVID testing both prior to and after the second dose.

Page: 1,319 of/de 2,140

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

	○ Please provide any details regarding the treatment after the second vaccination. ○ Please provide the vaccine lot number.

May you please kindly respond to both myself, Michelle Séguin: michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Or, if you prefer, you may fax the requested information to the **Canada Vigilance Program fax at 1-866-678-6789**; please cite **case number 000941232** if replying by this means.

If you require further information within the scope of this request, please do not hesitate to contact me.

We thank you once again for your time.

Sincerely,

Michelle Séguin on behalf of:

To: Canada Vigilance COVID19 vaccine / vaccin COVID19 (HC/SC); Seguin, Michelle (HC/SC)
Subject: Re: Health Canada Follow-Up Clarification Request

Michelle,
My father's doctor at the time is Dr. [redacted] medical clinic in [redacted] He was in the long term care facility in [redacted] bc of dementia. I did not receive the report and I contacted him by phone to express my concerns about the timing of the vaccine being administered and his subsequent onset of symptoms and deterioration. Dr. [redacted] had said it was not his opinion that this was a reaction at the time of the call although he did say that it was to my sister at the care facility??? This is not meant to be an attack on Dr. [redacted] or the staff who were caring for my father. This is an attempt to ensure that this is documented as to avoid potential future reactions.

- After my fathers death I called Dr [redacted] and he informed me that the death certificate attributed his death to complications to a suspected aspiration pneumonia, at this time I asked if he had considered the reaction to the vaccination, he had not.
- no autopsy was performed
These are the events as I remember them,
- as I said in my initial email that the next day after receiving the 2nd dose his O2 saturation dropped into the 80's his heart rate elevated, respiratory rate elevated, and he developed a fever
-at the time of the 2nd dose my father had been at the facility for 5 weeks and was not thriving. He was not eating well, taking fluids and had lost almost 20lbs. (my concern is that this condition had put him in a immune compromised condition which contributed to the adverse rx, Dr. [redacted] did not agree)
- I expressed at the time that he was experiencing a reaction to the second dose of his vaccine the nurse disagreed
- He was then put on O2, given fluids by IV and an antibiotic (the antibiotic may have been the next day)
- the dx of an aspiration was due to his crackly cough, I disagreed with this assessment because the cough was not new and had been present for more than a week as a result of the thrush he developed secondary to being on an antibiotic for i believe a UTI, He was sent for a chest x-ray the next day and this came back as not being inconclusive for the dx of pneumonia
- considering by fathers personal directive the discussion was had on if treatment should be pursued or let life take its course. Dr. [redacted] felt it was worth trying and care continued for the week.
-as long as he was on O2 and getting IV fluid his O2 saturation was in the 90's and his fever was under control
-After a week of this care it was determined that he was not responding and per his personal directive all measures were discontinued
-I do not know the results of his testing after the onset of his symptoms, I do not believe he was diagnosed with Covid as we were still allowed access to him
- I was not given the vaccine lot number

This is my recollection of the events surrounding my fathers reaction to the second dose of maderna vaccine, I hope this helps,

Sincerely
[redacted]

DÉCÈS

2021[redacted]
Date du décès

[redacted]
Lieu du décès

[redacted]
Municipalité du décès

ATTENDU QU'en date du 4 novembre 2021, j'ai produit un rapport d'investigation concernant le décès de Mme[redacted]

ATTENDU QU'il y a lieu de corriger deux erreurs matérielles qui se sont produites dans les sections Circonstances du décès et Analyse du rapport;

ATTENDU QU'au premier paragraphe de la section Circonstances du décès, on doit lire que la vision de Mme[redacted] se trouble, qu'elle a des nausées et des vomissements et qu'elle peine à manger le [redacted]et non le [redacted]

ATTENDU QU'au sixième paragraphe de la section Analyse, on doit lire que Mme[redacted]a eu des effets secondaires pendant 9 jours avant de se présenter aux urgences et non pendant 5 jours;

EN CONSÉQUENCE, je produis le présent rapport amendé, lequel remplace le rapport émis le 4 novembre 2021.

IDENTIFICATION DE LA PERSONNE DÉCÉDÉE

M[me] [redacted]s'est identifiée elle-même à son arrivée à [redacted]

CIRCONSTANCES DU DÉCÈS

Le [redacted]2021, Mme [redacted] et son conjoint se rendent sans rendez-vous au centre de vaccination COVID-19 de [redacted] Ils y reçoivent leur première dose du vaccin AstraZeneca contre le coronavirus SRAS-CoV-2 (COVID-19). Dès le lendemain, Mme [redacted]ressent une grande fatigue et des maux de tête, avec des périodes où elle va mieux. Le [redacted]sa vision se trouble, elle a des nausées et vomissements et peine à manger. Elle se rend à l'urgence de [redacted]vers 18 h le [redacted] Divers tests et bilans sont effectués. Le test coronavirus express COVID-19 ressort négatif. Le bilan sanguin démontre, entre autres, une glycémie élevée et une thrombocytopénie (diminution du nombre de plaquettes sanguines qui sont alors de 11 x 10^9 thrombocytes/L alors que les valeurs de référence sont entre 137-374 x 10^9 thrombocytes/L). Des examens d'imagerie révèlent une thrombose veineuse aiguë extensive de tous les sinus veineux intracrânien majeurs avec un possible début d'hémorragie sous arachnoïdienne secondaire à une obstruction du drainage veineux. Étant donné la nature

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

de sa condition, Mme [redacted] est transférée dans un état stable à [redacted] pendant la nuit.

À l'admission à [redacted] aux petites heures du [redacted] Mme [redacted] montre des signes de dysphasie (trouble du langage), d'état confusionnel, d'hypertension et d'hyperglycémie. Des immunoglobines intraveineuses (IgIV) et un anticoagulant sont administrés, mais la condition neurologique continue de se détériorer. Une thrombectomie veineuse est alors effectuée et son état s'améliore, Mme [redacted] est consciente, alerte, orientée et stable.

Le [redacted] une légère faiblesse du bras gauche est observée.

Au matin du [redacted] son état se détériore subitement, elle doit être intubée. Des examens d'imagerie révèlent un important saignement intracrânien frontal gauche avec signe d'hypertension intracrânienne. Une craniotomie est pratiquée d'urgence pour réduire la pression intracrânienne. Des antibiotiques et deux unités de plaquettes sanguines sont donnés, car elle était sous anticoagulants.

Les [redacted] Mme [redacted] démontre des signes de dommages neurologiques irréversibles, son pronostic de récupération est très sombre. Après discussion avec la famille, des soins de confort sont donnés et les traitements de maintien des fonctions vitales sont retirés. Elle décède peu après. Le décès est constaté le [redacted] 2021 à [redacted]

EXAMEN EXTERNE, AUTOPSIE ET ANALYSES TOXICOLOGIQUES

Comme les lésions et conditions qui ont entraîné le décès de Mme [redacted] sont bien documentées dans son dossier médical de [redacted] aucune expertise additionnelle n'a été ordonnée.

ANALYSE

Le dossier médical indique que Mme [redacted] souffrait de diabète de type 2 pour lequel elle devait prendre deux médicaments par voie orale. Elle avait subi une cholécystectomie (ablation de la vésicule biliaire) et une néphrectomie droite (ablation du rein droit) dans le passé. Les examens d'imagerie de contrôle datant de 2019 ne révélaient rien d'inquiétant. Une échographie abdominale datant de la même époque notait une stéatose hépatique importante. Aucun malaise n'avait été mentionné lors du dernier suivi médical effectué par téléphone en janvier 2021. Des intolérances ou allergies alimentaires (pêche, pois, pomme, noix) et médicamenteuses (amoxicilline, héparine) sont notés au dossier médical.

Selon le ministère [redacted] la thrombocytopénie immunitaire prothrombotique induite par l'administration du vaccin (TIPIV ou TTIV) demeure un effet secondaire rare. Elle peut se produire dans les 4 à 20 jours suivants l'administration de vaccins à vecteur viral (AstraZeneca ou Covishield) contre la COVID-19. Au moment d'écrire ce rapport, seulement huit cas de TTIV avaient été recensés au [redacted] sur 563,806 doses de vaccin AstraZeneca administrées contre la COVID-19 (un neuvième cas de TTIV est lié au vaccin Covishield). Mme [redacted] est la seule personne qui malheureusement en est décédée.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Les symptômes de TTIV sont : maux de tête graves et/ou persistants, symptômes neurologiques focaux (incluant vision trouble), convulsions, difficulté à parler, essoufflement, douleur à la poitrine, enflure et rougeur d'un membre, douleur abdominale persistante, membre froid ou pâle, présence de contusions (bleus) sur la peau. Plus de cas sont rapportés concernant des femmes de moins de 55 ans, mais il est possible que les femmes soient surreprésentées selon les stratégies de vaccination utilisées par les différents pays. En date du 15 juillet 2021, au [redacted] le taux de TTIV à la suite des vaccins à vecteur viral (AstraZeneca et Covishield) contre la COVID-19 était de 1,3/100 000 doses administrées. Tous les cas déclarés sont survenus après la première dose.

Il n'y a présentement aucune indication claire sur la prédisposition de certains patients à la TTIV. Il est donc impossible de déterminer si les conditions médicales préexistantes de Mme [redacted] (diabète, organes manquants, intolérances ou allergies alimentaires et médicamenteuses) augmentaient ses risques de TTIV.

Par mesure de précaution, le [redacted] avait annoncé le [redacted] 2021 que le vaccin AstraZeneca (et le Covishield) ne serait plus administré aux personnes de moins de 55 ans, jusqu'à nouvel ordre. Or, je note que Mme [redacted] qui avait 54 ans, a quand même été vaccinée avec ce vaccin douze jours après cette date. Je me suis questionnée sur l'efficacité du moyen de communication utilisé par le [redacted] Le [redacted] m'a confirmé que l'avis du Comité sur l'immunisation avait été envoyé sous embargo par courriel à tous les responsables provinciaux et coordonnateurs en maladies infectieuses et qu'un communiqué avait été émis le [redacted] 2021. Deux jours après, les recommandations étaient intégrées au Protocole d'immunisation [redacted] qui est la norme de pratique professionnelle pour tous les vaccinateurs [redacted] Tous les abonnés à l'infolettre du Protocole d'immunisation [redacted] ont été avisés de cette mise à jour le [redacted] avril, une précision a été envoyée par la [redacted] concernant l'année de naissance pour l'administration de ce vaccin. Le [redacted] le Comité sur l'immunisation recommandait que les vaccins à vecteur viral soient désormais offerts aux personnes de 45 ans et plus, car les avantages de la vaccination dépassaient largement les risques de TTIV. Il m'apparait donc que le MSSS avait mis en place un moyen efficace de communication de l'information et que la vaccination de Mme [redacted] pendant la « pause » alors qu'elle était à la limite de l'âge permise n'est pas un élément déterminant dans son décès.

Puisque Mme [redacted] a eu des effets secondaires pendant neuf jours avant de se présenter aux urgences, je me suis demandé si les personnes qui se faisaient vacciner étaient suffisamment informées des effets secondaires des différents vaccins et du moment où il était crucial pour elles de se rendre aux urgences. On m'a informée que le 10 mars 2021, suite à l'homologation du vaccin AstraZeneca, une feuille d'information spécifique à ce vaccin avait été produite et mise à jour le 31 mars afin d'ajouter des précisions sur le risque de thrombose. Le 30 mars 2021, le [redacted] a également mis en ligne et diffusé aux associations professionnelles ainsi qu'à ses partenaires un document d'information concernant la TTIV. Il semble donc que l'information était disponible et que Mme [redacted] se soit présentée aux urgences quand elle a commencé à ressentir les symptômes sévères décrits dans l'information disponible.

Un test mesurant la présence d'anticorps dirigés contre le facteur plaquettaire 4 (PF4) effectué le [redacted] 2021 a permis de confirmer que Mme [redacted] avait effectivement eu une TTIV.

À la lumière du dossier médical et de l'information reçue du [redacted] je conclus que Mme [redacted] a subi une TTIV consécutivement à l'administration du vaccin AstraZeneca qui a causé une hémorragie intracrânienne dont elle est décédée.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

CONCLUSION

Mme [redacted] est décédée d'une hémorragie intracrânienne secondaire à une thrombocytopénie immunitaire prothrombotique induite par l'administration du vaccin (TTIV) AstraZeneca contre la COVID-19. Il s'agit d'un décès accidentel.

Je soussignée, coroner, reconnais que la date indiquée, et les lieux, les causes, les circonstances décrits ci-dessus ont été établis au meilleur de ma connaissance, et ce, à la suite de mon investigation, en foi de quoi j'ai signé, à [redacted] ce [redacted] 2021.

Subject: RE: Suivi par Santé Canada - Vaccin COVID-19 Astra Zeneca
Date: 2021-12-01 11:20:58 AM

Chère Me. [redacted] coroner,

Merci pour la déclaration d'un effet secondaire suivant l'immunisation (ESSI). Par conséquent de suivi d'évaluation par Santé Canada, le Programme de Canada Vigilance (PVC) a identifié cette déclaration pour un suivi.

L'information que vous avez fournie dans votre déclaration a été enregistrée dans la base de données du Programme Canada Vigilance sous le numéro de déclaration d'effet indésirable (DEI) 000977087.

Informations supplémentaires sur les EI après la vaccination par le vaccin COVID-19
Pour votre information, Santé Canada (SC) et l'Agence de la santé publique du Canada (ASPC) se partagent la surveillance de la sécurité des vaccins au Canada. Pour en savoir plus, veuillez consulter la page Web Déclaration des effets secondaires suivant l'immunisation (ESSI) au Canada (https://www.canada.ca/fr/sante-publique/services/immunisation/declaration-manifestations-cliniques-inhabituelles-suite-immunisation/formulaire.html).

SC et l'ASPC collaborent étroitement pour surveiller les rapports d'événements indésirables suivant l'immunisation avec les vaccins COVID-19 au Canada par le biais du PVC et du Système canadien de surveillance des effets secondaires suivant l'immunisation (SCSESSI). Les ESSI sont surveillés de façon régulière. Le gouvernement du Canada publie chaque semaine des informations sur les ESSI avec les vaccins COVID-19 (https://sante-infobase.canada.ca/covid-19/securite-vaccins/).

Canada Vigilance No	**Clarification**
000977087 (Date de réception [Santé Canada]): 24/11/2021 Vaccin COVID-19 Astra Zeneca	Veuillez SVP donnez toute information supplémentaire concernant: Comme l' Agence de la santé publique du Canada examine également ce cas et étant donné qu'en raison de la loi sur la protection des renseignements personnels, nous ne sommes pas en mesure de partager les résultats de votre enquête (incluant l'information liée à l'identité du patient ou du déclarant), pouvons-nous vous demander de **svp transmettre ce rapport à votre autorité sanitaire locale** [redacted] afin que l'ASPC complète son évaluation de causalité. (L'autorité locale de santé publique, à son tour fera rapport par l'intermédiaire des autorités fédérales, provinciales ou territoriales chargées de l'immunisation. Les ESSI sont finalement transmises à l'ASPC).

Votre action dans les meilleurs délais serait grandement apprécié pour l'évaluation de ce cas.

Si vous avez besoins de plus d'informations, n'hésitez pas à me contacter.

FORMULAIRE DE DÉCLARATION DES EFFETS SECONDAIRES

La déclaration des effets secondaires (aussi appelés « effets indésirables ») de produits de santé commercialisés au Canada peut contribuer à l'identification d'effets secondaires graves ou rares, ce qui peut entraîner la modification de l'information sur l'innocuité du produit.

Les instructions sur la façon de compléter et de soumettre le présent formulaire ainsi que l'information concernant la confidentialité se trouvent à la page 2. Compléter tous les items obligatoires, indiqués par un *, et fournir autant d'information que possible pour les autres items.

Veuillez envoyer le formulaire rempli par télécopieur au 1-866-678-6789. Pour de plus amples renseignements, composez le 1-866-234-2345.

PROTÉGÉ « B » LORSQU'IL EST REMPLI

Subject: Re: Suivi par Santé Canada - Vaccin COVID-19 Spikevax (Moderna)

Oui , il s'agit de la même personne. Je l ai accompagné lorsqu'il l a déclaré. Je n étais pas certaine que sa déclaration ait été envoyé.

N'hésitez pas si vous avez d autres questions

[redacted]

Le ven. 13 janv. 2023 à 14:23, Seguin, Michelle (HC/SC) <michelle.seguin@hc-sc.gc.ca> a écrit :

Chère Mme. [redacted]

Merci pour la déclaration d'un effet secondaire suivant l'immunisation (ESSI). Par conséquent de suivi d'évaluation par Santé Canada, le Programme de Canada Vigilance (PVC) a identifié cette déclaration pour un suivi.

L'information que vous avez fournie dans votre déclaration a été enregistrée dans la base de données du Programme Canada Vigilance sous le numéro de déclaration d'effet indésirable (DEI) 000980575.

Informations supplémentaires sur les EI après la vaccination par le vaccin COVID-19

Pour votre information, Santé Canada (SC) et l'Agence de la santé publique du Canada (ASPC) se partagent la surveillance de la sécurité des vaccins au Canada. Pour en savoir plus, veuillez consulter la page Web Déclaration des effets secondaires suivant l'immunisation (ESSI) au Canada

SC et l'ASPC collaborent étroitement pour surveiller les rapports d'événements indésirables suivant l'immunisation avec les vaccins COVID-19 au Canada par le biais du PVC et du Système canadien de surveillance des effets secondaires suivant l'immunisation (SCSESSI). Les ESSI sont surveillés de façon régulière. Le gouvernement du Canada publie chaque semaine des informations sur les ESSI avec les vaccins COVID-19.

Pour nous aider dans nos activités de surveillance, veuillez nous envoyer les informations de suivi ci-dessous (si disponibles) :

Canada Vigilance No	Clarification
000980575 Date de réception [Santé Canada]: 15 décembre 2021 Vaccin COVID-19 Spikevax (Moderna)	Veuillez SVP donnez toute information supplémentaire concernant: Est-ce que c'est possible que vous avez aussi transmis une déclaration ***initial*** le ***22 juillet 2021***? L'écriture nous semble identique mais dans la section B « renseignements sur le déclarant », l'information du patient (JYB) est fourni.

Votre action dans les meilleurs délais serait grandement apprécié pour l'évaluation de ce cas.

Si vous avez besoins de plus d'informations, n'hésitez pas à me contacter.

Merci de votre collaboration,

Michelle Séguin

ATIA - 19(1)

Canada Vigilance AER#:	000981762 (0)	Page#14

The patient presented to [redacted] Hospital, [redacted] on 2021[redacted] with autoimmune hemolytic anemia 6 days post the third dose of COVID-19 vaccine; side effect previously occurred on prior dose and was treated successfully. This time, the patient progressed to severe symptoms and was diagnosed clinically with stroke. Patient died shortly thereafter. An autopsy was performed at [redacted] Hospital (under standing contract for [redacted] to cover LH adult autopsies), and confirmed massive jaundice and findings consistent with multisystem organ failure. No specific acute brain event was evident to sufficiently explain death. Death is preliminarily attributed to complications of the autoimmune hemolytic anemia, itself likely a side effect of the vaccine.

Most responsible physician believed to be Mc[redacted] CPSO# [redacted] Spoke with Dr. [redacted] briefly and he is aware the event is being reported.

Dhpr log details:
Safety Report ID: CA-DHPR-20211224115124_222643
Type of Report: Initial
HC Ref. No:

EXTERNAL

Re: Health Canada Follow-Up Clarification Request

Good afternoon Dr. [redacted]

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

We are contacting you today to thank you and to confirm receipt of the adverse event following immunization (AEFI) report initially submitted to the Canada Vigilance Program on **December 24th, 2021** regarding suspect product: **COMIRNATY (Pfizer-BioNTech) COVID-19 VACCINE**.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified the present individual case safety reports (ICSRs) where clarification is needed in order to complete the case evaluation.

Canada Vigilance Case Number	**Clarification Requested**
000981762	To further assess this report it would be helpful to have the following information: • Confirmation of date and vaccine for 2 prior COVID vaccine doses • Confirmation of autoimmune hemolytic anemia following prior dose of COVID vaccine (medical confirmation, date of onset following vaccination, laboratory confirmation, clinical status etc.), treatment and evidence of full recuperation • Patient past medical history (over and above what was provided, if applicable: Idiopathic warm autoimmune hemolytic anemia, likely idiopathic, s/p prednisone taper with good response, in remission Diffuse large B-cell lymphoma, remote, s/p chemotherapy, deemed cured) • Confirmation of medications, indications and duration of medications if available (reported concomitants were: amlodipine 5 mg daily, ciclesonide 50 mcg nasal spray daily, duloxetine 90 mg daily, rosuvastatin 20 daily, sulfamethoxazole-trimethoprim (800-160 mg 3x per week), calcium carbonate 500 mg daily, vitamin D3 2000 U daily, ferrous gluconate 300 mg 3x/week, folic acid 5 mg daily, salbutamol inhaler as needed)

May you please kindly respond to both myself, Michelle Séguin: michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Or, if you prefer, you may fax the requested information to the **Canada Vigilance Program fax at 1-866-678-6789;** please cite case number 000981762.

CONSULTATION REPORT

Patient: [redacted]
MRN: [redacted] DOB: [redacted] 1948, Sex: M
HCN: [redacted]
Acct #: [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted]

IDENTIFYING INFORMATION:
[redacted] is a 72-year-old gentleman whom I saw in person today in the [redacted] 2021. He was referred to Hematology by Dr. [redacted] his family doctor, for a new onset of macrocytic anemia, query MDS. [redacted] is actually Dr [redacted] as he is a family doctor and has been for many years.

PAST MEDICAL HISTORY:
1. Diffuse large B-cell lymphoma in 2003 - I do not have the formal pathology but some notes in our metastatic suggest that it may have been a T-cell rich diffuse large B-cell lymphoma. He was treated with R-CHOP at that time, actually on a clinical trial in 2003 at [redacted] It looks like he went into complete response and has been in remission ever since.
2. Allergic rhinitis.
3. Asthma.
4. Eczema.
5. Hypertension.
6. Left bundle branch block.
7. Carotid stenosis.
8. BPH.
9. Osteopenia.
10. Left medial meniscal tear.
11. Patellofemoral syndrome, left knee.
12. Cervical spondylosis
13. Degenerative disc disease.
14. Low testosterone.
15. Previous cystitis.
16. Remote rib fractures.
17. Tonsillectomy.
18. Cataract.

MEDICATION(S):
1. Amlodipine 5 mg p.o. daily.

2. Calcium 500 mg p.o. daily.
3. Duloxetine 90 mg p.o. at bedtime.
4. Crestor 20 mg p.o. daily.
5. Ventolin 2 puffs inhaled p.r.n.
6. Vitamin D 1000 units p.o. daily.

ALLERGIES:
There is a previously documented allergy to PERINDOPRIL.

***** [redacted] Reported by: [redacted]
***** Unique [redacted]

SOCIAL HISTORY:
Dr. [redacted] lives with his family in [redacted] He drinks about two alcoholic beverages per day. He is a nonsmoker. As mentioned, he is a family physician and does not have private drug coverage.

HISTORY OF PRESENT ILLNESS:
Essentially, Dr. [redacted] describes having shortness of breath on exertion as well as fatigue over the past month. He says this came about relatively acutely and prior to that he has been overall feeling well. He says at rest he is doing fine. He denies any symptoms of jaundice, scleral icterus, dark urine or pale stools. He denies any constitutional symptoms. No fevers, chills, night sweats or weight loss. He has no new lymphadenopathy anywhere on the body. He denies any chest pain.

PHYSICAL EXAMINATION:
On examination today, Dr. [redacted] looks quite well. His weight today is 73 kilos. Temperature is 37.2, heart rate 90, blood pressure 155/84, O2 sat 97% on room air. Cardiac exam shows a slight systolic murmur and normal S1, S2. Respiratory exam shows good air entry bilaterally with no adventitious sounds. Abdominal exam shows a soft, nontender abdomen with no palpable organomegaly. There is no palpable lymphadenopathy in the head and neck, axillary or inguinal areas. Dr. [redacted] looks pale to the examination, but not overtly jaundiced and there is no overt scleral icterus.

INVESTIGATION(S):
Blood work from the outside lab prior to his assessment showed a hemoglobin of 88 with an elevated MCV at 109 and the referral was made for a query MDS. Previous hemoglobins from a couple of years back were completely normal in the 130s.

Looking at his blood work from today, his hemoglobin is a bit improved at 101. MCV still elevated at 107.5. White count is normal at 4, platelets normal 284, neutrophils normal at 3.3. Retic count is elevated today at 191. Ferritin is normal at 115. B12 is 192, creatinine 112 with a creatinine clearance of 44. His calcium is 2.2, total bilirubin slightly elevated at 24 and LDH is elevated at 393. Based on the initial CBC which showed elevated reticulocytes as opposed

to low reticulocyte, I did ask for further testing to rule out hemolysis. I added on a haptoglobin, which at the moment is still pending as well as a direct antiglobulin test.

ASSESSMENT AND PLAN:
Dr. [redacted] is a 72-year-old gentleman with macrocytic anemia in the context of a previous lymphoma over 15 years ago, treated with chemotherapy. He has been in remission ever since. The question I was asked about a new macrocytic anemia and whether it could be related to MDS.

I discussed things with Dr. [redacted] today and showed him his blood work. Overall, based on the clinical history, MDS would be a reasonable suspicion, however, the fact that the reticulocyte count is elevated, it does not correlate with that. I do wonder, in fact, if there is actually a hemolysis that is going on here given that there is an elevated reticulocyte count, there is an elevated LDH and a slightly elevated total bilirubin. Certainly, the confirmatory test would be the

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

haptoglobin and the direct antiglobulin test, which are still pending. Overall, I think at this point the most prudent thing is for us to wait for the results of these tests and then decide how to proceed from there. I described that if this was hemolysis, the most common cause is something called warm autoimmune hemolytic anemia. I described that in most cases this is idiopathic, but can sometimes be brought on by other conditions like lymphomas or other malignancies. The initial treatment for this is usually with prednisone as well as nutritional supplements.

If this is indeed MDS, I would say that it is most likely to be a low risk for MDS. The reason I say this is because the other counts, the white blood cell count and platelet count are completely normal. Dr. [redacted] seems to have been spending a lot of time thinking about whether this was MDS and did ask about other things like treatments including things like stem cell transplant. I did describe that whereas yes these are potential treatments for MDS, at this point there is really no confirmation at all that, that is what he has and it is probably safest to approach things one at a time. He understood this and was happy to wait for further investigations. At this point, I will plan to call Dr. [redacted] later on this week once they have confirmatory investigations. I may have some result even later this evening and can touch base with him at that point. If this is hemolytic anemia, I will call him and likely prescribe him a course of prednisone as well as other supportive medications. If the hemolytic anemia investigations are negative, then we will have another discussion about proceeding forward with a bone marrow biopsy, probably in short fashion in the next week or two.

Thank you for allowing me to participate in the care of Dr. [redacted] His questions were all answered to his satisfaction and I will plan to

ONCOLOGY NOTE

Patient: [redacted]
MRN: [redacted] DOB: [redacted]/1948, Sex: M
HCN: [redacted]
Acct #: [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted], 2021
Reported By: [redacted] M.D.

DATE OF CLINIC:
[redacted] 2021.

DIAGNOSIS(ES):
Warm autoimmune hemolytic anemia - likely idiopathic with no known secondary cause. Presented with hemoglobin in the 80s to 100. To start prednisone.

INTERVAL HISTORY:
[redacted] is a 72-year-old gentleman with whom I spoke to over the phone today, [redacted] 2021. I last saw him in-person earlier this week as a first consultation for anemia. At that time, he was referred by Dr. [redacted] for consideration of MDS due to his previous history of lymphoma, treated with chemotherapy. Today, I spoke to [redacted] over the phone due to the risk of COVID-19. We discussed the risks and benefits of telephone assessment including the lack of physical examination, as well as the need for him to seek in-person medical attention if necessary. [redacted] understood this, was able to give consent today.

Since I last spoke to [redacted] overall he has continued to be well. It seems like he did still have quite a bit of anxiety with regards to the potential of this being a diagnosis of MDS, which is a hematologic malignancy and does significantly affect his overall prognosis and duration of life span. Overall, he says his energy levels are stable. He has not noticed any signs or symptoms of bleeding and denies any chest pain or shortness of breath.

PHYSICAL EXAMINATION:
Deferred as this is a telephone assessment.

INVESTIGATION(S):
I have results of all the blood work that was previously pending from his last visit. Essentially, at that time, his hemoglobin was low at 101 and his LDH was elevated at 393. I can now confirm that his

Provider [redacted] **Status: Final**

haptoglobin was undetectable and a direct antiglobulin test or the Coombs test was positive for IgG coding the red blood cells. This confirms a diagnosis of warm autoimmune hemolytic anemia.

ASSESSMENT AND PLAN:
Dr. [redacted] is a 72-year-old gentleman with a new diagnosis of warm autoimmune hemolytic anemia. At this point, there is no clear secondary source and is suspected to be idiopathic.

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

[redacted] and I had a long discussion about the diagnosis, as well as the treatment going forward. I described that warm autoimmune hemolytic anemia is an immune mediated phenomenon, which leads to immune mediated destruction of the red blood cells. The treatment of this in the acute setting is with a high dose of prednisone to control the immune system and control the hemolysis. As well, I have prescribed the patient a variety of medications to help with managing the potential side effects of prednisone as well as medications to active hematinics to help with red blood cell production. Essentially for [redacted] this will consist of a starting dose of prednisone 75 mg daily for two weeks, which is 1 mg/kg with his weight around 73 kilograms. With regards to supportive medications, I have sent prescriptions to his pharmacy for Tecta 40 mg daily for stomach prevention, increased his calcium and vitamin D to 1000 mg of calcium daily and vitamin D 2000 units daily, as well as sent a prescription to his pharmacy for Septra-DS 1 tablet Monday, Wednesday, Friday for PJP prophylaxis. I described the other side effects of steroids could include increased appetite, weight gain, fluid retention, anxiety, agitation, and insomnia. [redacted] being a physician knew most of this already. Other prescription I gave him today were for maintaining his red blood cell building blocks such as a prescription for vitamin B12, folic acid, as well as ferrous gluconate.

Overall, [redacted] was quite happy to hear that this did turn out to be hemolytic anemia as opposed to MDS. I did describe to him that often hemolytic anemia like this does respond to a prolonged taper of steroids, but there is always a chance similar to another hematologic condition like ITP that it may relapse in the future.

My plan for [redacted] is to follow up with him in two weeks with some repeat blood work. He knows if he does notice any significant drop in energy level or any significant side effects to either call my office or go directly to the emergency department if it is felt to be severe.

Acct # [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted] M.D.

DATE OF CLINIC:
[redacted] 2021.

DIAGNOSIS(ES):
Warm autoimmune hemolytic anemia - likely idiopathic with no known secondary cause. Presented with hemoglobin in the 80s to 100s. Started prednisone 75 mg daily about 7 to 10 days ago. Previous history of a diffuse large B-cell lymphoma in 2003 treated with chemotherapy in remission ever since.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman with whom I spoke to over the phone today, [redacted] 2021. I last spoke to him a couple of weeks ago and once again we spoke over the phone due to the risks of COVID in [redacted] and once again he gave consent.

[redacted] does describe a bit of a delay in obtaining the prednisone to start for his anemia. The reason is because he was actually trying to get his shingles vaccination before then and he has done. Apart from that, [redacted] does note that more recently since starting prednisone, he has noticed sweating in the nighttime. He says that these do occasionally require him to wake up in the middle of the night and to switch his sheets or specifically to put a towel over his sheets to control the sweating. He says that this may have been present a little bit before starting prednisone, but it is very noticeable now. Apart from that, he denies any fevers, chills, weight loss or lymphadenopathy. His sleep is overall sustained, but still a little bit disturbed by prednisone. Energy level seems steady and he denies any chest pain or shortness of breath. He has not had any recent signs or symptoms of bleeding.

PHYSICAL EXAMINATION;
Deferred as this is a telephone assessment.

Progress Report - [redacted] 2021 14:50 [redacted]
Provider [redacted] **Status: Amended (A)**

[redacted]s most recent lab work shows no improvement in his hemoglobin as of yet. His hemoglobin is still steady at 98. Last time I saw him, it was 101. White count 5.8, platelet count 334, both normal. Retic count is elevated at 232, as it would be expected and MCV is still high at 110. LDH is 272 still elevated, however, now total bilirubin and haptoglobin have normalized. Creatinine is 97.

ASSESSMENT AND PLAN:
[redacted] is a 72-year-old gentleman with warm autoimmune hemolytic

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

anemia on prednisone 75 mg daily, which is 1 mg/kg. He has had only about 8 or 9 days of prednisone so far and his hemoglobin still has not yet improved. I described to him that I want to see at least some improvement in his hemoglobin before starting to taper prednisone, so I did give him another prescription for 75 mg daily to go forward. I will plan to see him again in 2 weeks to recheck his blood work and hopefully by that time he has had some response. He does have some good signs in that his haptoglobin and bilirubin are normal and hopefully in 2 weeks the hemoglobin will have improved as well. As well, he will continue on with his other prophylactic medications as we had started previously.

With regards to the night sweats again this does seem to be temporally related to the steroids. Given, however, there is a previous history of lymphoma and the fact that now there is a new warm autoimmune hemolytic anemia and rarely this is secondary to lymphoproliferative disorder. I will organize CT scans of the neck, chest, abdomen and pelvis to rule out any malignancy here.

Thank you for allowing me to participate in Dr. [redacted] care. I will plan to follow up with him in a couple of weeks.

ONCOLOGY NOTE

Patient: [redacted]
MRN: [redacted] DOB: [redacted] /1948, Sex: M
HCN: [redacted]
Acct #: [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted], M.D.

DATE OF CLINIC:
[redacted] 2021.

DIAGNOSIS(ES):
Warm autoimmune hemolytic anemia - likely idiopathic. Presented with hemoglobin in 80s to 100. Started prednisone 75 mg daily and has been on it for about three to four weeks. Hemoglobin is starting to respond. Plan for long prednisone taper. Previous history of diffuse large B-cell lymphoma in 2003 treated with chemotherapy, in remission since.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman with whom I spoke to over the phone today, [redacted] 2021. As previous, we spoke as a phone appointment due to the risk of COVID in [redacted] and once again he gave consent.

Overall, [redacted] continues to do reasonably well on the high dose prednisone. He says that he feels somewhat of a hypomania that actually seems like it gives him more energy, but otherwise seems to have tolerated the prednisone reasonably well. He has not had a significant weight gain or sleep disruption as yet. He denies any fevers, chills, night sweats or weight loss recently; however, he did complain about some night sweats previously. We do have a CAT scan that was ordered that is still pending about that. As I mentioned in a previous note, Dr. [redacted] has had his first dose of the COVID vaccine previously and is due for his next dose next month. He has not noticed any jaundice, dark urine or pale stools.

PHYSICAL EXAMINATION:
Deferred as this is a telephone assessment.

INVESTIGATIONS:
His most recent blood work shows an improvement in his hemoglobin up to 118, previously was 98. White count 8.4, platelet count 252, MCV 103, retic count 91. Total bilirubin 12, LDH 250. Haptoglobin 1.57.

[redacted] DOB: [redacted] 1948 (73y) Male HCN [redacted]

Progress Report - [redacted] 2021 13:30 [redacted]
Provider [redacted] **Status: Final**

Essentially, this suggests that the hemolysis is minimal at this point, LDH is still elevated, but all the other hemolytic markers are normal. He still has some degree of MCV increase with normal retic count.

ASSESSMENT AND PLAN:
[redacted]Hoy is a 72-year-old gentleman with a warm autoimmune hemolytic anemia. He has had a good jump in his hemoglobin and now I think it is safe for us to decrease his prednisone and start the taper. I will be doing a taper of 50 mg for one week, 40 mg for one week, 30 mg for one

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

week, 20 mg for one week, 15 mg for one week, 10 mg for one week, 5 mg for one week, and then he can stop. I will continue to ask him to do his blood work every two weeks for the time being. As well, he will continue on with all his prophylactic medications.

There is still a CT scan that is pending, which is due to happen in the next week and I will follow up on that. I will plan to speak to Dr. [redacted] again over the phone in about four weeks to review the next couple of rounds of his blood work.

HCN: [redacted]
Acct #: [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted] M.D.

DATE OF CLINIC:
[redacted] 2021

DIAGNOSIS(ES):
Warm autoimmune hemolytic anemia - likely idiopathic. Presented with hemoglobin in 80s to 100. Started prednisone 75 mg daily, and now on taper with good response. Previous history of diffuse large B-cell lymphoma in 2002 through 2003, treated with chemotherapy, in remission.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman with whom I spoke with today, [redacted] 2021. As previous, we spoke as a phone assessment due to the risk of COVID in Ontario and once again he gave consent.

Overall, [redacted] continues to do reasonably well. He has actually had been a bit easier in the last few weeks as his prednisone continues to taper down as he has not had as much trouble with the sweats that he was struggling with earlier on. In general, he just feels better. He does confide in me the significant stress of his work as he has had to work very hard, especially recently during his illness.

Physical examination was deferred as this is a telephone assessment.

INVESTIGATION(S):
[redacted]'s most recent blood work shows a hemoglobin of 120, white count 8.6, platelet count 299. LDH is still mildly elevated at 300, but bilirubin is 9 and haptoglobin is 1.45 completely normal. Retic was only mildly elevated at 108.

ASSESSMENT AND PLAN:
Dr. [redacted] is a 72-year-old gentleman with warm autoimmune hemolytic anemia. He has had a good response to prednisone and his hemolysis is minimal at this point. He is currently on 20 mg of prednisone and will continue tapering down. He should be completed his taper in about 4

User Id: [redacted] *Organization:* [redacted]

weeks' time. I will plan to follow up with his blood work a couple of weeks after he has completed the taper just to see where things have leveled off.

I should mention that [redacted] did recently have a CT scan of the chest, abdomen and pelvis to look for any recurrence of lymphoma or other explanation for his hemolytic anemia. Reassuringly, the CT scan only identifies the small node in the axilla that was known from previous that has been unchanged in size, ever since 2003. There is no other

***** [redacted] Reported by: [redacted]
***** Unique [redacted]

suggestion of malignancy. [redacted] was very happy to hear that. I will plan to follow up with him over the phone after he has completed his prednisone.

Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted] M.D.

DATE OF CLINIC:
[redacted] 2021.

FAMILY PHYSICIAN:
Dr. [redacted]

DIAGNOSIS(ES):
Warm autoimmune hemolytic anemia, likely idiopathic. Presented with hemoglobin in 80s to 100s. Started prednisone 1 mg/kg and has now tapered off. Initially a good response, but hemoglobin has dropped again after completing therapy. Previous history of diffuse large B-cell lymphoma, treated remotely with chemotherapy, essentially cured.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman with whom I spoke with over the phone today, [redacted], 2021. I last reviewed him just about a month ago. I did try to get a hold of him last week to review his blood work, however, I was unable to reach him on the phone. [redacted] was away that day and did see my message that I left. Once again, we spoke over the phone due to the risks of COVID in [redacted] and once again he gave consent.

Since I last spoke to him, [redacted] does note that his energy level seems to have dropped to touch. It is not as bad as it was prior to when he first saw me, but he says he has had a perceptible change. On top of that, he still is having a lot of difficulty with his excessive workload and I think this is probably contributing as well. He completed his steroids just about a week or two ago.

Physical examination was deferred as this is a telephone assessment.

INVESTIGATION(S):
[redacted] s hemoglobin has dropped to 99, compared to the last time I saw him, which was 120. White count is 4.8, platelet count 286. His hemolytic markers have also slightly risen with LDH up to 397,

previously was 300. Haptoglobin as well is now undetectable. Essentially, Paul is having recurrent hemolysis.

ASSESSMENT AND PLAN:
Dr. [redacted] is a 72-year-old gentleman with warm autoimmune hemolytic anemia. Unfortunately, it seems as though his disease has recurred after completing his prednisone taper. I will plan to bring him into the hospital next week to follow up in person and repeat some blood work and likely it may be that we do need to restart some kind of therapy at

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

that time. It may be a long-term consideration as well to do a bone marrow to rule out any underlying MDS. Even when his hemoglobins were well controlled, he was not able to get up higher than about 120. Again, the clear etiology here still is his autoimmune hemolytic anemia. [redacted] is happy with this plan and will see me next week.

DATE OF CLINIC:
[redacted] 2021.

FAMILY PHYSICIAN:
Dr. [redacted]

DIAGNOSIS(ES):
1. Warm autoimmune hemolytic anemia, likely idiopathic. Presented with hemoglobin in 80s to 100. Started prednisone 1 mg/kg and now tapered off. Initially had good response, but hemoglobin has dropped again after completing therapy with ongoing positive hemolytic markers.
2. Previous history of diffuse large B-cell lymphoma, treated remotely with chemotherapy, essentially cured.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman whom I saw in person today in the [redacted] on [redacted] 2021. I last spoke to him on the phone a week ago. I want to bring him back into the hospital because he was having a hemoglobin drop since discontinuing prednisone. Overall, [redacted] says he does still note that his energy is lower, but not as bad as when he was first diagnosed. He particularly notes shortness of breath with exertion going up stairs and things like that. He has not noticed any dark urine or pale stools. He has not had any signs or symptoms of bleeding. He tolerated steroids reasonably well with no overt side effects, but again he was quite happy to finish them.

PHYSICAL EXAMINATION:
On examination today, Dr. [redacted] looks reasonably well. His weight is 72.2 kg, temperature 36.8, heart rate 76, blood pressure 147/80, O2 sat 99% on room air. Cardiac and respiratory exams are within normal limits.

INVESTIGATION(S):
His blood work today shows a white count 4.7, hemoglobin 109 and platelet count 316. Hemoglobin actually has gone up 10 points since his

outside lab work when his hemoglobin was 99. He still has elevated retic count of 158, as well as elevated LDH of 384 and undetectable haptoglobin at less than 0.1 in keeping with ongoing active hemolysis. His bilirubin was not elevated. Creatinine is 105. Ferritin 86 and B12 at 269.

His DAT continues to be positive at 3+.

ASSESSMENT AND PLAN:

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

[redacted] is a 72-year-old gentleman with warm autoimmune hemolytic anemia. He did complete steroids and was on treatment for just over three months before tapering off. Unfortunately, since tapering off, [redacted]'s hemoglobin has gone down again. In the last week, he has rebounded a little bit, but there is clear presence of ongoing hemolysis.

I had a long discussion with him today about what to do going forward. Essentially, he is still having active hemolysis. The prednisone seemed to have worked for the time being, but it may have been that we tapered off a little bit too quickly. Sometimes it is even recommended that people are on a long taper of six months or so. Again, sometimes I try to avoid this just to spare the patient's side effects of steroids, but it may be that something longer like this is needed. As well, there is also a potential need for using a secondary medication as well as steroids as a bit of a steroid-sparing agent, something like azathioprine, cyclophosphamide or cyclosporine. I did print off a research paper about treatment options for patients with hemolytic anemia and did give it to [redacted] The other option here is for something like rituximab, which has been well studied in hemolytic anemia. Unfortunately, it is not covered. I will inquire about it with our drug access facilitator to see if there is any compassionate access or at least what the cost would be if he were to pay out of pocket. Unfortunately, Dr. [redacted] does not have a private medical insurance.

Again, at the moment with [redacted]s recent rebound in hemoglobin, I think the most reasonable thing is to just watch and wait and observe him for the time being. I want to repeat his blood work in a couple of weeks. If the blood work continues to be stable or continues to improve, it may be that we can withhold therapy for a little while. If the hemoglobin does drop down again, specifically if it goes below 100 or 90, then I do think we need to reintervene with immunosuppressive therapy. [redacted] understands this.

Thank you for allowing me to participate in the care of Dr. [redacted] I will plan to follow up with him in a couple of weeks' time.

[redacted]

ONCOLOGY NOTE

Patient: [redacted]
MRN: [redacted] DOB: [redacted] /1948, Sex: M
HCN: [redacted]
Acct #: [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted] M.D.

DATE OF CLINIC:
[redacted] 2021

DIAGNOSIS(ES):
1. Warm autoimmune hemolytic anemia, likely idiopathic. Presented with hemoglobin in the 80s to 100. Started prednisone 1 mg/kg and tapered off over a course of about 3 months. He had good response with hemoglobin slightly dropping after treatment. Ongoing mild hemolysis, on surveillance.
2. Previous history of diffuse large B-cell lymphoma, treated remotely with chemotherapy, essentially cured.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman with whom I spoke with over the phone today on [redacted] 2021. I last reviewed him a couple of weeks ago. At that time, I brought him in person to recheck his blood work. [redacted] has had blood work again in the last couple of days and once again we spoke on the phone due to risk of COVID in [redacted] and as previously he was able to give consent.

Overall, Dr. [redacted] says that he has been feeling reasonably similar to how he had been before. His energy level seems to be stable. He has not noticed any recent signs or symptoms of bleeding. There is no jaundice, dark urine or pale stools. His energy level has been stable since previous. Last time we spoke, we did look into other options as a second-line agent for warm autoimmune hemolytic anemia such as rituximab.

Physical examination was deferred as this is a telephone assessment.

INVESTIGATION(S):
Most recent hemoglobin is actually slightly improved from previous now up to 113. When I last saw him, it was 109, white count 3.5, platelet count of 260. MCV is 107, still elevated and retic count is borderline

elevated as well as 109. Haptoglobin is actually normal now at 0.3, although LDH is still elevated at 293. Total bilirubin is also normal at 9. Creatinine 88. Essentially, his LDH and haptoglobin have been improved from previous, although he continues to have some ongoing hemolysis. The extent of it has actually decreased from previous.

ASSESSMENT AND PLAN:
[redacted] is a 72-year-old gentleman with warm autoimmune hemolytic anemia. He has completely tapered off prednisone and although he

***** HOY,DR [redacted] Reported by: [redacted]
***** Unique # [redacted]

continues to have some hemolysis. His hemoglobin has been reasonably stable in the last little while. Unfortunately, hemoglobin has not completely normalized. He still has significant macrocytosis even with only a mild reticulocytosis at this point, so there may still be an underlying diagnosis of myelodysplastic syndrome II. Right now, although [redacted] is relatively asymptomatic and the hemoglobins are reasonable. At this point, I think we should continue on with just observation. I plan for possibly blood work in a month and I will plan to call him in followup after that. If things continue to be stable, then we can continue on with followup bit more spread out. If unfortunately the hemoglobin does drop and he has had further relapse of his hemolysis, then we will need to think about second-line options for repeating steroid. [redacted] understands this and is happy with the plan.

ONCOLOGY NOTE

Patient: [redacted]
MRN: [redacted] DOB: [redacted] 1948, Sex: M
HCN: [redacted]
Acct #: [redacted]
Site: [redacted] Location: [redacted]
Date of Service: [redacted] 2021
Reported By: [redacted] M.D.

DATE OF CLINIC:
[redacted] 2021

DIAGNOSIS(ES):
1. Warm autoimmune hemolytic anemia, likely idiopathic. Treated with long-term prednisone taper over 3 months with a good response to treatment. Currently, no evidence of active hemolysis.
2. Previous history of diffuse large B-cell lymphoma treated remotely with chemotherapy, essentially cured.

INTERVAL HISTORY:
Dr. [redacted] is a 72-year-old gentleman with whom I spoke with over the phone today, [redacted] 2021. Once again, we spoke over the phone due to the risks of COVID in [redacted] and as previously gave consent. Since we last spoke, [redacted] has been reasonably stable. Unfortunately, just around the time we have last spoke [redacted] has got a diagnosis of shingles. It was quite painful and did cause him a bit of trouble at that time, but fortunately, things seemed to have resolved from that point. His energy levels are overall stable and he still feels tired, but again his practice is very exhausting for him. He has not noticed any chest pain or shortness of breath and no signs or symptoms of bleeding. There is no jaundice, dark urine or pale stools.

Physical examination was deferred again as this is a telephone assessment.

INVESTIGATION(S):
His most recent blood work actually shows a significant improvement in his hemoglobin up from 113 to 130, white count of 4.5, platelets 216. Neutrophils 3.16. As well, his hemolytic markers have now normalized with bilirubin 6, LDH 214 and haptoglobin 1.25.

ASSESSMENT AND PLAN:
Dr. [redacted] is a 72-year-old gentleman with warm autoimmune hemolytic

anemia. He is currently on observation and his hemoglobin and hemolytic parameters have significantly improved in the last month with no specific treatment. Again, we do see fluctuations like this sometimes or even delayed responses to prednisone, sometimes it is not very common. Again, previously his shingles or active viral infection may have contributed to further hemolysis previously, and now that has resolved. He has been stabilized a bit more. I am quite happy to see this result and as we were considering second line options for his warm autoimmune hemolytic anemia if he were to relapse again. At the moment,

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

I think we can safely put this on the back burner. For the time being, I do think it is reasonable that we continue on with a monthly blood work, but for now I will just follow up with him in 3 months' time. If there are any significant abnormalities in the blood work that was done, I will contact him of course for earlier followup.

DATE OF CLINIC:
[redacted] 2021

FAMILY PHYSICIAN:
Dr. [redacted]

DIAGNOSIS(ES):
1. Warm autoimmune hemolytic anemia, likely idiopathic. Treated with long-term prednisone taper over 3 months with a good response to treatment. Currently, no evidence of active hemolysis on observation.
2. Previous history of diffuse large B-cell lymphoma, treated remotely with chemotherapy, essentially cured.

INTERVAL HISTORY:
Dr. [redacted] is a 73-year-old gentleman with whom I spoke with over the phone today, November 29, 2021. I last reviewed him 2 months ago. Once again, we spoke over the phone due to the risks of COVID in [redacted] and as previous, Paul was able to give consent. I did confirm his identity prior to the conversation.

Since we last spoke, overall, [redacted] has been feeling okay but right now is struggling with a lot of personal stress in his family. This is likely contributing to his energy levels. Apart from that, he has actually felt quite well with no chest pain or shortness of breath. He says that he gets occasionally itchy and occasionally feels excess sweating during the daytime, but apart from that, really has no concerns. There are no symptoms of jaundice and no signs or symptoms of bleeding from any source. He has not had any infectious symptoms recently.

PHYSICAL EXAMINATION:
Deferred as this is a telephone assessment.

INVESTIGATION(S):

Privacy Disclaimer:

[redacted] **DOB:** [redacted] 1948 (73y) Male **HCN:** [redacted]

Progress Report - [redacted] 2021 17:15 [redacted]
Provider: [redacted] **Status: Final**

[redacted] s most recent blood work shows a white count 4.7, hemoglobin 141, platelet count 155, neutrophils 3.7, bilirubin 6, LDH 222, haptoglobin 1.47. Essentially, it is all completely normal with no evidence of hemolysis.

ASSESSMENT AND PLAN:
Dr. [redacted] is a 73-year-old gentleman with a history of warm autoimmune hemolytic anemia. Right now he is in remission with his hemoglobin normal and no evidence of active hemolysis. At this point, I

***** [redacted] Reported by: [redacted]
***** Unique # [redacted]

am quite happy with how he has responded to prednisone, especially since there was a period of time when we were not sure his responses are good. I will plan to follow up with him again in about 3 to 4 months with some repeat blood work at that time. [redacted] knows that if he does have any significant drop in energy, chest pain, shortness of breath, symptoms of jaundice or other concerning symptoms that he should use that as the motivation to get blood work done as it may be that the hemoglobin is lower at that time. He understands this quite well and apart from that is happy to see me again in a few months' time.

ATIA - 19(1)
Document Released Under the Access to

[redacted]

Patient Name:	[redacted]			Accession #:	[redacted]
MRN:	[redacted]	Facility:	[redacted]	Expiration date:	[redacted]2021
DOB:	[redacted]948 (Age: 73)	Location:	[redacted]	Autopsy date:	[redacted]2021
Gender:	M	Service:		Reported:	
HCN:		Visit #:	[redacted]		
Ordering MD:	[redacted] MD				

Post Mortem Hours: 7
Authorized by: [redacted]
Relationship to Patient: Wife
Autopsy Restrictions: None

Preliminary Anatomic Diagnosis

Autoimmune hemolytic anemia as an apparent complication of COVID-19 vaccine administration

[redacted]1/5/2022

Electronically verified by:
[redacted] **MD**

Major Clinical Findings
Remote history of diffuse large B-cell lymphoma treated with chemotherapy (in remission)
March 2021: First dose of COVID-19 vaccine
April-July 2021: Warm autoimmune hemolytic anemia (AIHA) [redacted]2021), treated successfully with steroid taper
[redacted]2021: Second dose of COVID-19 vaccine
[redacted]Third dose of COVID-19 vaccine
[redacted]Presented to [redacted]with dark urine, scleral icterus, and shortness of breath
Anemia (hemoglobin 99 g/L), negative direct antiglobulin test (DAT), low reticulocyte count
SARS-CoV-2 not detected by polymerase chain reaction (PCR) assay
[redacted]Increasing agitation and decreased level of consciousness
Hemoglobin level 44 g/L, transfused with 2 units of blood
Computed tomography (CT) scan of head: right middle cerebral artery (MCA) territory ischemic stroke
Not a candidate for thrombolysis due to coagulopathy and severe metabolic derangement
[redacted]Severe hyperlactemia, multisystem organ failure
Family discussion lead to redirecting goals of care to include a "do not resuscitate" (DNR) status
The patient died shortly after transition to the DNR status

Major Pathological Findings
Marked jaundice and scleral icterus
Edematous lungs (right: 980 g, left: 830 g), no masses or consolidation grossly identified
Bilateral pleural serosanguineous effusion: right 300 mL, left 300 mL
Cardiomegaly (540 g)
Pericardial serosanguineous effusion: 30 mL
Liver (1420 g): golden brown discoloration with apparent congestion, hemorrhage and possible necrosis
Spleen (350 g): diffluent and severely congested
Brain (1420 g): No external abnormalities, full evaluation by UHN Neuropathology service pending

Clinical Pathological Correlation

[redacted]

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la [redacted] l'information par Santé [redacted]

[redacted]

Autopsy Consultation Report

This 73-year-old man was diagnosed with autoimmune hemolytic anemia (AIHA) five (5) days after receiving his third dose of the COVID-19 vaccine. He had been diagnosed with AIHA in [redacted] 2021, several weeks after his first dose of the vaccine; this prior episode resolved with a three (3) month steroid taper, and the disease was not exacerbated by his second dose of the vaccine, taken during the treatment period. He received his third vaccine dose in [redacted] 2021, and experienced a rapid decline associated with AIHA starting five days after that injection, including a massive right sided ischemic stroke and multisystem organ failure. He ultimately died on [redacted] 2021.

Preliminary autopsy findings were significant for jaundice, marked splenomegaly, and hepatomegaly with apparent congestion and possible necrosis. The heart and lungs were heavy and had associated serosanguineous effusions. The external examination of the brain was unrevealing; further assessment will be performed after adequate tissue fixation. No specific acute catastrophic event to explain death was otherwise identified.

Death is attributed to AIHA likely triggered as a complication of COVID-19 vaccine. Having recently recovered from a prior episode of AIHA was likely a predisposing factor for this patient to develop AIHA again in this context. The specific mechanism of death is favored to be acute liver failure secondary to the AIHA.

THIS IS AN INTERIM REPORT ONLY. THE DIAGNOSIS GIVEN MAY BE EXTENDED OR ALTERED IN THE FINALREPORT, WHICH WILL FOLLOW.

[redacted]

Dear [redacted]

We are contacting you with regards to suspected adverse reaction (AR) report for a 53 years old, female patient; initially submitted to the Canada Vigilance Program on January 14, 2022 and processed as a Health Canada Adverse Reaction Report # 000983841 (Reference # LRN-20220117-1495).

Based on the Health Canada assessment of the submitted information we contact you with a request for correction.

Your report indicates "IV" for the route of administration (D.9) for Pfizer BNT162b2.
Covid vaccines are administered intramuscularly. Could you clarify?
Please kindly submit your correction at your earliest convenience.

Please send your response to the Canada Vigilance Program (CVP) email at canadavigilance@hc-sc.gc.ca and copy shun.zhang@hc-sc.gc.ca, michelle.seguin@hc-sc.gc.ca and me.

Please do not hesitate to contact us if you have questions and comments.

EXTERNAL

Re: Health Canada Follow-Up Clarification Request

Good afternoon Mrs. [redacted]

We are contacting you today to thank you and to confirm receipt of the adverse event following immunization (AEFI) report initially submitted to the Canada Vigilance Program on **January 14, 2022** regarding suspect product: **"Pfizer BNT162B2" [COMIRNATY VIAL CONTAINS 6 DOSES OF 0.3 ML AFTER DILUTION] COVID-19 Vaccine**.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified the present individual case safety reports (ICSRs) where clarification is needed in order to complete the case evaluation.

***Please note that a colleague (it would be a message deriving from "Bogna Lasia-Szkaradkiewicz, bogna.lasiaszkaradkiewicz@hc-sc.gc.ca") in training reached out to you in last week. If you could please ignore that request as it was incomplete and did not specify the generic e-mail account for COVID-19 Vaccines *** **Please consider this message as the official request from our evaluators.** We apologize for any inconvenience.

Canada Vigilance Case Number	Clarification Requested
000983841	Specifically, I would like to request the following information: • Information about the COVID-19 immunization, e.g., date of vaccination. • Relevant clinical information regarding the patient's current medical history (e.g., diabetes, smoking history, hypertension, hyper-cholesterol or hyperlipidemia and history of ischemic heart diseases, cancers) and concurrent medications. • The patient's COVID-19 infection status at the time of the adverse event. • Information about any presenting symptoms related to the adverse event. • Information about medical treatment and investigation related to the adverse events (i.e., capillary leak syndrome), e.g., blood tests (e.g., complete blood count, electrolytes, renal functions, liver functions,

	albumin etc.) and radiological investigations (e.g., CT, MRI, angiogram, echocardiogram ultrasound, etc.). • The outcome of the Coroner investigation and the autopsy, if available.

May you please kindly respond to both myself, Michelle Séguin: michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Or, if you prefer, you may fax the requested information to the **Canada Vigilance Program fax at 1-866-678-6789**; please cite case number **000983841** .

If you require further information within the scope of this request, please do not hesitate to contact me.

We thank you once again for your time.

Sincerely,

Michelle Séguin

IDENTIFICATION DE LA PERSONNE DÉCÉDÉE

M.[redacted] a été identifié visuellement par un proche, sur les lieux du décès.

CIRCONSTANCES DU DÉCÈS

Le [redacted] 2021, un responsable de la coopérative d'habitation régissant l'immeuble où demeure M[redacted] se rend à son domicile. Il cogne, mais n'obtient pas de réponse. Il en informe un autre responsable. Cette personne décide de se rendre chez M.[redacted] puisqu'il ne parvient pas à le rejoindre depuis quelques jours et cela lui parait inhabituel.

Vers 20 h 5, elle cogne à son tour à la porte vigoureusement, mais en vain. Étant inquiète, elle décide de défoncer la porte. Elle entre alors dans le domicile et trouve M.[redacted] étendu sur le plancher de la cuisine, inanimé. Il contacte immédiatement le 9-1-1, alors qu'une autre personne entame des manœuvres de réanimation.

Des agents du Service de police de la[redacted] arrivent sur les lieux et poursuivent les manœuvres de réanimation jusqu'à l'arrivée des techniciens ambulanciers paramédics, quelques minutes plus tard.

À leur arrivée, les techniciens ambulanciers paramédics constatent la présence de rigidité cadavérique empêchant l'ouverture des voies respiratoires. Dans les circonstances, il est demandé au policier de cesser les manœuvres de réanimation, celles-ci étant vaines.

Le décès a été constaté à par un médecin de[redacted] à distance, selon le protocole établi, à 20 h 58.

EXAMEN EXTERNE, AUTOPSIE ET ANALYSES TOXICOLOGIQUES

Une autopsie a été faite le [redacted] 2021 à[redacted] Dans son rapport, le pathologiste a principalement décrit la présence d'une embolie pulmonaire bilatérale caractérisée par la présence d'un important caillot. La présence d'une stéatose hépatique sévère ainsi que d'athérosclérose coronarienne et aortique modérée a aussi notamment été mise en évidence. Aucune autre lésion contributive au décès n'a été observée.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Des analyses toxicologiques ont été pratiquées au [redacted]. Aucune autre substance n'a été détectée, incluant l'alcool.

Le dépistage de la COVID-19 était négatif.

ANALYSE

Sur place, les agents n'ont observé aucun indice laissant suspecter l'intervention de tiers, aucune trace de violence ou de cambriolage.

Selon un proche, M[redacted] aurait allégué ressentir certaines difficultés respiratoires pendant la semaine précédant son décès. Il lui aurait été recommandé d'aller consulter un professionnel de la santé, ce qu'il avait refusé de faire.

Les archives médicales de M.[redacted] témoignent d'ailleurs du fait qu'il consultait très rarement des professionnels de la santé. Ses archives des quinze dernières années ne m'ont pas permis de mettre en évidence quelques antécédents médicaux pertinents.

Selon ses proches, M.[redacted] était non-fumeur et ne consommait pas d'alcool. Il était toutefois obèse et des antécédents de troubles cardiovasculaires semblent être présents dans sa famille immédiate. Bien que cela constitue des facteurs prédisposant à la formation d'un caillot sanguin pouvant entrainer une embolie pulmonaire, je ne peux faire fi du fait que M.[redacted] avait reçu la seconde dose de son vaccin contre la COVID-19 le [redacted] 2021.

L'embolie pulmonaire est l'une des rares complications possibles suivant l'admission du vaccin contre la COVID-19.

En l'absence d'évidences à l'effet qu'il s'agirait d'une embolie pulmonaire spontanée, la relation temporelle entre le vaccin et l'embolie pulmonaire bilatérale m'apparait prépondérante.

M[redacted] était actif sur les réseaux sociaux et sa dernière activité semble dater du [redacted] 2021. Une facture datée de cette journée a aussi été trouvée. Par ailleurs, le [redacted] est la date de l'anniversaire d'un membre de la famille de M.[redacted]. Or, cette personne n'a pas été contactée par M[redacted] à cette occasion ce qui est inhabituel. En considérant ces informations ainsi que l'état de conservation de son corps, j'établis la date du décès de M.[redacted] au [redacted] 2021.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

CONCLUSION

M. [redacted] est décédé d'une embolie pulmonaire bilatérale, probablement secondaire à la vaccination contre la COVID-19.

Il s'agit d'un décès accidentel.

Je soussignée, coroner, reconnais que la date indiquée, et les lieux, les causes, les circonstances décrits ci-dessus ont été établis au meilleur de ma connaissance, et ce, à la suite de mon investigation, en foi de quoi j'ai signé, à [redacted], ce [redacted] 2022.

[redacted]

Me [redacted] coroner

Lieu du décès

IDENTIFICATION DE LA PERSONNE DÉCÉDÉE

M[redacted] a été identifié visuellement par un membre de sa famille sur les lieux du décès.

CIRCONSTANCES DU DÉCÈS

Le [redacted] 2022 vers 13 h 30, M[redacted] reçoit un troisième vaccin contre la COVID-19. En après-midi et en soirée, il se porte bien et ne formule aucune plainte.

Le [redacted] 2022 vers 5 h, un membre de sa famille l'accompagne afin d'aller à la salle de bain. M[redacted] déclare alors avoir de la difficulté à respirer. Alors qu'il est aux toilettes, M.[redacted] ferme les yeux et semble faible. La personne accompagnant M.[redacted] va chercher un autre membre de la famille présent dans le domicile afin d'obtenir de l'aide.

Alors qu'ils arrivent auprès de M.[redacted] l'un d'eux l'entend faire deux respirations puis il cesse de respirer. Ils installent M.[redacted] au sol, contactent le 9-1-1 et entament des manœuvres de réanimation.

Des agents du Service de police de [redacted] ainsi que des techniciens ambulanciers paramédics se rendent sur les lieux. Les paramédics poursuivent les manœuvres de réanimation en vain, puisque M.[redacted] demeure en asystolie (absence d'activité électrique et cardiaque du cœur).

Le décès est par la suite constaté à distance par un médecin de[redacted] selon le protocole établi.

EXAMEN EXTERNE, AUTOPSIE ET ANALYSES TOXICOLOGIQUES

Une tomodensitométrie post mortem a été effectué[redacted]e [redacted] 2022. Dans son rapport, la radiologiste décrit la présence d'une maladie coronarienne athérosclérotique de modérée à sévère, un œdème pulmonaire et des membres inférieurs, des traces de liquide péricardique et une légère calcification de la valve aortique.

Page: 1,404 of/de 2,140
A2023000085

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

ANALYSE

Selon ses dossiers médicaux, M. [redacted] souffrait notamment d'hypertension artérielle, d'hypercholestérolémie, de diabète et d'arthrite rhumatoïde. Une médication en lien avec ces conditions lui était d'ailleurs prescrite ainsi qu'une anticoagulothérapie.

Selon un proche, lorsque M. [redacted] avait reçu son second vaccin contre la COVID-19 en juillet 2021. Il avait ressenti des douleurs musculaires et une grande faiblesse, qui l'empêchait même de se lever, moins de 24 heures après avoir sa vaccination.

C'est en raison de cette forte réaction que des membres de la famille s'étaient assurés d'être présents auprès de M. [redacted] dans les heures qui suivraient l'administration de sa troisième dose.

La tomodensitométrie met en évidence une importante maladie coronarienne athérosclérotique ainsi qu'un œdème au niveau des poumons et des jambes. Cela est suggestif d'un tableau d'insuffisance cardiaque, lequel est aussi compatible avec le fait que peu de temps avant son décès, M. [redacted] a déclaré se sentir essoufflé.

Toutefois, ces symptômes peuvent aussi être compatibles avec une myocardite ou une péricardite, tout comme la présence de liquide péricardique qui a aussi été observée lors de la tomodensitométrie. Des cas de myocardites et de péricardites à la suite d'une immunisation contre la COVID-19 (principalement après la seconde dose du vaccin à ARNm — ce qui correspond à la vaccination reçue par M [redacted] ont d'ailleurs été rapportés dans des rapports internationaux.

Dans les circonstances, la relation temporelle entre le vaccin et l'événement cardiaque qui a entraîné le décès de M. [redacted] m'apparait prépondérante.

CONCLUSION

M [redacted] est décédé des complications d'une maladie coronarienne athérosclérotique, probablement consécutivement à la vaccination contre la COVID-19.

Il s'agit d'un décès accidentel.

Je soussignée, coroner, reconnais que la date indiquée, et les lieux, les causes, les circonstances décrits ci-dessus ont été établis au meilleur de ma connaissance, et ce, à la suite de mon investigation, en foi de quoi j'ai signé, à [redacted] ce [redacted] 2022.

Canada Vigilance Adverse Reaction Reporting Form

Report of suspected adverse reactions to marketed health products in Canada

See instructions and information on adverse reaction reporting and confidentiality on Page 2.

Complete all mandatory items, marked by a *, and provide as much information as possible for the remaining items. PROTECTED WHEN COMPLETED – B**

A. Patient Information

1. Identifier [redacted]

2. Age	3. Sex*	4. Height	5. Weight
37 ☒ Years ☐ Months	☒ Male ☐ Female	_____ cm _____ feet	_____ kg _____ lbs

B. Adverse Reaction

1. Outcome attributed to adverse reaction (Select all that apply)

- ☒ Death: (yyyy-mm-dd)
- ☐ Life-threatening
- ☐ Hospitalization
- ☐ Hospitalization – prolonged
- ☐ Disability
- ☐ Congenital malformation
- ☐ Required intervention to prevent damage/impairment
- ☐ Other:

2. Reaction date (yyyy-mm-dd): 2022[redacted]

3. Report date (yyyy-mm-dd): 2022-[redacted]

4. Describe reaction or problem*

May 31, 2021 - Pfizer COVID-19 Vaccine
July 17, 2021 - Pzizer Vaccine

Family stated he was ill right after the third Moderna vaccine on [redacted] He phoned the physician and received betahistine and Zofran on [redacted] He had a witnessed cardiac arrest [redacted] He was resuscitated in hospital but transferred to another hospital for coronary angiogram. His report was cardiac results were pristine. He was found to have an intracerebral hemorrage. He was declared brain dead [redacted]. Underwent organ donation [redacted] Post mortem examination ordered and found no anatomical cause of death. Family informed his manner of death is Undetermined. Family believes this was vaccine related.

5. Relevant tests/laboratory data (including dates (yyyy-mm-dd))

Original blood samples were lost and could not be tested. However, hard copy results found from first day in hospital did not show thrombocytopenia. This did occur later in the admission. There were no thromoses compativle with a vaccine reaction.

6. Relevant history and pre-existing medical conditions (e.g. allergies, pregnancy, smoking/alcohol use, hepatic/renal dysfunction)

Nil

C. Suspected Health Product(s)

1. Name*, strength and manufacturer (if known)

#1 Modema COVID-19 mRNA SPIKEVAX

#2

2. Dose, frequency and route used

#1 0.2 mg/ml, 0.25 ml | #2

3. Therapy dates (or duration)

#1 From (yyyy-mm-dd) - To (yyyy-mm-dd): 2022-[redacted] | #2 From (yyyy-mm-dd) - To (yyyy-mm-dd)

4. Indication for use

#1 COVID-19 vaccine | #2

5. Reaction abated after use stopped or dose reduced

#1 ☐ Yes ☐ No ☒ Does not apply | #2 ☐ Yes ☐ No ☐ Does not apply

6. Lot #

#1 02510014
#2

7. Expiration

#1 (yyyy-mm-dd)
#2 (yyyy-mm-dd)

8. Reaction reappeared after reintroduction

#1 ☐ Yes ☒ No ☐ Does not apply | #2 ☐ Yes ☐ No ☐ Does not apply

9. Concomitant health products, excluding treatment of reaction (name, dose, frequency, route used and therapy dates (yyyy-mm-dd))

Betahistine and Zofran (information unavailable)

10. Treatment of reaction, including dates (yyyy-mm-dd)

See #4: 2022-[redacted] to 2022[redacted]

D. Reporter Information

1. Name*, occupation, address, telephone number*

[redacted]

2. Health professional? ☒ Yes ☐ No

3. Reported to manufacturer? ☐ Yes ☒ No

Dear Mr[redacted]

I would like to acknowledge receipt of your most recent email sent to Prime Minister Justin Trudeau.

At the outset, I would like to express my heartfelt sympathies for the loss of your mother. My thoughts go out to you. Please be assured that your comments have been carefully reviewed.

I have taken the liberty of forwarding your email to the Honourable Jean-Yves Duclos, Minister of Health, so that he may also be made aware of your most recent correspondence.

Once again, thank you for writing.

Re: Adverse Reaction Number 001033681

Dear [redacted]

Thank you for submitting an adverse reaction report to the Canada Vigilance Program on 2023-01-25, regarding the following health product(s):

COVID-19 VACCINE

The information that you included in your report has been recorded in the Canada Vigilance Program database and assigned the Adverse Reaction Number 001033681. Please reference this number should you wish to report additional information on this event. Please note that Health Canada will contact you about your report only if additional information is required for its surveillance activities.

The Canada Vigilance Program is Health Canada's post-market surveillance program that collects and assesses reports of suspected adverse reactions to health products that have been submitted by manufacturers and by hospitals, or by health professionals and consumers either directly to Health Canada or via the manufacturers and/or hospitals.

The information from adverse reaction reports as well as information from other sources of data is used to determine whether the benefits of a given health product continue to outweigh its risks and to take appropriate action to minimize any new risks. Such actions may include the update of the label of a health product in its authorized Canadian monograph, risk communication(s) to inform Canadians about possible new adverse reactions and/or a recall of the product.

For information on health products authorized for sale in Canada, you may wish to consult the following:

- Drug Product Database:
https://health-products.canada.ca/dpd-bdpp/index-eng.jsp

- Licensed Natural Health Products Database:
https://health-products.canada.ca/lnhpd-bdpsnh/index-eng.jsp

- Canada Vigilance Adverse Reaction Online Database:
https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada/adverse-reaction-database.html

- Health Canada's advisories, recalls and other communication on health products:
https://www.canada.ca/en/health-canada/services/drugs-health-products/advisories-warnings-recalls.html

We would like to thank you once again for your report, as your contribution and commitment to health product safety monitoring are appreciated.

Sincerely,

Canada Vigilance Program

Objet : Déclaration d'effet indésirable 001033681

Cher / Chère [redacted]

Nous vous remercions d'avoir communiqué des renseignements sur des effets indésirables à Santé Canada, le 2023-01-25, concernant le(s) produit(s) de santé suivant(s) :

COVID-19 VACCINE

L'information que vous avez fournie dans votre déclaration a été enregistrée dans la base de données du Programme Canada Vigilance sous le numéro d'effet indésirable 001033681. Veuillez indiquer ce numéro si vous voulez fournir des renseignements supplémentaires au sujet de cet incident. Veuillez noter que Santé Canada ne vous contactera à propos de votre rapport que si des informations complémentaires sont requises pour ses activités de surveillance.

Le Programme Canada Vigilance est le programme de surveillance après la mise en marché de Santé Canada qui recueille et évalue les déclarations d'effets indésirables présumés associés aux produits de santé qui ont été soumises directement à Santé Canada par les professionnels de la santé et les consommateurs ou par l'entremise des détenteurs d'une autorisation de mise en marché ou des hôpitaux.

Les renseignements tirés des déclarations d'effets indésirables et d'autres sources de données servent à déterminer si les avantages d'un produit de santé donné continuent de l'emporter sur ses risques et à prendre les mesures appropriées pour minimiser les nouveaux risques. Ces mesures peuvent comprendre la mise à jour de l'étiquette d'un produit de santé dans sa monographie canadienne autorisée, la communication des risques pour informer les Canadiens au sujet des nouveaux effets indésirables possibles et/ou le retrait du produit.

Pour obtenir des renseignements sur les produits de santé dont la vente est autorisée au Canada, vous pouvez consulter les pages Web suivantes :

- Base de données sur les produits pharmaceutiques :
https://produits-sante.canada.ca/dpd-bdpp/index-fra.jsp

- Base de données sur les produits de santé naturels homologues :

ADDITIONAL INFORMATION

7+13. DESCRIBE REACTION(S) continued

feeling unwell (Feeling unwell), was dizzy (Dizzy) and fell down and fell down again (Fall), during Eligard (leuprolide acetate) 30 mg treatment for prostate cancer. COVID vaccine for COVID prophylaxis was considered a co-suspect medication. This case concerned an 85 year-old male patient. The reports were sent to Tolmar on [redacted] 2021 and on [redacted] 2021, respectively. The needle component of the constituent device was not identified in the report.

The patient's medical history was not reported. Current condition included prostate cancer.

Concomitant medications were not provided.

On 07 Nov 2016, the patient began receiving Eligard 30 mg, every four months, subcutaneously, for the treatment of prostate cancer (Lot number and Expiration date not reported). On 14 Nov 2020, the patient received his latest Eligard 30 mg dose, every four months, subcutaneously (Lot number carton: not reported; Expiration date: not reported; Lot number Syringe A: 11188A; Expiration date: Dec 2021; Lot number Syringe B: 11187A; Expiration date: Jan 2022) for the treatment of prostate cancer. On an unknown date, the patient received the COVID vaccine (dose, frequency, route of administration not reported) for COVID prophylaxis.

The patient's wife reported that on an unspecified date, time to onset unknown after Eligard treatment, but described as after he "just got the COVID vaccine," the patient felt unwell, was dizzy and fell down. The patient's wife reported that the patient was still experiencing side effects from the COVID vaccine (it was not specified if they were the same side effects initially reported) and the patient fell down again. The patient's wife asked to postpone the patient's injection from [redacted] 2021 to [redacted] 2021 so the patient could rest. No further details were provided.

Action taken for COVID vaccine in response to the events was unknown and for Eligard treatment was dose not changed (ongoing); de-challenge and re-challenge were not applicable. The outcome of the events was not recovered/not resolved.

No laboratory data information was provided.

The reporter did not assess seriousness of the events and assessed causality of the events with respect to Eligard therapy as not related.

On [redacted] 2021, follow-up information was received by Sanofi (Mfr no.: 2021SA080066) from a consumer (Patient's Wife) and was sent to Tolmar on [redacted] 2021. Added new serious event of "Patient passed away (Death)". Updated action taken, dechallenge and rechallenge and upon recipt of follow-up information. This case was upgraded to serious.

Per the reporting patient's wife, the nurse performed a follow up call to see if the patient was feeling better and if ready for his next injection and the wife reported the patient passed away the other day (Date not specified). The cause of death was unknown. The patient was 85 years-old at the time of the event and it was unknown whether if an autopsy was performed. The action taken with the suspect product, dechallenge and rechallenge were not applicable. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

Evaluator Comment (Tolmar): This elderly male patient passed away during Eligard therapy for prostate cancer (serious due to a fatal outcome (death)). Before his death, he fell (Fall) and experienced Feeling unwell and was Dizzy. COVID-19 vaccine is a co-suspect. Fall, Feeling unwell, and Dizzy are assessed as non-serious. The causal role of Eligard in the patient's death is considered not assessable due to lack of information regarding the cause of death, autopsy results, the clinical state of underlying prostate cancer, circumstances preceding patient's death, other relevant medical history, all concomitant medications received and supportive investigations and diagnosis relevant to cause of death. However, the underlying prostate cancer and the patient's age are pre-existing risk factors. The causal role of Eligard for Fall, Feeling unwell, and Dizzy is assessed as not related to Eligard therapy. As reported, co-suspect COVID-19 VACCINE can likely explain the Dizziness and Feeling unwell, which led to his Falls. The events are assessed as not related to the device component of Eligard.

EXTERNAL

Good morning,

Re: Health Canada Follow-Up Clarification Request

As a result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified individual case safety reports (ICSRs) where clarification is needed. Please investigate, clarify and resubmit case information for the following ICSRs that require clarification or have discrepancies which may impact case evaluation and/or signal detection:

MAH Case Number	Canada Vigilance Case Number	Clarification Requested
Safety report ID: 21CA025930 reported to HC on behalf of Tolmar, Inc Fort Collins, CO, USA concerning suspect drugs: **ELIGARD** (Sanofi-Aventis Canada Inc.) and co-suspect: "**COVID-19 vaccine**" (unspecified MAH) and stating the following in the case narrative: Initial report and one follow up report that were received by **Sanofi (MFR No.: 2021SA080066) via a Patient Support Program** (PSP_LEUPROLIDE[redacted]) Received by Health Canada on: 19/03/2021	000943098	Specifically, our evaluators wish to request the following information: • Please provide any information regarding the specific COVID-19 vaccine administered, including type of vaccine, date of administration, lot #, first or second dose, etc. • Please provide any information pertaining to any medical diagnosis pertaining to the cause of death and any autopsy details, if available. • Please provide any information pertaining to the patient's general clinical state at the time of vaccination. Specifically, please provide any details regarding the status of the patient (e.g. bedridden, up with assistance, independent etc.), and laboratory testing (eg. Renal function, hematology, liver function). • Please provide any information pertaining to other medications, particularly sedatives and analgesics. • Please provide any symptoms associated with the vaccination (e.g. fever etc.).

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

		• Please provide any information regarding any evaluation or treatment after the fall.

Please provide a response within 15 days upon receipt of this correspondence, March 23rd, 2021, in order to allow for sufficient time for case evaluation. Kindly send response to our generic Canada Vigilance COVID-19 Vaccine account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca) with a cc to myself, Michelle Séguin: michelle.seguin@canada.ca.

If you require further information within the scope of this request, please do not hesitate to contact me.

Thank you in advance for your much appreciated collaboration.

Sincerely,

Michelle Séguin on behalf of:

Dear Ms. Séguin,

In an effort to gather additional information and answers to your questions below, Sanofi has actively attempted to reach the Healthcare professional involved in the care of this patient.
To date, no additional information has been received by Sanofi relative to this report. Shall further information become available, Sanofi will ensure that this is submitted to HC via the standard expediting reporting procedure.

Thank you,
Kind regards,

ATIA - 19(1)

ADDITIONAL INFORMATION

7+13. DESCRIBE REACTION(S) continued

wife, who reported that the patient just got the COVID vaccine and he was feeling unwell (Feeling unwell), was dizzy (Dizzy) and fell down and fell down again (Fall), during Eligard (leuprolide acetate) 30 mg treatment for prostate cancer. COVID vaccine for COVID prophylaxis was considered a co-suspect medication. This case concerned an 85 year-old male patient. The reports were sent to Tolmar on [redacted] 2021 and on [redacted] 2021, respectively. The needle component of the constituent device was not identified in the report.

The patient's medical history was not reported. Current condition included prostate cancer.

Concomitant medications were not provided.

On 07 Nov 2016, the patient began receiving Eligard 30 mg, every four months, subcutaneously, for the treatment of prostate cancer (Lot number and Expiration date not reported). On 14 Nov 2020, the patient received his latest Eligard 30 mg dose, every four months, subcutaneously (Lot number carton: not reported; Expiration date: not reported; Lot number Syringe A: 11188A; Expiration date: Dec 2021; Lot number Syringe B: 11187A; Expiration date: Jan 2022) for the treatment of prostate cancer. On an unknown date, the patient received the COVID vaccine (dose, frequency, route of administration not reported) for COVID prophylaxis.

The patient's wife reported that on an unspecified date, time to onset unknown after Eligard treatment, but described as after he "just got the COVID vaccine," the patient felt unwell, was dizzy and fell down. The patient's wife reported that the patient was still experiencing side effects from the COVID vaccine (it was not specified if they were the same side effects initially reported) and the patient fell down again. The patient's wife asked to postpone the patient's injection from [redacted] 2021 to [redacted] 2021 so the patient could rest. No further details were provided.

Action taken for COVID vaccine in response to the events was unknown and for Eligard treatment was dose not changed (ongoing); de-challenge and re-challenge were not applicable. The outcome of the events was not recovered/not resolved.

No laboratory data information was provided.

The reporter did not assess seriousness of the events and assessed causality of the events with respect to Eligard therapy as not related.

On [redacted] 2021, follow-up information was received by Sanofi (Mfr no.: 2021SA080066) from a consumer (Patient's Wife) and was sent to Tolmar on [redacted] 2021. Added new serious event of "Patient passed away (Death)". Updated action taken, dechallenge and rechallenge and upon receipt of follow-up information. This case was upgraded to serious.

Per the reporting patient's wife, the nurse performed a follow up call to see if the patient was feeling better and if ready for his next injection and the wife reported the patient passed away the other day (Date not specified). The cause of death was unknown. The patient was 85 years-old at the time of the event and it was unknown whether if an autopsy was performed. The action taken with the suspect product, dechallenge and rechallenge were not applicable. The outcome of the event was fatal.

The reporter assessed the event as serious (Death) and did not assess the causality of the event regarding Eligard therapy.

On 26 May 2021, follow up information was received by Sanofi (Mfr. No.: 2021SA080066) from a healthcare professional and was sent to Tolmar on 28 May 2021. Added healthcare professional as new reporter and causality assessment from this new reporter. Added date and cause of death. Updated event description from passed away (Death) to passed away due to natural prostate cancer progression (Progression of prostate cancer). Upon follow-up information was received the case met different reportability criteria. It was submitted as expedited report previously, but it does now meet criteria for periodic reporting.

On [redacted] 2021, patient passed away due to natural prostate cancer progression.

The healthcare professional assessed the event passed away due to natural prostate cancer progression as serious (Death) and did not consider the patient´s death was caused by Eligard therapy. Seriousness and causality assessment for the previously reported events was not provided.

No additional details were provided.

Evaluator Comment (Tolmar): This elderly male patient passed away due to natural prostate cancer progression during Eligard therapy for prostate cancer (serious due to a fatal outcome (death)). Before his death, he fell (Fall) and experienced Feeling unwell and was Dizzy. COVID-19 vaccine is a co-suspect. Fall, Feeling unwell, and Dizzy are assessed as non-serious. The causal role of Eligard in the natural prostate cancer progression is assessed as not related as the event can be explained by the inherent nature of malignancy to progress with time. The causal role of Eligard for Fall, Feeling unwell, and Dizzy is assessed as not related to Eligard therapy. As reported, co-suspect COVID-19 VACCINE can likely explain the Dizziness and Feeling unwell, which led to his Falls. The events are assessed as not related to the device component of Eligard.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable consumer. A 90-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), on [redacted]2020 at age of 90 years old at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient died of COVID-19 on Wednesday [redacted]2021) at the Hospital. The patient was given the vaccine on [redacted]2020 and was due to be vaccinated 21 days later. His second dose was delayed because of provincial plan to vaccinate as many people as quickly as possible. The patient started developing symptoms 18 days after his inoculation so the second dose would not have helped him. No other details provided.

Information on lot/batch number has been requested.

Follow-up (26Jan2021): New information received from a contactable consumer includes: reporter information.

Follow up(28Jan2021): No follow up attempts are needed, No further information is expected.

Follow-up (02Mar2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer. An 83-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number unknown), via an unspecified route of administration in the right arm on [redacted]2021 12:00 at a single dose for COVID-19 immunisation. Medical history included congestive heart failure, cancer (Colon, liver & possibly bowel), diabetes, dementia, fall on [redacted]021, fractured her skull on [redacted]021, and palliative therapy from Nov2020. Concomitant medication included furosemide (LASIX); bisoprolol; glyceryl trinitrate (NITRODERM), and clopidogrel bisulfate (PLAVIX). The patient fell at home in her bedroom. She was conscious when speaking with her daughter, but then was unresponsive when a family member came to help her up off the floor and had passed away on [redacted]2021. As of [redacted]2021, the doctor said that she was unaware that the patient had passed away. She said that it is unlikely to be linked to the vaccine as this patient had a lot of diseases and was taken a lot of medication. She cannot provide more information as she was unaware of what happened. As of [redacted]2021, the reporter could not provide any information pertaining to the cause of death as indicated on the death certificate. The reporter could not provide any information regarding any concomitant medications. Specifically, any analgesics or sedatives. The reporter could also not provide any information regarding any recent laboratory results, any information regarding clinical status prior to terminal event. She reported that the reasons for her prior falls would have been weakness and fatigue from her heart condition. The patient was not diagnosed with COVID-19 before the vaccination. The patient was not tested positive to COVID-19 after the vaccination. The outcome of event fell was unknown. The patient passed away on [redacted]021. An autopsy was not performed.

Information about Lot/Batch number has been requested.

Follow-up [redacted]2021): New information reported from a contactable physician via safety phone line included: new reporter, new causality assessment provided, clinical course details.This follow-up report is also being submitted to amend previously reported information: event "fell" added.

Information about Lot/Batch number has been requested.

Follow-up [redacted]021): New information was received from the same contactable consumer includes: clinical course details.

No follow-up attempts required. No further information expected
BNT162B2 approved under Interim Order in Canada.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

The company cannot completely exclude a reasonable possibility that the administration of vaccine BNT162B2 could have contributed to the patient's demise. The company processes "death cause unknown" cases as possibly related and documents them as related in the global safety database unless information is provided that allows the Company to exclude that there is a reasonable possibility of relatedness to the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable consumer (patient's daughter). An 89-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration, administered in the left arm on [redacted]2021 at 16:30 (Lot number: Not reported, Expiration date: Not reported) (at the age of 89-year-old) as a single dose for COVID-19 immunization. The patient medical history included Parkinson's disease (slow type for several years, difficult to control, difficulty walking, dressing, dizziness and was forgetting more frequently) from 1980 and ongoing, ongoing dyspepsia, ongoing depression (onset date, approximately 3 years ago), diarrhoea from an unknown date and unknown if ongoing, ongoing dizziness and was forgetting more frequently and her father's health condition was deteriorating. Patient had no allergies to medications, food, or other products. Patient had no serious heart condition or other conditions. His last blood test was perfect. Concomitant medications included finasteride taken for an unspecified indication; pantoprazole taken for an unspecified indication; carbidopa/levodopa (APO-LEVOCARB) taken for an unspecified indication; tamsulosin taken for an unspecified indication; loperamide hydrochloride (LOPERAMID) taken for diarrhoea; mirtazapine (MIRTAZAPIN) taken for an unspecified indication, for all concomitants start and stop date were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. The patient was not diagnosed with COVID-19 prior vaccination. The reporter stated that her father received the vaccine and felt well after administration. On [redacted]021, the patient had cerebrovascular accident. It was reported that the patient was found unconscious and his wife called the emergency line. The reporter stated that, when the ambulance arrived, the patient still had a pulse, and they mentioned that the reaction was probably neurological. When the patient arrived at the hospital, they called his wife to inform her that he was not feeling well and when patient's wife arrived at the hospital patient had already passed away. Cerebrovascular accident was not confirmed, but daughter and wife thought what the patient experienced. The reporter stated that her father's health condition was deteriorating for the past few years. The patient did not receive any treatment for the event. Since the vaccination, the patient has not been tested for COVID-19. The patient died on [redacted]2021. An autopsy was not performed.

Follow-up (09Apr2021): The following information has been reported by the same contactable consumer (patient's daughter) which included significant information regarding patient medical history and event information was added.

Follow-up (12Apr2021): New information reported from the same contactable consumer (patient's daughter) received via the Medical Information includes concomitant medications.

Follow-up (18May2021): This follow-up is being submitted to notify that the batch/lot number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (patient's son), a contactable physician and Other Health Professional. An 85-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot Number: ER1742), intramuscular in left deltoid, on [redacted]2021 at 15:05 PM, at a single dose, for COVID-19 immunization. The patient's medical history included severe ulcerative colitis and asthma since a long time; the patient used to practice yoga and weighcement bags every week for muscular fitness. There were no concomitant medications. Past drug history included budesonide/formoterol fumarate (SYMBICORT) for asthma. There were no other vaccinations within four weeks prior to the first administration date of the suspect vaccine. The patient's son was just calling to find out about the side effects with the COVID-19 vaccine. The patient got vaccinated and then 3 weeks later [redacted]2021), he was nauseous and had explosive diarrhea and generalized weakness. The patient had nausea and vomiting on [redacted]2021 for which the patient had ginger to chew as therapeutic measures. The patient died of a heart attack on [redacted]2021 (passed away). The patient was found dead in his residence on [redacted]2021. According to the patient's son, patient had his last health check-up 2 months ago [redacted]2021) and was in perfect condition, had no health issues, was practicing yoga and weighing cement bags every week for muscular fitness. The patient's son and his family are shocked and wanted answers. The doctor confirmed that the death is not associated with an anaphylactic shock. He confirmed that heart attack (heart stopped) is the cause of death. The doctor has not seen patient for the last 18 months. The patient was suffering from a severe ulcerative colitis and asthma since a long time and the doctor had prescribed budesonide/formoterol fumarate (SYMBICORT) to the patient in the past. He doesn't know if the death is related to the vaccine besides the fact that it is close in time. The physician said that the patient was seeing another doctor at the medical clinic. The outcome of heart attack was fatal. The outcome of the remaining events was unknown. The patient died on [redacted]2021. It was not reported if an autopsy was performed.
Conclusion: The complaint for "PFIZER-BIONTECH COVID-19 VACCINE" was investigated. The investigation included reviewing the involved batch records, deviation investigation and an analysis of the complaint history for the reported lot and product type. The final scope was determined to be the associated lot(s) of the reported lot ER1742. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality, regulatory, validation and stability. PGS Puurs concludes that the reported defect is not representative of the quality of the batch and the batch remains acceptable. The NTM process determined that no regulatory notification was required. The reported defect could not be confirmed. No root cause or CAPA were identified as the complaint was not confirmed
Follow-up [redacted]2021): New information reported from a contactable physician includes: additional reporter, physician's causality assessment (death not associated with an anaphylactic shock and unknown if death has causal relationship with the vaccine besides the temporal relationship), patient's race, additional medical history (ulcerative colitis and asthma) and past drug history.

Follow-up attempts are completed. No further information is expected.

Follow-up [redacted]021): New information received from a contactable healthcare professional (medical assistant) includes additional reporter.

Follow-up [redacted]2021): New information has been reported as conclusion following investigation by the Product Quality Group included: investigation results.

No follow-up attempts are needed. No further information is expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The Company concurs with the HCP reporter that the fatal event heart attack represents an intercurrent medical condition and unrelated to BNT162B2.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a female patient (age not provided) of Unknown ethnic origin.

The patient's past and current medical history included thromboembolectomy (dates not reported) and angioplasty (dates not reported). No concomitant products were reported.

The patient received Covishield Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadoxl ncov-19)) of dose unknown once/single administration, via intramuscular route, for product used for unknown indication on an unknown date. On an unknown date, the patient experienced vaccine-induced prothrombotic immune thrombocytopenia (vipit) (preferred term: Immune thrombocytopenia). On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis). On an unknown date, the patient experienced cerebral blood clot (preferred term: Thrombosis). On an unknown date, the patient experienced thrombocytopenia with thrombosis (preferred term: Thrombosis with thrombocytopenia syndrome). On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia). On an unknown date platelet count was conducted and found to be less than 150x109 per L.

Action taken with Covishield Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was Not Applicable. The outcome of the event(s) of vaccine-induced prothrombotic immune thrombocytopenia (vipit), thrombosis, thrombocytopenia with thrombosis and thrombocytopenia was unknown. The patient died from the event of cerebral blood clot on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was cerebral blood clot.

The event such as cerebral blood clot was considered serious by the reporter due to death. The event such as vaccine-induced prothrombotic immune thrombocytopenia (vipit) was considered serious by the reporter due to hospitalisation. The events such as vaccine-induced prothrombotic immune thrombocytopenia (vipit), thrombosis, thrombocytopenia with thrombosis and thrombocytopeniawere considered serious by the reporter due to important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow up information received by AstraZeneca/MedImmune on 14-04-2021 from consumer via spontaneous source: New serious event of induced prothrombotic immune thrombocytopenia was added as new event, reporter consumer added, narrative amended.

Follow up of Insignificant information received by AstraZeneca/MedImmune on 20-04-2021 from consumer via spontaneous source: New seriousness criteria of hospitalised for the event of vaccine-induced prothrombotic immune thrombocytopenia (vipit.) added. Reporter other added, narrative amended.

Summary of follow-up information received by AstraZeneca on 21-NOV-2021. Regulatory authority with id was updated, Indication for suspect as product used for unknown indication was updated, frequency as once was updated and THROMBOCYTOPENIA WITH THROMBOSIS was updated. Corrected Report 26-NOV-2021: Lot number was removed,Age group updated to NI, lab as report platelet count was updated,and disease such as ANGIOPLASTY and THROMBOEMBOLECTOMY, Action taken was updated to Not Applicable and narrative updated.
CAUSE OF DEATH: CEREBRAL BLOOD CLOT Lab Test #1 : 10035525
COVISHIELD is a Verity Pharmaceuticals Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Thrombosis (Preferred Term: Thrombosis) in combination with thrombocytopenia (Preferred Term: Thrombosis with thrombocytopenia syndrome, Preferred Term: Thrombocytopenia and Preferred Term: Immune thrombocytopenia) is listed in the company core data sheet of AZD1222. However, since the event Thrombosis was reported with a fatal outcome, it is considered unlisted. Patient's past and current medical history of thromboembolectomy and angioplasty may suggest a prior coagulation disorder that could be considered as a confounding factor for the event of Thrombosis. The cause of death was cerebral blood clot. Due to limited information on patient´s age, personal and family medical history, baseline health condition prior to vaccination, circumstances leading to the event, vaccination date and onset dates of the events, risk factors (malignancy, recent surgery, arrhythmia, deep vein thrombosis and familial blood clotting disorders), etiological and diagnostic work up (physical and clinical evvaluation, blood chemistry panel and cell count, coagulation panel with D dimer, imaging studies, autopsy report if performed), physician report/hospital discharge summary, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable physician (patient's daughter) and other healthcare professional. A 73-year-old male patient received the second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EN1196), intramuscular in the left deltoid on [redacted]2021 as single dose for COVID-19 immunization (Age at vaccination: 73 years). Medical history included dementia mixed vascular and Alzheimer's both from 2016 and ongoing, and hypertension from 2011 and ongoing dislipidemia and prostate cancer. Family history includes dementia with siblings [redacted] but no seizures or strokes. Concomitant medications included nabilone, risperidone (RISPERDAL), and trazodone all taken for agitation from an unspecified start date and ongoing. Patient also received enalapril (VASOTEC) and hydrochlorothiazide (HCT) all for hypertension . The patient previously received the first dose of bnt162b2 (Lot number: Lot EP6017) on [redacted]2021 in the left deltoid as a single dose for COVID-19 immunization. Prior to the vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not have any known allergies. The patient had no other vaccine within four weeks. On [redacted]2021 02:00, the patient had presumed ischemic stroke provoking seizure with some residual cerebellar deficits including difficulty with gait, balance, and swallowing. On [redacted]2021 03:00, the patient was found unconscious for 20 minutes until [redacted]2021 03:20. The patient was sent to the emergency room. Trazodone was reduced. He was not febrile and was doing relatively well. The patient was not admitted and was discharged from the hospital emergency room the same day as he arrived, to get palliative care at home. Ischemic stroke and unconscious were considered as life threatening and all the events on [redacted]2021 had caused disability to the patient. The patient's outcome was recovered with sequala. The patient underwent lab tests and procedures which included blood test: unknown result on an unspecified date and computerized tomogram (CAT scan): no bleed, no mass on [redacted]2021. On the day of the death on [redacted]021, the paramedics were called because the patient had sepsis, was febrile and as the patient wishes were to stay home, they gave him morphine and scopolamine a few times. The patient died at home. They concluded that the death was probably due to medication. The doctor was unsure if the vaccine had a role but wanted to report this event. She is still thankful to Pfizer because she received the vaccine and she feel safer when working. The patient died on [redacted]2021. It was not reported if an autopsy was performed. According to the physician the patient's daughter called stating he likely died of aspiration pneumonia and became septic.

Follow-up [redacted]021): New information received from the same contactable physician (patient's daughter) includes: medical history, concomitant medications, new events (sepsis, febrile, death), event outcome.

Information on the lot/batch number has been requested.

Follow-up [redacted]2021): This is a follow-up report from the same contactable healthcare professional (physician) for the same patient.
New information included: medical history updated, new fatal event pneumonia aspiration, concomitant medication updated, date of death changed, event death deleted.

Follow-up attempts completed. No further information expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The 73-year-old patient had medical history included dementia mixed vascular, Alzheimer's, and hypertension, and was on multiple concomitant medication(s). Based on information available, the ischemic stroke provoking seizure with some residual cerebellar deficits including difficulty with gait, balance, and swallowing were most likely an intercurrent disease, and unlikely causally related to vaccine bnt162b2. Pneumonia aspiration, Sepsis, Pyrexia, Unconscious are considered as intercurrent or underlying conditions which are not related to the suspected drug.The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.

Canada Vigilance AER#:	E2B_04106577 (1)	Page#6

Summary (B.5)

Case narrative (B.5.1)

This solicited report was received from a physician regarding to a 45 year old male patient enrolled in a Patient Support Program entitled \"Merck Care Oncology (Bayshore)\" conducted by Bayshore Healthcare Ltd. Information regarding the patient's concomitant therapies, medical history and historical drugs was not provided.

On [redacted]2021, the patient started therapy with pembrolizumab (KEYTRUDA) 400 milligram, every 6 weeks (route of administration, lot # and expiration date were not provided) for head and neck cancer metastatic (off label use).

Follow-up information was received from the patient's common law via Bayshore on [redacted]2021.
On an unknown date (reported as "previously"), the patient was tested for coronavirus disease 2019 (COVID 19), however the result was not provided, and he was vaccinated with an unspecified sars-cov-2 vaccine (reported as COVID 19 vaccine), (dose, frequency, route of administration, indication, lot number and expiration date were not provided). Approximately on [redacted]2021, the patient started experiencing severe shortness of breath despite on oxygen and medications. The physician was notified and thought it was pleural effusion, and said that the patient needed to be drained. They also recommended a chest X-ray which was done on an unspecified date and confirmed lung infection. Since [redacted]2021, the patient was hospitalized with a lung infection. They were not sure if patient would be discharged home or hospice, they were waiting for a PICC line and DNR to be set up. At the reporting time, the outcome of the event was unknown. Therapy with pembrolizumab (KEYTRUDA) was continued. The causality assessment between pembrolizumab (KEYTRUDA), unspecified sars-cov-2 vaccine and lung infection was not provided by the reporter.

Upon internal review, pneumonia was considered to be medically significant.

Follow-up information was received from the physician's assistant via [redacted]2021.
On [redacted]2021, the patient died. The cause of death was not provided. It was not reported if an autopsy was performed. The reporter informed health records and cancelled all appointments. The causality assessment between the patient's death, pembrolizumab (KEYTRUDA) and the unspecified sars-cov-2 vaccine was not provided.
Company Causality Assessment: Based on the limited information currently available for this case, a reasonable possibility to suggest a relationship between the therapy and the reported events of pneumonia and death cannot be established. Additional information regarding concurrent conditions, medical history, diagnostic work ups, clinical course, autopsy information (if done), and outcome for pneumonia is essential for further assessment.

Company Comment- No changes to the KEYTRUDA product safety information are warranted at this time. Merck and Co., Inc., Kenilworth, N.J., USA, known as MSD outside of the US and Canada, continues to monitor the safety profile of KEYTRUDA.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a 54 year old female patient.

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN), via intramuscular route, for product used for unknown indication on [redacted]2021.

On an unknown date, the patient experienced cerebral blood clot/ cerebral thrombosis (preferred term: Cerebral thrombosis). On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia). On an unknown date, the patient experienced vaccine-induced immune thrombotic thrombocytopenia (vitt) (preferred term: Immune thrombocytopenia). On an unknown date, the patient experienced fatigue (preferred term: Fatigue). On an unknown date, the patient experienced headache (preferred term: Headache).

The family said the patient experienced severe headaches and fatigue in the days that followed after vaccination. She was hospitalized locally and then transferred to the another as her condition worsened. She died of cerebral thrombosis.

The action taken for Covid-19 Vaccine Astrazeneca was not applicable with respect to all the events.

The patient died from the event of cerebral blood clot/ cerebral thrombosis, thrombocytopenia, vaccine-induced immune thrombotic thrombocytopenia (vitt), fatigue and headache on [redacted]2021.

An autopsy was not performed. The cause of death was cerebral blood clot/ cerebral thrombosis, thrombocytopenia, vaccine-induced immune thrombotic thrombocytopenia (vitt), fatigue and headache.

The events were considered serious (death, hospitalised and important medical event).

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca on [redacted]2021 from consumer via spontaneous source: Vaccine Dose, informed as First Dose, vaccination date were added and Patients death date were confirmed.

Follow-up of insignificant information received by AstraZeneca on [redacted]2021 from a consumer as spontaneous source: Additional 2 reporters were added. No other significant information was provided.

Summary of follow-up information received by AstraZeneca/MedImmune 06-SEP-2021: Spontaneous report from canadian health authority via consumer: Reporter Regulatory Authority was added, For suspect indication was added, Events CEREBRAL THROMBOSIS, THROMBOCYTOPENIA was added, For events FATIGUE, HEADACHE seriousness criteria was updated.CAUSE OF DEATH: CEREBRAL BLOOD CLOT/ CEREBRAL THROMBOSIS CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: VACCINE-INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) CAUSE OF DEATH: FATIGUE CAUSE OF DEATH: HEADACHE
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Thrombosis (Cerebral thrombosis) in combination with thrombocytopenia (Thrombocytopenia and Immune thrombocytopenia) is listed in the company core date sheet of AZD1222. However, since the events were reported with a fatal outcome, they are considered unlisted. Fatigue and Headache are listed adverse events for AZD1222. However, as the events are reported with the seriousness criteria of fatal, the events are considered unlisted. The patient died 14 days after vaccine administration. The cause of death was cerebral blood clot/ cerebral thrombosis, thrombocytopenia, vaccine-induced immune thrombotic thrombocytopenia (vitt), fatigue and headache. Due to limited information on event onset dates, the baseline health status of the patient before vaccination, details of the events, medical history, concurrent diseases, concomitant medications, risk factors (infection with HIV, hepatitis or H. pylori, leukemia, chemotherapy drugs, radiation therapy, autoimmune diseases such as lupus and rheummatoid arthritis, treatment with heparin, quinine, sulfa-containing antibiotics and anticonvulsants), diagnostic and etiological work-up (physical exam, complete blood profile, viral test, bone marrow biopsy, blood tests including anti-PF4 antibodies, thrombophilia screen, autoimmune screen, infection profile, last known platelet count before vaccine, haematologist review), autopsy report, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (reporting for husband). A 54-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection; Batch/Lot number was not reported), via an unspecified route of administration on [redacted]2021 as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that the reporter's husband (patient) passed away unexpectedly on [redacted]2021. The patient had a catastrophic intracerebral bleed the morning of [redacted]2021. The patient was comatosed then lost all vital functions on [redacted]2021. There were no prodromes. The patient had no history of hypertension (HTN). There was no explanation. Not a thrombotic event though. There was nothing specific in the bloodwork o[redacted]2021. The reporter stated potential aneurism, AV anastomosis or something third (AS REPORTED). The outcome of the events was unknown. The patient died on [redacted]2021. It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer reporting on behalf of the mother.
A 91-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot number was not reported), via an unspecified route of administration on 19Feb2021 as the first single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. It was unknown if the patient was pregnant. The patient experienced pulmonary embolism on [redacted]2021. The patient was hospitalized for the event on an unspecified date. Clinical course was as follows: Reporter's 91-year-old mother was vaccinated on [redacted]2021 with her first dose of the Pfizer-Biontech vaccine with no other issues. Twenty-one (21) days later, on [redacted]2021, the first symptoms that something was not right appeared. After being seen by nurses and a doctor, she was admitted to hospital and was treated for a pulmonary embolism with heparin. The reporter was not saying that the vaccine caused the embolism, but the chronology of events left them questioning. The event was reported with fatal outcome. The patient died on an unspecified date in 2021. It was unknown if an autopsy was performed.

Follow-up (10Jun2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

EXTERNAL

Re: Health Canada Follow-Up Clarification Request

Good afternoon Mr. [redacted]

Please allow us first to convey our deepest regrets with the recent loss of your dear grand-mother. We offer you our most sincere condolences during this difficult time of grief.

We are contacting you today to confirm receipt of the adverse event following immunization (AEFI) report submitted to the Canada Vigilance Program on April 2nd, 2021 regarding your grand-mother and the use of the COVID-19 Vaccine.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified the present individual case safety reports (ICSRs) where clarification is needed in order to complete the case evaluation.

We acknowledge that this is a challenging time to be requesting additional information from you. If it is easier, you may wish to request your grand-mother's physician or other health care provider to assist you, or to submit a reply on your behalf. Any information would be greatly appreciated.

Canada Vigilance Case Number	Clarification Requested
000944395	Would you kindly have any information of the following: - Please provide any information regarding your grand-mother's age, medical history and any concomitant medications. - Please provide any information regarding the COVID-19 vaccine administered. Specifically the trade name, date, and route of administration. - Please provide any information regarding the description of the adverse events. Specifically any investigations, and treatments. - Please provide any information regarding medical confirmation of the cause of death, and any autopsy results if available

May you please kindly respond to both myself, Michelle Séguin: michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Or, if you prefer, you may fax the requested information to the **Canada Vigilance Program fax at 1-866-678-6789**; please cite **case number 000944395** if replying by this means.

If you require further information within the scope of this request, please do not hesitate to contact me.

We thank you for your time and much appreciated collaboration.

Sincerely,

Michelle Séguin on behalf of:
The Canada Vigilance Program

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY). The report concerns a female patient of Unknown ethnic origin (age 52 years).

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadoxl ncov-19)) (batch number UNKNOWN), via intramuscular route, for product used for unknown indication on [redacted]2021.

On an unknown date, the patient experienced seizure (preferred term: Seizure). On an unknown date, the patient experienced vaccine induced immune thrombotic thrombocytopenia (vitt) (preferred term: Thrombosis with thrombocytopenia syndrome). On an unknown date, the patient experienced pain in extremity (preferred term: Pain in extremity). On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis). On an unknown date, the patient experienced thrombosis. (preferred term: Thrombosis). On an unknown date, the patient experienced chills (preferred term: Chills). On an unknown date, the patient experienced fatigue (preferred term: Fatigue). On an unknown date, the patient experienced headache (preferred term: Headache). On an unknown date, the patient experienced nausea (preferred term: Nausea). On an unknown date, the patient experienced fatal bleed in her brain (preferred term: Cerebral haemorrhage). On an unknown date, the patient experienced fever (preferred term: Pyrexia). On an unknown date, the patient experienced pains (preferred term: Pain). It was reported immune thrombocytopenia and Cerebral haemorrhage. Woman in her 50s was died from a rare blood clot condition after receiving the AstraZeneca-Oxford vaccine and reporter stated that woman was only the second confirmed case of vaccine-induced immune thrombotic thrombocytopenia (VIIT) in the province. Reporter confirms first death linked to AstraZeneca vaccine. The Canadian province reporter reported its first death of a patient from a rare blood clot condition after receiving the AstraZeneca (AZN.L) COVID-19 vaccine, its chief medical officer said. It stated her mom was suffering from fatigue, strong nausea, headache, fever and chills. The symptoms were continuing to get worse a full week after she received her first shot. Patient was died from a rare blood clot condition after receiving the AstraZeneca-Oxford vaccine. It stated her mother was turned away at the emergency room of Hospital last Thursday as her symptoms worsened. The next day the otherwise healthy woman suffered a fatal bleed in her brain. Patient had aches and pains after she received her first dose of the Oxford-AstraZeneca vaccine, but after about a week, things took a turn. She developed a headache that quickly got worse, so bad that her 19 years old daughter insisted they head to the emergency department to get it checked out. They said there was nothing they can do for me. Take some Tylenol, and go to bed and by the next morning, patient was in so much pain she could not get out of bed, she was taken to another hospital, where a CT scan confirmed a blood clot, and she was rushed to the hospital but suffered a seizure on the way. She died three days later, becoming one of three people in Canada who have died from extremely rare but serious blood clots linked to the AstraZeneca vaccine. Laboratory values are available. On an unknown date patient had CT Scan results confirmed blood clot.

The outcome of the event(s) of pains was unknown. The patient died from the event of seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever on an unspecified date.

It is not known whether an autopsy was performed. The cause of death was seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever.

The following events were considered serious due to death: seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever. The following events were considered serious due to important medical event: seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever. The following events were considered non-serious: pains.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

for regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The AstraZeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. Product authorized under the interim order.

Summary of follow-up information received by AstraZeneca on 14-MAY-2021 via consumer originating from spontaneous source: New reporter added. Pains and seizure were added as event.

Summary of follow-up information received by AstraZeneca 18-MAY-2021: New reporter added. Events Pains and seizure were added, CT SCAN confirmed a blood clot added from the narrative to the events tab.

Summary of follow-up information received by AstraZeneca 21-JUN-2021: A spontaneous report had been received from a consumer, following information updated: New reporters were added.

Summary of follow-up of insignificant information received by AstraZeneca on 06-JUL-2021: A spontaneous report had been received from a consumer, following information updated: New reporters were added.

Summary of follow-up information received by AstraZeneca on 06-SEP-2021 from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer originating from spontaneous source: Two reporters were added included Regulatory authority and Reference reporter. The serious criteria of events fatal bleed in her brain (PT: Cerebral haemorrhage), chills, fatigue, headache, vaccine-induced immune thrombotic thrombocytopenia (VITT) (PT: Immune thrombocytopenia) and nausea were updated. Outcome of the events chills, fatigue, headache and nausea were updated to fatal. Events of chills, headache, nausea, and fatigue were added as cause of death. Narrative was updated accordingly. Corrected report on 09-SEP-2021: Lab was recoded as CT scan, and result was corrected. Narrative was updated accordingly.

Corrected Report 13-SEP-2021: Case opened for corrections in CCC.

Summary of follow up information received by AstraZeneca 06-SEP-2021 received via a consumer: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer, Events immune thrombocytopenia and cerebral hemorrhage were added, event fatal bleed in her brain was coded to hemorrhage brain, and pains was coded to pain as per company physician.

Summary of follow up information received by AstraZeneca 21-NOV-2021 received via a consumer: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer, added events Thrombosis, pain in extremity. Changed event as reported from CT scan confirmed a blood clot to Thrombosis. Seriousness of the events was updated for events immune thrombotic thrombocytopenia (vitt), seizure, fatal bleed in her brain, fatigue, nausea, headache, chills, thrombosis. and fever as death and important medical event. Updated narrative.

Summary of follow up information received by AstraZeneca 01-FEB-2022: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. The events immune thrombocytopenia and cerebral haemorrhage were deleted and recoded the event VACCINE INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) to LLT: Thrombosis with thrombocytopenia syndrome. Narrative was updated.

CAUSE OF DEATH: SEIZURE CAUSE OF DEATH: VACCINE INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) CAUSE OF DEATH: PAIN IN EXTREMITY CAUSE OF DEATH: THROMBOSIS CAUSE OF DEATH: THROMBOSIS. CAUSE OF DEATH: CHILLS CAUSE OF DEATH: FATIGUE CAUSE OF DEATH: HEADACHE CAUSE OF DEATH: NAUSEA CAUSE OF DEATH: FATAL BLEED IN HER BRAIN CAUSE OF DEATH: FEVER Lab Test #1 : 10011603
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of Seizure and Cerebral hemorrhage are not listed in the company core data sheet of AZD1222. Headache, Fatigue, Chills, Pyrexia, Pain in extremity and Nausea is listed in company core data sheet of AZD1222. However, since the events were reported with a fatal outcome, it is considered unlisted. Thrombosis (preferred term: Thrombosis and preferred term: Thrombosis) in combination with Thrombocytopenia (preferred term: Thrombosis with thrombocytopenia syndrom) is listed in the company core data sheet of AZD1222. However, as the events were reported with the seriousness criteria of death, it is considered unlisted. Cerebral hemorrhage, Seizure and Headache could be in association with each other. Cerebral hemorrhage could further be in association with the combination of thrombosis and thrombocytopenia. Due to limited information on baseline health condition before vaccination, relevant family and medical history (head trauma, stroke, cardiovascular disease, hypertension, bblood vessel abnormalities, brain tumor, deep venous thrombosis, neoplastic disease, thrombophilia), concurrent conditions (metabolic or infectious diseases, head trauma, atherosclerosis), concomitant medications, further clarification of the events, clinical course, treatment and interventions, risk factor (smoking, alcohol or illicit drugs intake), detailed etiological and diagnostic workup (physical examination, neurological evaluation, complete blood profile including coagulation panel, complete report of computerized tomography performed, electroencephalogram, lumbar puncture with cerebrospinal fluid analysis, D dimer test, cardiac assessment, echocardiogram, other relevant imaging studies, complete autopsy report), the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Case level outcome :Fatal

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY). The report concerns a female patient of Unknown ethnic origin (age 52 years).

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN), via intramuscular route, for product used for unknown indication on [redacted]021.

On an unknown date, the patient experienced seizure (preferred term: Seizure). On an unknown date, the patient experienced vaccine induced immune thrombotic thrombocytopenia (vitt) (preferred term: Thrombosis with thrombocytopenia syndrome). On an unknown date, the patient experienced pain in extremity (preferred term: Pain in extremity). On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis). On an unknown date, the patient experienced thrombosis. (preferred term: Thrombosis). On an unknown date, the patient experienced chills (preferred term: Chills). On an unknown date, the patient experienced fatigue (preferred term: Fatigue). On an unknown date, the patient experienced headache (preferred term: Headache). On an unknown date, the patient experienced nausea (preferred term: Nausea). On an unknown date, the patient experienced fatal bleed in her brain (preferred term: Cerebral haemorrhage). On an unknown date, the patient experienced fever (preferred term: Pyrexia). On an unknown date, the patient experienced pains (preferred term: Pain). It was reported immune thrombocytopenia and Cerebral haemorrhage. Woman in her 50s was died from a rare blood clot condition after receiving the AstraZeneca-Oxford vaccine and reporter stated that woman was only the second confirmed case of vaccine-induced immune thrombotic thrombocytopenia (VIIT) in the province. Reporter confirms first death linked to AstraZeneca vaccine. The Canadian province reporter reported its first death of a patient from a rare blood clot condition after receiving the AstraZeneca (AZN.L) COVID-19 vaccine, its chief medical officer said. It stated her mom was suffering from fatigue, strong nausea, headache, fever and chills. The symptoms were continuing to get worse a full week after she received her first shot. Patient was died from a rare blood clot condition after receiving the AstraZeneca-Oxford vaccine. It stated her mother was turned away at the emergency room of Hospital last Thursday as her symptoms worsened. The next day the otherwise healthy woman suffered a fatal bleed in her brain. Patient had aches and pains after she received her first dose of the Oxford-AstraZeneca vaccine, but after about a week, things took a turn. She developed a headache that quickly got worse, so bad that her 19 years old daughter insisted they head to the emergency department to get it checked out. They said there was nothing they can do for me. Take some Tylenol, and go to bed and by the next morning, patient was in so much pain she could not get out of bed, she was taken to another hospital, where a CT scan confirmed a blood clot, and she was rushed to the hospital but suffered a seizure on the way. She died three days later, becoming one of three people in Canada who have died from extremely rare but serious blood clots linked to the AstraZeneca vaccine. Laboratory values are available. On an unknown date patient had CT Scan results confirmed blood clot.

The outcome of the event(s) of pains was unknown. The patient died from the event of seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever on an unspecified date.

DRAFT

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Continuation Sheet for CIOMS report **Mfr. Control No. :CA-AstraZeneca-2021A407153**

It is not known whether an autopsy was performed. The cause of death was seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever.

The following events were considered serious due to death: seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever. The following events were considered serious due to important medical event: seizure, vaccine induced immune thrombotic thrombocytopenia (vitt), pain in extremity, thrombosis, thrombosis., chills, fatigue, headache, nausea, fatal bleed in her brain and fever. The following events were considered non-serious: pains.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The AstraZeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. Product authorized under the interim order.

Summary of follow-up information received by AstraZeneca on 14-MAY-2021 via consumer originating from spontaneous source: New reporter added. Pains and seizure were added as event.

Summary of follow-up information received by AstraZeneca 18-MAY-2021: New reporter added. Events Pains and seizure were added, CT SCAN confirmed a blood clot added from the narrative to the events tab.

Summary of follow-up information received by AstraZeneca 21-JUN-2021: A spontaneous report had been received from a consumer, following information updated: New reporters were added.

Summary of follow-up of insignificant information received by AstraZeneca on 06-JUL-2021: A spontaneous report had been received from a consumer, following information updated: New reporters were added.

Summary of follow-up information received by AstraZeneca on 06-SEP-2021 from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer originating from spontaneous source: Two reporters were added included Regulatory authority and Reference reporter. The serious criteria of events fatal bleed in her brain (PT: Cerebral haemorrhage), chills, fatigue, headache, vaccine-induced immune thrombotic thrombocytopenia (VITT) (PT: Immune thrombocytopenia) and nausea were updated. Outcome of the events chills, fatigue, headache and nausea were updated to fatal. Events of chills, headache, nausea, and fatigue were added as cause of death. Narrative was updated accordingly. Corrected report on 09-SEP-2021: Lab was recoded as CT scan, and result was corrected. Narrative was updated accordingly.

Corrected Report 13-SEP-2021: Case opened for corrections in CCC.

Summary of follow up information received by AstraZeneca 06-SEP-2021 received via a consumer: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer, Events immune thrombocytopenia and cerebral hemorrhage were added, event fatal bleed in her brain was coded to hemorrhage brain, and pains was coded to pain as per company physician.

Summary of follow up information received by AstraZeneca 21-NOV-2021 received via a consumer: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer, added events Thrombosis, pain in extremity. Changed event as reported from CT scan confirmed a blood clot to Thrombosis. Seriousness of the events was updated for events immune thrombotic thrombocytopenia (vitt), seizure, fatal bleed in her brain, fatigue, nausea, headache, chills, thrombosis. and fever as death and important medical event. Updated narrative.

Summary of follow up information received by AstraZeneca 01-FEB-2022: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. The events immune thrombocytopenia and cerebral haemorrhage were deleted and recoded the event VACCINE INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) to LLT: Thrombosis with thrombocytopenia syndrome. Narrative was updated.

CAUSE OF DEATH: SEIZURE CAUSE OF DEATH: VACCINE INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) CAUSE OF DEATH: PAIN IN EXTREMITY CAUSE OF DEATH: THROMBOSIS CAUSE OF DEATH: THROMBOSIS. CAUSE OF DEATH: CHILLS CAUSE OF DEATH: FATIGUE CAUSE OF DEATH: HEADACHE CAUSE OF DEATH: NAUSEA CAUSE OF DEATH: FATAL BLEED IN HER BRAIN CAUSE OF DEATH: FEVER Lab Test #1 : 10011603
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Company Remarks (Sender's comments) (Cont...)

Thrombosis with thrombocytopenia syndrom) is listed in the company core data sheet of AZD1222. However, as the events were reported with the seriousness criteria of death, it is considered unlisted. Cerebral hemorrhage, Seizure and Headache could be in association with each other. Cerebral hemorrhage could further be in association with the combination of thrombosis and thrombocytopenia. Due to limited information on baseline health condition before vaccination, relevant family and medical history (head trauma, stroke, cardiovascular disease, hypertension, blood vessel abnormalities, brain tumor, deep venous thrombosis, neoplastic disease, thrombophilia), concurrent conditions (metabolic or infectious diseases, head trauma, atherosclerosis), concomitant medications, further clarification of the events, clinical course, treatment and interventions, risk factor (smoking, alcohol or illicit drugs intake), detailed etiological and diagnostic workup (physical examination, neurological evaluation, complete blood profile including coagulation panel, complete report of computerized tomography performed, electroencephalogram, lumbar puncture with cerebrospinal fluid analysis, D dimer test, cardiac assessment, echocardiogram, other relevant imaging studies, complete autopsy report), the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable physician through a Pfizer sales representative. A 72-year old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, batch/lot number unknown) on an [redacted]2021 as 1ST DOSE, SINGLE for COVID-19 immunization (Age at vaccination: 72 years). Medical history included blood pressure (controlled with medication), sleep apnea (compliant with her CPAP), Renal Chronic Disease (Creatinine was well maintained at 135), depression, hypercholesterolemia, high cholesterol and Atherosclerosis. Concomitant medications included sertraline hydrochloride (ZOLOFT) taken for depression; atorvastatin (LIPITOR) taken for hypercholesterolemia. On [redacted]021, the reporter stated that the patient passed away from a Myocardial Infarct on [redacted]2021 at 12:16AM. She had been stable for a very long time. Her sugar blood level was perfect. Reporter confirmed that on the morning of the [redacted]2021, patient had a bad headache but nothing too worrying, with no other symptoms. Patient had pain at injection site after receiving the vaccine on [redacted]2021, but had recovered. CPR was done on patient but reporter did not know if patient was already dead when the ambulance arrived. Outcome of the event myocardial infarction was fatal while outcome of the event vaccination site pain was recovered on an unspecified date. Outcome of the event headache was unknown. The patient died on [redacted]2021 from a Myocardial Infarct. It was not reported if an autopsy was performed.

Information on the batch number has been requested.

Follow-up [redacted]2021): New information from the same contactable physician as part of follow-up activities performed by the DSU included: patient's age, age at vaccination, start date, stop date, medical history, concomitant medications, reaction data (events: myocardial infarction, vaccination site pain and headache), event onset, laboratory data, outcome of the event and death details.

No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Follow-up [redacted]021): This is a follow-up report to notify that the case AER 2021523184 and AER 2021523170 are duplicates. All subsequent follow-up information will be reported under manufacturer report number AER 2021523184. The new information reported from a contactable physician included: added medical history.

No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Amendment: This follow-up report was submitted to amend previously reported information: patient gender was updated to female.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Event myocardial infarction represents an intercurrent medical condition and unrelated to bnt162b2. The underlying disease may provide an alternative cause.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable physician.

A 58-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular (at the age of 58-years-old), administered in Arm Right on [redacted]2021 (Lot Number: Unknown) as 1st dose, single for COVID-19 immunization. Medical history included s / p ruptured aneurysm, vascular dementia, old MCAS infarction (as reported), Heart failure (LVEF 23%), atherosclerotic heart disease old infarction (subclavian and carotid), diffuse MVAS (subclavian and carotid, as reported), and diabetes. Concomitant medications included zopiclone, sitagliptin phosphate (JANUVIA [SITAGLIPTIN PHOSPHATE]), cyanocobalamin, metformin, gliclazide, atorvastatin, aspirin, calcium carbonate, vitamin D: all taken for an unspecified indication, start and stop dates were not reported. The 58-year-old patient very ill (s / p ruptured aneurysm, vascular dementia, atherosclerotic heart disease old infarction, cardiac insufficiency (left ventricular Ejection Fraction LVEF 23%), diffuse atherosclerotic vascular disease (subclavian and carotid), diabetes) who received her 1st dose on [redacted] and was found dead in her bed on [redacted]021. Her body was found in her bed, semi sitting on the edge of the bed and body thrown backwards, suggesting sudden death. The family kept the reporter informed 1 week later and no autopsy was done. The patient died on [redacted]2021. An autopsy was not performed.

Facility where the most recent COVID-19 vaccine was administered was in a Nursing Home/Senior Living Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19.

Information on the lot/batch number has been requested.

Follow-up (16Jun2021): This follow-up is being submitted to notify that the batch/lot number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Death of unknown cause is assessed related as a cautionary measure and for reporting purposes. The underlying disease may provide an alternative cause.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
The follow-up information received does not alter the previous company clinical evaluation.

Canada Vigilance Adverse Reaction Report	HC Latest Received Date:	20210823 CCYYMMDD
	HC Initial Received Date:	2021 CCYY

Safety Report (A.1)

Safety report I.D. (Ver.) (A.1.0.1)

CA-PFIZER INC-2021547048(5)

Primary source country (A.1.1)	Occur country (A.1.2)	Serious? (A.1.5.1)	Serious
Canada		Seriousness (A.1.5.2)	
Type of report		Caused/prolonged hospitalization?	Yes
Spontaneous		Results in death?	Yes
MAH/Sponsor Initial Received Date (A.1.6)	MAH/Sponsor Latest Received Date (A.1.7)	Disabling/Incapacitating?	No
2021[redacted] CCYYMMDD	20210816 CCYYMMDD	Life threatening?	Yes
Additional documents? (A.1.8.1)		Congenital anomaly/birth defect?	No
No		Other medically important condition?	No

List of documents held by sender (A.1.8.2)

Fulfill expedited criteria? (A.1.9)	Regulatory authority's number (A.1.10.1)
Yes	
	Company number (A.1.10.2)
	CA-PFIZER INC-2021547048

Other case identifiers in previous transmission? (A.1.11)

Yes

Duplicate Source(s) (A.1.11.1)	Duplicate Case identifiers (A.1.11.2)
PFIZERINC	CA-PFIZER INC-2021547048

Duplicate (D) / Link (L) Report number(s) (A.1.12)

()

Report nullification? (A.1.13)	Reason for nullification (A.1.13.1)
No	

Medically confirmed or from health professional? (A.1.14)

Yes

Source (A.1.4)

MAH - PFIZER

Patient (B.1)

Patient Initial (B.1.1)	Sex (B.1.5)	Patient height (B.1.4)	Patient weight (B.1.3)
PRIVACY	Female		
Date of birth (B.1.2.1)	Age group (B.1.2.3)		Onset Age (B.1.2.2)
			65 Years

Gestation Period (B.1.2.2.1)	LMP date (B.1.6)

GP medical record no. (B.1.1.1a)	Specialist record no. (B.1.1.1b)	Hospital record no. (B.1.1.1c)	Investigation no. (B.1.1.1d)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

Canada Vigilance AER#:	E2B_04166359 (4)	Page#2

Patient death (B.1.9)

Date of death (B.1.9.1)	Was autopsy done? (B.1.9.3)
2021[redacted] CCYYMMDD	Unknown

Patient death cause (B.1.9.2)

MedDRA version for cause (B.1.9.2.a)	Reported cause(s) (B.1.9.2.b)
26.0	Atrial fibrillation
26.0	Blood pressure dropped
26.0	Cardiac valve disease
26.0	Heart attack
26.0	Hemorrhagic stroke
26.0	Pulmonary edema
26.0	Septic shock
26.0	Short of breath
26.0	Vaccination site pain

Patient autopsy (B.1.9.4)

MedDRA version for autopsy-determined cause(s) of death (B.1.9.4a)	Autopsy-determined cause(s) of death (B.1.9.4b)

Drug (B.4)

Drug characterization (B.4.k.1)	Medicinal product name (B.4.k.2.1)	
Suspect	COMIRNATY PURPLE CAP VIAL (12+ YEARS) AFTER DILUTION CONTAINS 6 DOSES OF 0.3 ML	
Active Substance names (B.4.k.2.2)		
tozinameran		
Country drug obtained (B.4.k.2.3)	**Batch/lot no. (B.4.k.3)**	
Canada		
Holder and authorization/application no. of drug (B.4.k.4)		
Authorization/Application no.: 02509210 Country of authorization/application: Canada		
Structured dosage info (B.4.k.5)		
Dosage text (B.4.k.6)		
DOSE 1, SINGLE		
Pharmaceutical form (B.4.k.7)	**Route of administration (B.4.k.8)**	**Parent route of admin (B.4.k.9)**
	Intramuscular	
Gestation period (B.4.k.10)	**MedDRA version (B.4.k.11a)**	**Indication (B.4.k.11b)**
	26.0	COVID-19 immunization
Start date of drug (B.4.k.12)	**Drug end date (B.4.k.14)**	
2021[redacted] CCYYMMDD	2021[redacted] CCYYMMDD	
Start period (B.4.k.13.1)	**Last period (B.4.k.13.2)**	**Duration of drug Admin (B. 4.k.15)**

ATIA - 19(1)

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (the son) and a contactable physician. A 65-year-old female patient received bnt162b2, dose 1 via an intramuscular route of administration on [redacted]2021 (Batch/Lot number was not reported) as dose 1, single for covid-19 immunization (at the age of 65-year-old). Medical history included cerebrovascular accident (a few strokes in the past), seizure, encephalomalacia from 2018, chronic obstructive pulmonary disease from Dec2016, postural hypotension (uses Florine! as needed), fibromyalgia, neurogenic bladder, peripheral arterial disease, left internal carotid stenosis from 2016 (50-69%), pulmonary fibrosis from 2016 (patient persistently Shortness of breath cough in late 2016), peripheral neuropathy, post menopausal osteoporosis with high fracture risk (taking prilia & 20001U daily), coronary artery disease(CAD), glaucoma right eye (has had surgery), endometrial cancer (2 surgeries), bilateral cataract, blood clot (in the leg or lung?), allergy to antibiotics, is current smoker and handicapped (walker and wheel chair), onset was 10 years ago. Concomitant medications included acetylsalicylic acid (ASPIRIN 81); baclofen; bisoprolol; clonazepam; coal tar, resorcinol monoacetate (BREA); furosemide, potassium chloride (LASIX + K); metoclopramide; metronidazole benzoate (FLAGYL S); morphine; nabilone; nicotine (TRANSDERMAL SYSTEM); phenytoin (DILANTIN), pramipexole dihydrochloride (MIRAPEX), pregabalin (LYRICA CR), ramipril (ALTACE), rosuvastatin calcium (CRESTOR), sennoside a +b (SENOKOT), tiotropium bromide (SPIRIVA RESPIMAT), trazodone hydrochloride; rivaroxaban (XARELTO), levofloxacin (LOVENOX), all taken for an unspecified indication, start and stop date were not reported. Right after she received her vaccine, her arm got sore on [redacted]2021. The patient experienced acutely short of breath with pulmonary edema on [redacted]2021; blood pressure dropped, heart attack, ischemic mitral valve on, ruptured hemorrhagic stroke, atrial fibrillation and septic shock on [redacted]2021. 6-7 hours later [redacted]2021), her blood pressure started to drop. [redacted]2021 her blood pressure dropped to 60 and she was rushed into the hospital where she fell into a comma and passed away. The reporter mentioned that she was under a lot of medication but did not have the complete list at the time he reported. AE required visit to emergency room. Reporter said he will contact the pharmacy for the complete list for when we call back for F/U. All the reported events were considered serious because caused the death, hospitalized and life-threatening. Course of the event. Myocardial infarction with ischemic mitral valve, ruptured hemorrhagic stroke, atrial fibrillation and septic shock. The patient is a 65-year-old woman admitted on [redacted]2021 with a non-ST elevation MI. She was seen by Internal Medicine at 24 hours and the plan was for angiography, but she was too short of breath to lay flat for this procedure in the first few days. Around day 4, she became acutely short of breath with pulmonary edema and came to the ICU. She required BiPAP and then intubation. Echocardiogram revealed significant mitral valve regurgitation with likely ischemic injury. The patient did have a somewhat poor baseline with previous strokes and residual deficits, decreased cognition with a MOCA of 12/30 and percutaneous endoscopic gastrostomy (PEG) tube requirement for eating at home with a question of possible pulmonary fibrosis. As such, her prognosis was presented to her family as quite poor. It was not clear that her husband really understood most of what was going on. He had asked for things like a heart transplant and blood transfusions to treat this. He seemed to think that all of this was related to receiving a Pfizer vaccine, and in fact, the physician thinks the family has reached out to report this to Pfizer. The physician did review the situation with the cardiologist reading her echo, who felt this was a very clearly ischemic problem and did not seem compatible, at least for the echo findings, with myocarditis, which has been reported with that vaccine. The patient went on to have further complications including atrial fibrillation and septic shock, growing bacillus in sputum and urine. In the last 48 hours, the patient did deteriorate neurologically. There were significant changes to her pupils despite the heavy sedation she was on. we were able to get a Computerized Tomography (CT) scan showing a large hemorrhagic stroke. She continued to deteriorate and passed in the morning of [redacted]2021. Her husband was made well aware of all of these issues and was able to see her. The physician thought he simply had a hard time coping with the loss of his wife, which is very much understandable. The patient underwent lab tests and procedures which included alanine aminotransferase normal: 46 on [redacted]2021, blood bicarbonate: 20 on [redacted]2021, blood creatinine: 57 on [redacted]2021 and [redacted]2021, blood potassium: 3.4 on [redacted]021, 3.4 on [redacted]2021 and 0.9 on [redacted]2021, blood pressure measurement: dropped and 130/90 on [redacted]2021, blood sodium: 137 on [redacted]2021, blood urea: 4 on [redacted]2021, electrocardiogram: no st elevation inferiorly on [redacted]2021 and [redacted]2021, electrocardiogram: there is some inferior st elevation now on [redacted]2021, haemoglobin: 156 on [redacted]2021 and [redacted]2021, pulse: 140 (her pulse was sinus tachycardic), 120 (after a dose of metoprolol) on [redacted]2021 and 140 and 70 on [redacted]2021, gamma-glutamyl transferase: 205 on [redacted]2021, MoCA: 12/30 on [redacted]2021, Positive end expiratory pressure (PEEP): 8 and 12 on [redacted]2021, Mean cell volume: 100 on [redacted]2021, platelet count: 403 on [redacted]2021 and [redacted]2021, fever: 37.8 on [redacted]2021, respiratory rate: 30 on [redacted]2021 (after a dose of metoprolol), SARS-CoV-2 test: Negative on [redacted]2021, troponin: packed at 1.8 on [redacted]2021, white blood cell count: 403 on [redacted]2021 and 20 on [redacted]2021 and X-rays: bilateral infiltrates on [redacted]2021. The patient died on [redacted]2021. It was unknown if the autopsy was performed. The clinical outcome for the events was fatal.

Follow-up [redacted]2021 and [redacted]2021): New information was received from the same contactable consumer (patient's son): event heart attack was added, event details and clinical course added.

Follow-up [redacted]2021): The following information was received from a contactable physician via fax: new adverse events causing patient's death, medical history concomitant medications course of the event.
The report is now medically confirmed.

Follow up information has been requested. Information about lot number has been requested.

Follow-up (13-JUL-2021): the following information was received from the same contactable consumer (patient's husband) that included: updated death date, adverse event, route of administration, medical history and clinical course.

Follow-up (16Aug2021): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Sender's comments (B.5.4)

Based on the information provided by the reporter, it appears unlikely that subject vaccine contributed to the myocardial infarction and other events. The reported events likely represent intercurrent medical conditions in this elderly patient. There is limited information provided in this report. This case will be reassessed upon receipt of follow-up information.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a male patient of Unknown ethnic origin (age 40 years).

No medical history was reported. No concomitant products were reported.

The patient received AstraZeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadox1 ncov-19)) 0.5 ml, via intramuscular route, for covid-19 immunisation on an unknown date.

On [redacted]2021, the patient experienced cerebral haemorrhage (preferred term: Cerebral haemorrhage).

The action taken for AstraZeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable.

The patient died from the event of cerebral haemorrhage on an unspecified date.It is not known whether an autopsy was performed. The cause of death was cerebral haemorrhage.

The outcome of the event cerebral haemorrhage was died.

The following event was considered serious due to death and important medical event: cerebral haemorrhage.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of Significant follow-up information received by AstraZeneca/Medimmune date-25-MAY-2021 via Consumer from spontaneous: and In the follow-up Seriousness criteria Dead was added. Age of the patient was added.

Follow-up of insignificant information received by AstraZeneca/Medimmune on 02-JUN-2021 (received via database reconciliation) via consumer: A spontaneous report was received from a consumer. No new information was updated.

Summary of follow-up information received by AstraZeneca on 11-OCT-2021 via consumer: New reporter regulatory authority was added, Other reporter is replaced with Reference reporter, Dose as used was added, Route of administration was updated, Indication was updated, Disease was updated, ethnic origin was updated to unknown, event verbatim BRAIN HEMORRHAGE was updated to CEREBRAL HAEMORRHAGE, event onset date was removed. Corrected report 25-OCT-2021: Batch number captured as unknown was removed and kept as blank.

Summary of follow-up information received by AstraZeneca on 21-Nov-2021: A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer : additional reporter as other was added, event onset date as 10-MAY-2021 was added for event cerebral haemorrhage and narrative was updated.CAUSE OF DEATH: CEREBRAL HAEMORRHAGE
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Cerebral hemorrhage is not listed in the company core sheet for AZD1222. Due to limited information on baseline health condition before the vaccination, exact onset date of vaccination, clinical course of the event, concurrent diseases (such as hypertension, diabetes mellitus, infections, coagulation disorders), relevant medical and family history, concomitant medications (aspirin, anticoagulant, thrombolytic), risk factors (cocaine, amphetamine, smoking, alcohol abuse), and details and diagnostic and etiological workup (brain magnetic resonance imaging, angiogram and complete laboratory workup including coagulation panels from baseline, complete autopsy report), the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a patient of unknown gender (age not provided) of Unknown ethnic origin.

No medical history and no concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number), dose unknown via intramuscular route, for product used for unknown indication on an unknown date. On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia).

Action taken with suspect product Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. Officials reported that person was being treated in hospital. The patient died from the event on an unspecified date. It was not known whether an autopsy was performed. The cause of death was thrombocytopenia.

The event thrombocytopenia was considered serious due to seriousness criteria of death and important medical event.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of insignificant follow-up information received by AstraZeneca received on 25-MAY-2021:A spontaneous report has received via consumer. New information included the addition of another consumer.

Summary of follow up information received by Astrazeneca on 21-NOV-2021. A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. Significant information included the Regulatory authority reporter type was added. Suspect product indication was added. Event verbatim updated. Narrative added and updated. Corrected report 24-NOV-2021: Action taken was changed to not applicable.

Corrected report on 04-Jan-2022: The case was suppressed as No patient identifier were available (Non-Valid).CAUSE OF DEATH: THROMBOCYTOPENIA NULLIFICATION/AMENDMENT REASON: Amendment: Non-Valid
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of Thrombocytopenia is not listed in the company core data sheet of AZD1222. The cause of death was thrombocytopenia. Due to limited information on the relevant medical history, concurrent diseases, concomitant medication, autopsy details, pre-disposing risk factors (smoking, alcohol use, immune-related conditions), exposure to specific factors, detailed diagnostic (computerized tomography scan, pulmonary angiography, complete blood count, Bone marrow scan, prothrombin time, partial thromboplastin time , venous ultrasound, contrast venography, and blood test, D-dimer test, ophthalmological work up) and etiologic workup, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

This case was initially received via Pfizer Inc (Reference number: 2021498435) on 20-May-2021. The most recent information was received on 25-Nov-2021 and was forwarded to BMS on 25-Nov-2021.
This spontaneous case was reported by a physician and describes the occurrence of fatal HAEMORRHAGIC STROKE (Stroke; Cerebral bleeding/Hemorrhagic CVA), fatal CRANIOCEREBRAL INJURY, fatal FALL, fatal SUBARACHNOID HAEMORRHAGE, fatal SUBDURAL HAEMORRHAGE, fatal CHILLS, fatal PYREXIA and fatal VOMITING in 91-year-old female patient who received apixaban (Eliquis) film-coated tablet for Cerebrovascular accident prophylaxis.

CO-SUSPECT PRODUCTS included Bnt162b2 for COVID-19 immunization and Atenolol tablet for Atrial fibrillation.

The patient's past medical history included CVA on 26-Apr-2017, TIA (Recurrent TIA in 2011) in 2011 and Coronary artery disease in 2013.
Concurrent medical conditions included AFib.

On an unknown date, the patient started Eliquis (Oral), 5 milligram twice a day, Bnt162b2 (unknown route) at an unspecified dose Total and Atenolol (Oral), 50 milligram once a day. On an unknown date, the patient experienced HAEMORRHAGIC STROKE (seriousness criteria death, hospitalization and medically significant), CRANIOCEREBRAL INJURY (seriousness criteria death and medically significant), FALL (seriousness criteria death and medically significant), SUBARACHNOID HAEMORRHAGE (seriousness criteria death and medically significant), SUBDURAL HAEMORRHAGE (seriousness criteria death and medically significant), CHILLS (seriousness criteria death, hospitalization and medically significant), PYREXIA (seriousness criteria death, hospitalization and medically significant) and VOMITING (seriousness criteria death, hospitalization and medically significant). The patient was hospitalized on 25-Apr-2021 due to Haemorrhagic stroke. The action taken with Eliquis(Oral) was unknown. The patient died on 25-Apr-2021. The reported cause of death was hemorrhagic cva, Craniocerebral injury, Fall, Subarachnoid haemorrhage, Subdural haemorrhage, Chills, Pyrexia and Vomiting. It is unknown if an autopsy was performed. Apixaban was used for Afib. The patient received co-suspect drug BNT162B2 vial contains 6 doses of 0.3 ml after dilution in intramuscular suspension at a frequency of total with therapy duration of 1 day. The patient received atenolol in tablet dosage form.

Patient was admitted and treated in the hospital. Patient was admitted to hospital on [redacted]2021 and died of hemorrhagic CVA.

Action taken with suspect therapies in response to events were not reported.

For Eliquis(Oral), the reporter did not provide any causality assessments.
Case received from Canada health authority: CA-HEALTHCANVIG-000946849
Correction to this file was done on 28-May-2021, based on the information previously received on 20-MAY-2021 following change was made: BNT162B2 was coded as co-suspect product in the product tab (previously coded as Covid-19 Vaccine).

Most recent follow-up information received from consumer via Canada HA on 05-Jul-2021 incorporated above includes: Added new events.

Most recent follow-up information received from the other health professional via Canada Health Authority (CA-HEALTHCANVIG-E2B_04149686) incorporated above includes: 07-SEP-2021 Suspect product, product attributes and New events added. Atenolol was considered as additional suspect. Events Chills, Pyrexia and Vomiting were added additionally.

Most recent follow-up information received from other health professional via Canada HA on 25-Nov-2021 incorporated above includes: suspect product details, event attributes and narrative updated.

Further company follow-up with the Physician is not possible.

BMS medical evaluation comment:
This 91-year-old patient died due to fall, craniocerebral injury, subarachnoid haemorrhage, subdural haemorrhage, hemorrhagic stroke, pyrexia, chills and vomiting after receiving apixaban therapy. Based on the elderly age and nature of the reported events fall leading to craniocerebral injury is considered not related to suspect therapy. Although fall contributed, considering the anticoagulant nature of suspect therapy, its causal role in the reported fatal bleeding events hemorrhagic stroke, subdural hemorrhage and subarachnoid hemorrhage is considered possible. Pyrexia, chills and vomiting are likely manifestations secondary to fatal bleeding events.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

BMS medical evaluation comment:
This 91-year-old patient died due to fall, craniocerebral injury, subarachnoid haemorrhage, subdural haemorrhage, hemorrhagic stroke, pyrexia, chills and vomiting after receiving apixaban therapy. Based on the elderly age and nature of the reported events fall leading to craniocerebral injury is considered not related to suspect therapy. Although fall contributed, considering the anticoagulant nature of suspect therapy, its causal role in the reported fatal bleeding events hemorrhagic stroke, subdural hemorrhage and subarachnoid hemorrhage is considered possible. Pyrexia, chills and vomiting are likely manifestations secondary to fatal bleeding events.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer. The report concerns an adult of unknown gender of Unknown ethnic origin.

No medical history was reported.

No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN) 0.5 ml, via intramuscular route, on an unknown date.

On an unknown date, the patient experienced vaccine-induced thrombotic thrombocytopenia/low platelets (preferred term: Thrombocytopenia). On an unknown date, the patient experienced vaccine-induced thrombotic thrombocytopenia (preferred term: Thrombosis).

It is unknown if any action was taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)).

The patient died from the event of vaccine-induced thrombotic thrombocytopenia/low platelets and vaccine-induced thrombotic thrombocytopenia on an unspecified date.

It is not known whether an autopsy was performed. The cause of death was low platelets, vaccine-induced thrombotic thrombocytopenia and vaccine-induced thrombotic thrombocytopenia.

The events were considered serious (death, hospitalised and important medical event).

Follow-up of insignificant information received by AstraZeneca on 18-MAY-2021 via consumer.Two new reporters were added and Narrative was updated .CAUSE OF DEATH: LOW PLATELETS CAUSE OF DEATH: VACCINE-INDUCED THROMBOTIC THROMBOCYTOPENIA CAUSE OF DEATH: VACCINE-INDUCED THROMBOTIC THROMBOCYTOPENIA
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal Thrombocytopenia and Thrombosis are not listed in the company core data sheet of AZD1222. Due to limited information on age, gender, health status and blood counts at baseline, circumstances leading to the events, date for vaccination, onset date, relevant medical history including habits such as smoking and alcohol consumption, concomitant medication, etiologic and diagnostic work up and autopsy report, If performed, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (HEALTH CANADA) via consumer. The report concerned a patient of unknown gender of Unknown ethnic origin of age 6 decades.

No medical history and no concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for product used for unknown indication on [redacted]2021. Seventeen days later, the patient experienced developed blood clot symptoms (preferred term: Thrombosis). On an unknown date, the patient experienced death caused by vaccine induced immune thrombotic thrombocytopenia (vitt) (preferred term: Thrombocytopenia). On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia). On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis). The patient went to hospital 17 days later after receiving vaccine. They were previously reported as hospitalized.

The action taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. Treatment included hospitalization of patient. The patient died from the events of death caused by vaccine induced immune thrombotic thrombocytopenia (vitt), developed blood clot symptoms, thrombocytopenia and thrombosis on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was developed blood clot symptoms, death caused by vaccine-induced immune thrombotic thrombocytopenia (vitt), thrombocytopenia and thrombosis.

The events death caused by vaccine induced immune thrombotic thrombocytopenia (vitt), developed blood clot symptoms, thrombocytopenia and thrombosis were considered serious due to death. The events death caused by vaccine induced immune thrombotic thrombocytopenia (vitt), developed blood clot symptoms, thrombocytopenia and thrombosis were considered serious due to hospitalised. The events death caused by vaccine induced immune thrombotic thrombocytopenia (vitt), thrombocytopenia and thrombosis were considered serious due to important medical event.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow up information received by AstraZeneca on 11-OCT-2021 from the health authority via consumer. New reporter of regulatory authority and regulatory identification number were added. New events of thrombocytopenia and thrombosis were added. Death tab was updated. Narrative was updated. Minor correction 25-OCT-2021: Seriousness criteria of important medical event for the event developed blood clot symptoms was deleted and suspect indication was added. Associated case ID added.

Summary of follow-up information received by AstraZeneca on 21-NOV-2021. The following information was updated. Meddra version was updated for Thrombocytopenia and Thrombosis. Dosage form was updated. As per the MA comment the event of THROMBOCYTOPENIA was coded to LLT: Thrombocytopenia and DEATH CAUSED BY VACCINE INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) was coded to LLT: Thrombosis with thrombocytopenia syndrome. Minor correction 23-NOV-2021: Last name of RA was corrected, Disease continues was changed to unknown for Product used for unknown indication, age at onset was added, narrative was corrected.
CAUSE OF DEATH: DEVELOPED BLOOD CLOT SYMPTOMS CAUSE OF DEATH: DEATH CAUSED BY VACCINE-INDUCED IMMUNE THROMBOTIC THROMBOCYTOPENIA (VITT) CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: THROMBOSIS
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Thrombosis with thrombocytopenia syndrome is listed in company core data sheet of AZD1222. However, since the event was reported with a fatal outcome, it is considered unlisted. Due to limited information regarding relevant medical history (deep venous thrombosis, traumatic injury, neoplastic disease, thrombophilia, aplastic anemia, cirrhosis, leukemia, myelodysplasia, autoimmune disorder), family history of venous thromboembolism, concurrent conditions (such as chronic obstructive pulmonary disease, congestive heart failure, infections), clinical course, etiological and diagnostic work up (complete physical examination, complete blood count with D dimer test and infectious profile, electrocardiogram, chest x-ray, ultrasonography, echocardiography, other relevant imaging studies), treatment details, further clarification of the event, concomitant medication, risk factors (prolonged immobilization, smoking), and complete autopsy report, the evaluation did not find evidence to suggest aa causal relationship between the event and AZD 1222.

Chère [redacted]

Nous vous remercions d'avoir communiqué des renseignements sur des effets indésirables à Santé Canada, le 5 Avril 2021, concernant le produit de santé Vaccin Moderna. Nous désirons vous présenter nos plus profondes sympathies pour votre perte et comprenons que ceci doit être une situation difficile pour vous. Nous sommes reconnaissants du temps que vous avez pris pour nous faire part de cette tragédie et espérons que nous saurons répondre à vos préoccupations.

Le Programme Canada Vigilance est le programme de surveillance après la mise en marché de Santé Canada qui recueille et évalue les déclarations d'effets indésirables soupçonnés associés aux produits de santé qui ont été soumises par des détenteurs d'une autorisation de mise en marché (c.-à-d. des fabricants) et des hôpitaux ou par des professionnels de la santé et des consommateurs, soit directement à Santé Canada, soit par l'entremise des fabricants ou des hôpitaux.

L'information que vous avez fournie dans votre déclaration a été enregistrée dans la base de données du Programme Canada Vigilance sous le numéro d'effet indésirable **945271**. En raison de ces activités de surveillance, Santé Canada souhaite obtenir des renseignements supplémentaires au sujet de cet incident, particulièrement les renseignements suivants s'ils vous sont disponibles et/ou accessibles :

- Le numéro de lot du vaccin
- La date que le produit a été administré
- Les dates en lien avec les effets secondaires
- L'âge de votre père
- Les antécédents médicaux de votre père
- Les médicaments pris par votre père
- Les résultats de laboratoires et/ou investigations en lien avec l'infection pulmonaire
- Les traitements reçus

Nous vous invitons donc à fournir les renseignements supplémentaires mentionnés ci-haut en utilisant l'application de déclaration en ligne disponible pour déclarer un effet secondaire. S'il vous plaît, assurez-vous de sélectionner « suivi » sous *Type de déclaration* et d'indiquer votre numéro d'effet indésirable (**945271**) sous le *Numéro de référence de Santé Canada* :

ATIA - 19(1)

Toute personne qui est témoin d'une réaction possible à un vaccin ou qui a une telle réaction est invitée à la signaler à son fournisseur de soins de santé. Les fournisseurs de soins de santé déclarent les effets secondaires possibles suivant l'immunisation au bureau local de santé publique qui, à son tour, les signale à l'Agence de la santé publique du Canada par l'intermédiaire des autorités fédérales, provinciales ou territoriales en matière d'immunisation.

Pour votre information, la déclaration en ligne au Programme Canada Vigilance de Santé Canada concernant les effets secondaires des vaccins a été mise à jour. Les révisions clarifient les procédures établies et facilitent la déclaration des effets secondaires des vaccins, y compris ceux contre la COVID-19.

D'autres renseignements concernant les lignes directrices sur la déclaration des effets secondaires des vaccins pour les consommateurs sont disponibles à la page Web Déclarer un effet secondaire à un vaccin : déclarant en sélectionnant « Consommateur » comme déclarant.

Si vous désirez être tenue au courant des communications de Santé Canada au sujet des avis, retraits et autres communications sur les produits de santé, vous pouvez vous inscrire à MedEffet.

Une fois de plus, nous aimerions vous exprimer nos sincères condoléances et vous souhaitons le meilleur. N'hésitez pas à contacter le Programme Canada Vigilance si vous nécessitez de plus amples informations.

Sincèrement,

Canada Vigilance Program

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a male patient of Unknown ethnic origin (age 5 decades).

No medical history and no concomitant products were reported.

The patient received dose 1 Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadoxl ncov-19)), via intramuscular route, on an unknown date.
On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia). On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis). Patient reported its first death linked to a rare blood clot associated with the Oxford-AstraZeneca vaccine as many who received a first dose of the vaccine faced challenges trying to schedule second shots. The reporter said that there had been 13 cases of VITT in the province so far. The patient death was the fifth fatal case of VITT in an AstraZeneca recipient in Canada. Experts maintain the syndrome was exceedingly rare and treatable in most cases. The government had reported the first fatal case of an extremely rare blood clot that had been detected in a small number of residents who received the AstraZeneca/COVISHEILD COVID-19 Vaccine. It was one of 41 deaths linked to COVID-19. The health professional said that, a man in his 40s who received a first dose of the AstraZeneca vaccine at the end of April passed away a few weeks later. The death was still being investigated and it was said that the man had vaccine induced immune thrombotic thrombocytopenia, also known as VITT. While the investigation was ongoing and a final cause of death had yet to be officially determined, it had been confirmed the first death of a person with a rare blood clot who received a dose of the AstraZeneca COVID-19 vaccine in April was associated with VITT (vaccine induced immune thrombotic thrombocytopenia). The risks associated with this vaccine are rare, but they are real, she added. Reporter had total of 16 cases of thrombotic thrombocytopenia, of which 13 cases now meet the criteria for VITT. No other details regarding the deceased person had been released.

The action taken for Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable with respect to all the events. The patient died from the event of thrombocytopenia and thrombosis on an unspecified date.

The cause of death was thrombocytopenia and thrombosis. It was not known whether an autopsy was performed.

The events of thrombocytopenia and thrombosis were considered as serious due to seriousness criteria death and important medical event .

Summary of follow-up information received by AstraZeneca on 11-Oct-2021.A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer,the reporter regulatory authority was added. The event verbatims was updated from vaccine-induced thrombotic thrombocytopenia (VITT) to thrombocytopenia and thrombotic to thrombosis. New reference added. Minor correction 14-Oct-2021: Age group Adult was removed and age at onset 5 decades added.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: THROMBOSIS
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Thrombosis(reported as Thrombosis) in combination with Thrombocytopenia(reported as Thrombocytopenia) is listed in the company core data sheet of AZD 1222. However since the events were reported with a fatal outcome it is considered unlisted. The cause of death was Thrombocytopenia and Thrombosis. However due to limited information on further clarification of the event, details and circumstances surrounding the event, baseline health condition before vaccination, medical history, specific risk factors (coagulation disorders, malnutrition, dehydration, electrolyte imbalance, infections), autopsy details, etiologic and diagnostic workup (complete blood panel including infection profile, coagulation profile, electrocardiogram, echocardiogram, serum electrolytes, coagulation profile, relevant imaging studies), the evaluation did not find evidence to suggest a causal relationship between the events and vaccine.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a 61 years old male patient of Unknown ethnic origin.

The patients past and current medical history included skin cancer (metastatic malignant melanoma) excision and no concomitant products were reported.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

The patient received Dose 1 of Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number 4120Z029), via intramuscular route, for product used for unknown indication on [redacted]2021.

On an unknown date, 2 weeks after starting treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml, the patient experienced unable to ambulate (preferred term: Gait inability), weakness left or right side (preferred term: Hemiparesis), cerebellar ataxia (preferred term: Cerebellar ataxia), low strength (preferred term: Asthenia) and cerebellar symptoms (preferred term: Nervous system disorder). On an unknown date, 1 week after starting treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml, the patient experienced afebrile seizure (preferred term: Seizure), tremor (preferred term: Tremor) and sudden loss of consciousness (preferred term: Loss of consciousness). On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia), unresponsive to stimuli (preferred term: Unresponsive to stimuli), paresthesia (preferred term: Paraesthesia), numbness and tingling (preferred term: Hypoaesthesia), pulmonary thrombosis (preferred term: Pulmonary thrombosis), cerebral venous thrombosis (preferred term: Cerebral venous thrombosis), collapsed and became apneic (preferred term: Circulatory collapse), plt: 25 (preferred term: Platelet count decreased), appetite lost (preferred term: Decreased appetite), nausea (preferred term: Nausea), flu like symptoms (preferred term: Influenza like illness), persistent headache (preferred term: Headache), lethargic (preferred term: Lethargy), personality change (preferred term: Personality change), focal or multifocal neurological signs (preferred term: Neurological symptom), massive left hemispheric intraparenchymal hemorrhage (preferred term: Cerebral haemorrhage), apnea (preferred term: Apnoea), d-dimer: 21470 (preferred term: Fibrin D dimer increased), fibrinogen: 2.54 (preferred term: Blood fibrinogen) and anti pf4 elisa and sra positive (preferred term: Heparin-induced thrombocytopenia test positive). As per reporter 61 years male patient with history of right chest skin cancer removed a month before the Covid vaccine. 7 days after the vaccine developed seizure, witnessed by the health care provider, sudden loss of consciousness and tremor. He had lethargy and personality change for greater or equal to 24 hrs had focal or multifocal neurological signs along with numbness and tingling. 2 weeks after the vaccine, patient was admitted to the emergency room: very ataxic, unable to ambulate, low strength, cerebellar symptoms and patient had right sided weakness. On the following day patient experienced collapsed and became apneic, was intubated and stabilized. On an unknown date, platelet count was measured and it was found to be 25 (units not specified), D-dimer was measured and result was 21470 (units not specified), fibrinogen was measured and it was found to be 2.54 (units not specified), magnetic resonance imaging (MRI) venogram was performed and result was massive left hemispheric intraparenchymal hemorrhage, CT PE PROTOCOL was performed and result was Pulmonary embolism (PE) in left lower lobe, Anti PF4 was found to be positive, ELISA was performed and it was found to be positive and Serotonin release assay was performed and it was found to be positive.

Action taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable.

The patient died from the event of thrombocytopenia, unable to ambulate, weakness left or right side, unresponsive to stimuli, paresthesia, numbness and tingling, pulmonary thrombosis, cerebral venous thrombosis, afebrile seizure, collapsed and became apneic, plt: 25, appetite lost, nausea, flu like symptoms, persistent headache, cerebellar ataxia, lethargic, tremor, sudden loss of consciousness, personality change, focal or multifocal neurological signs, low strength, cerebellar symptoms, massive left hemispheric intraparenchymal hemorrhage, apnea, d-dimer: 21470, fibrinogen: 2.54 and anti pf4 elisa and sra positive on [redacted]2021.

It was not known whether an autopsy was performed. The cause of death was thrombocytopenia, unable to ambulate, weakness left or right side, unresponsive to stimuli, paresthesia, numbness and tingling, pulmonary thrombosis, cerebral venous thrombosis, afebrile seizure, collapsed and became apneic, plt: 25, appetite lost, nausea, flu-like symptoms, persistent headache, cerebellar ataxia, lethargic, tremor, sudden loss of consciousness, personality change, focal or multifocal neurological signs, low strength, cerebellar symptoms, massive left hemispheric intraparenchymal hemorrhage, apnea, d-dimer: 21470, fibrinogen: 2.54 and anti pf4 elisa and sra positive.

The events were considered serious (death, hospitalised and important medical event).

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 vaccine is an Astrazeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca/MedImmune 11-OCT-2021 A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer: Regulatory authority as a reporter was added. Suspect product indication was added, event verbatim for event became apneic and apnea was changed to apnea and verbatim for collapsed was changed to collapsed and became apneic. Lowest level term of event d-dimer: 21470 was changed from D-dimer high to D-dimer, anti pf4 elisa and sra positive was changed from ELISA to Heparin-induced thrombocytopenia test positive as per company physician. Laboratory data was updated. Corrected Report 19-OCT-2021: Action taken was changed to not applicable.

Minor correction 21-Oct-2021: correction to company clinical comment.

Summary of follow-up information received by AstraZeneca on 21-NOV-2021. A spontaneous report was received from the regulatory authority via consumer: The Seriousness criteria as important medical event (IME) was added for all the events and narrative updated accordingly.
CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: UNABLE TO AMBULATE CAUSE OF DEATH: WEAKNESS LEFT OR RIGHT SIDE CAUSE OF DEATH: UNRESPONSIVE TO STIMULI CAUSE OF DEATH: PARESTHESIA CAUSE OF DEATH: NUMBNESS AND TINGLING CAUSE OF DEATH: PULMONARY THROMBOSIS CAUSE OF DEATH: CEREBRAL VENOUS THROMBOSIS CAUSE OF DEATH: AFEBRILE SEIZURE CAUSE OF DEATH: COLLAPSED AND BECAME APNEIC CAUSE OF DEATH: PLT: 25 CAUSE OF DEATH: APPETITE LOST CAUSE OF DEATH: NAUSEA CAUSE OF DEATH: FLU-LIKE SYMPTOMS CAUSE OF DEATH: PERSISTENT HEADACHE CAUSE OF DEATH: CEREBELLAR ATAXIA CAUSE OF DEATH: LETHARGIC CAUSE OF DEATH: TREMOR CAUSE OF DEATH: SUDDEN LOSS OF CONSCIOUSNESS CAUSE OF DEATH: PERSONALITY CHANGE CAUSE OF DEATH: FOCAL OR MULTIFOCAL NEUROLOGICAL SIGNS CAUSE OF DEATH: LOW STRENGTH CAUSE OF DEATH: CEREBELLAR SYMPTOMS CAUSE OF DEATH: MASSIVE LEFT HEMISPHERIC INTRAPARENCHYMAL HEMORRHAGE CAUSE OF DEATH: APNEA CAUSE OF DEATH: D-DIMER: 21470 CAUSE OF DEATH: FIBRINOGEN: 2.54 CAUSE OF DEATH: ANTI PF4 ELISA AND SRA POSITIVE

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Thrombosis (Preferred term: Hemiparesis & Preferred term: Pulmonary thrombosis & Preferred term :Cerebral venous thrombosis) in combination with thrombocytopenia (Preferred term: Thrombocytopenia & Preferred term: Platelet count decreased) , Headache, Decreased appetite, Lethargy, Tremor, Asthenia, Nausea and Influenza like illness are listed in the company core data sheet of AZD1222. However, since the events were reported with a fatal outcome it is considered unlisted. Fatal events of Gait inability, Unresponsive to stimuli, Paraesthesia, Hypoaesthesia, Seizure, Circulatory collapse, Cerebellar ataxia, Loss of consciousness, Personality change, Neurological symptom, Nervous system disorder, Cerebral haemorrhage , Apnoea, Fibrin D dimer increased & Heparin-induced thrombocytopenia test positive are not listed in company core data sheet of AZD1222. Additionally, Blood fibrinogen was also reported with this case. The events could be in association with each other. Underlying, medicaal history of skin cancer(metastatic malignant melanoma) could be contributory risk factors to the events of Thrombosis. Due to limited information on baseline health condition before vaccination, relevant family history, concurrent diseases (infections), concomitant medications (heparin), all events onset dates, details and circumstances surrounding the events, genetic conditions predisposing to thrombosis (factor V Leiden, protein C or S deficiency), other possible risk factors(smoking, obesity, prolonged bed rest), lifestyle (alcohol), autopsy report and detailed diagnostic and etiologic workup (clinical assessment, hematologic evaluation, medical notes from a health care provider), the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Reaction first time (B.2.i.7.1)	**Reaction last time** (B.2.i.7.2)	**Outcome** (B.2.i.8)	
		Fatal	

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a patient.

No medical history and no concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, on an unknown date. On an unknown date, the patient experienced rare blood clots (preferred term: Thrombosis). On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis).

Action taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. The patient died from the event of rare blood clots and thrombosis on an unspecified date.

The patient died on an unknown date. The cause of death was rare blood clots and thrombosis. It is not known whether an autopsy was performed.

The events of rare blood clots and thrombosis were considered serious by reporter due to serious criterion of death.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca on 11-OCT-2021 from consumer originating from a spontaneous report: A new reporter of Reporter Regulatory authority was added, a new event of thrombosis was added. Corrected report 13-OCT-2021: Action take for suspect drug was changed from unknown to not applicable, positive dechallenge was updated accordingly.CAUSE OF DEATH: RARE BLOOD CLOTS CAUSE OF DEATH: THROMBOSIS
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal event of Thrombosis (reported as: RARE BLOOD CLOTS and THROMBOSIS) are not listed in the company core sheet for AZD1222. Cause of death is reported as Rare blood clots and Thrombosis. Due to limited information on baseline health conditions before vaccination, date of vaccination and onset dates of events, patient's demographics, concomitant medications, relevant medical history (deep venous thrombosis, traumatic injury, thrombophilia, arrythmia, neoplastic disease, venous insufficiency), family history of thromboembolism, concurrent conditions (such as chronic obstructive pulmonary disease, congestive heart failure, autoimmune diseases, COVID-19 disease, previous surgery), clinical course, further clarification of the events, specific risk factors (prolonged immobilization, smoking, obesity, recent surgery, contraceptive pills or hormone replacement therapy), etiological and diagnostic work up (pneumonologist and cardiologist consulting, complete blood analysis with coagulation profile, electrocardiogram, echocardiography, antithrombin III, protein C and Protein S count, lupus anticoagulant, fibrin degradation products, Dimer D test, COVID-19 test, pulmonary and brain images), autopsy report, the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Canada Vigilance AER#:	E2B_04270655 (1)	Page#5

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (patient's partner). A 72-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Formulation: Solution for injection, lot number EX0904; Expiration date: unknown) intramuscular, administered in deltoid left on [redacted]2021 12:00 as dose 1, single (at the age of 72-year-old) for covid-19 immunisation. Medical history included ongoing diabetic type 2 from 2006 (onset 2006 until death), plugged arteries (not sure) onset unknown and heart surgery in Apr2020. The patient's concomitant medications were not reported. Facility where the most recent COVID-19 vaccine was administered: Public Health Clinic/Veterans Administration facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Consumer was writing this report on behalf of the deceased partner, (privacy). On [redacted]2021, (privacy) received his first PFIZER vaccine at (privacy) centre. On [redacted]2021, (privacy) complained of a massive headache for which he took 2 tablets of paracetamol (TYLENOL). He then lost consciousness. 911 was called and the Emergency Responders took (privacy) to the Hospital. CT Scan indicated that (privacy) had a large blood clot in his brain. An open-brain surgery was conducted, but (privacy) had never his consciousness. He subsequently was transferred to the Hospice where (privacy) died at 5:10 p.m. on [redacted]2021. (privacy) had no prior medical history of blood clot. PRIVACY called to report his partner's death after he received the bnt162b2 vaccine 7 days prior. Blood clot in the right hemisphere leading to death onset[redacted]2021 with seriousness reported as resulted in death. Required visit to emergency room. Outcome fatal. Treatment with brain surgery. Consumer called to report the death of his partner (reporter insisted on giving his partner's full name) after receiving the first dose of the bnt162b2. He called and left a voice message at 8:29am [redacted]2021 and was called back at 11:20am. He confirmed that his partner received bnt162b2 on [redacted]2021. On [redacted]2021, his partner woke up with excruciating head pain. He took 2 paracetamol and laid down on the couch. At that point he was unconscious. Reported called 911 and his partner was taken to the hospital. During brain surgery they found a blood clot in his right hemisphere. Apparently the clot was so big that it crushed the left hemisphere. Reporter does not think there was an autopsy done but was not sure. His partner has type 2 diabetes since 2006 and had a heart surgery in Apr2010 due to plugged arteries but the reporter is not sure. He said he did not have any history of blood clots. The reporter says he knew he was taking medications but did not know which ones exactly. The adverse event result in emergency room/department or urgent care. The treatment was received for the adverse event included (privacy) received an open-brain surgery. The patient was hospitalized for 11 days. Since the vaccination, the patient had not been tested for COVID-19. The patient died on [redacted]2021. It was unknown if an autopsy was performed.

Follow-up (06Jul2021): Follow-up attempts are completed. No further information is expected.

Follow Up (09Jul2021) The following information was received via fax from a contactable Health Care professional (Physician) includes: Deceased [redacted]2021. It is unknown if autopsy was performed.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

There is reasonable possibility of causal association between the events of cerebral thrombosis, headache and loss of consciousness and the drug as (BNT162B2) is known to increase the risk of thromboembolic events. The patient's medical history of Diabetes Mellitus and plugged arteries are confounding factors for the events.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer. procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable nurse and physician via a Pfizer sales representative. This nurse and physician reported similar events for 17 patients including 13 residents (12 were fully vaccinated in which 1 died, and 1 received the first dose) and 4 staffs (3 were fully vaccinated and 1 received the first dose). This is the 12th of 17 reports corresponding to the resident who was fully vaccinated and died.

A patient of unspecified age and gender received the second dose and first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date were not provided), both via an unspecified route of administration on an unspecified date as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. One (1) resident who tested positive died was also fully vaccinated on an unspecified date. The resident who died did not die from COVID though. GI bleed was put as cause. The course of events was as follows: A COVID-19 outbreak was reported post vaccination with patient's experiencing mild to moderate symptoms. So far, they have 7 positive staff in which 3 were fully vaccinated, 3 were not vaccinated, and 1 received the first dose 4 days prior to testing positive. They also have 15 positive residents, 2 were not vaccinated, 1 received the first dose, and 12 were fully vaccinated. 1 resident who was fully vaccinated and tested positive, died and 1 person required high dose dexamethasone. All positive staffs and residents were vaccinated with Pfizer. It was not reported if an autopsy was performed. The outcome of the other events was unknown.

Information on the lot/batch number has been requested.

Follow-up (07Jul2021): This follow-up is being submitted to notify that the batch/lot number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The patient received full dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on unspecified dates and tested positive, and died from gastrointestinal (GI) bleeding. Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient was possible. However, the fatal event (GI) bleeding was unlikely causally related to the vaccine of BNT162B2. Further information like vaccination/COVID infection date, medical history and clinical course needed for a meaningful medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This spontaneous case was reported by a nurse and describes the occurrence of DEATH (Death), THROMBOSIS (Clot), NEURALGIC AMYOTROPHY (Parsonage-Turner Syndrome), HERPES ZOSTER (Shingles), LOSS OF PERSONAL INDEPENDENCE IN DAILY ACTIVITIES (He is unable to do his activities of daily living such as driving, bathing, feeding, or dressing himself'), ASTHENIA (Lacked strength), PSYCHOMOTOR RETARDATION (Psychomotor retardation), VACCINATION SITE MOVEMENT IMPAIRMENT (unable to move arm), PERIPHERAL SWELLING (arm is swollen) and WEIGHT DECREASED (weight loss) in a 71-year-old male patient who received mRNA-1273 (Moderna CovID-19 Vaccine) (batch no. Unknown) for COVID-19 vaccination.

No medical history was provided by the reporter.
Concomitant products included PREDNISONE, METFORMIN, ATORVASTATIN, ALFACALCIDOL (ONE ALPHA), PREGABALIN, BENSERAZIDE HYDROCHLORIDE, LEVODOPA (PROLOPA), RISEDRONATE SODIUM (RISEDRONATE), HYDRALAZINE, CARVEDILOL, AMLODIPINE, CALCIUM, PANTOPRAZOLE SODIUM SESQUIHYDRATE (PANTOLOC) and MAGNESIUM for an unknown indication.

On [redacted] 2021, the patient received first dose of mRNA-1273 (Moderna CovID-19 Vaccine) (Intramuscular) 1 dosage form. On [redacted] 2021, the patient experienced THROMBOSIS (Clot) (seriousness criteria hospitalization and medically significant), NEURALGIC AMYOTROPHY (Parsonage-Turner Syndrome) (seriousness criterion hospitalization), HERPES ZOSTER (Shingles) (seriousness criterion hospitalization), LOSS OF PERSONAL INDEPENDENCE IN DAILY ACTIVITIES (He is unable to do his activities of daily living such as driving, bathing, feeding, or dressing himself') (seriousness criterion hospitalization), VACCINATION SITE MOVEMENT IMPAIRMENT (unable to move arm) (seriousness criterion hospitalization) and PERIPHERAL SWELLING (arm is swollen) (seriousness criterion hospitalization). On [redacted] 2021, the patient experienced ASTHENIA (Lacked strength) (seriousness criterion hospitalization) and PSYCHOMOTOR RETARDATION (Psychomotor retardation) (seriousness criterion hospitalization). On an unknown date, the patient experienced WEIGHT DECREASED (weight loss) (seriousness criterion hospitalization). The patient died in [redacted] 2021. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, THROMBOSIS (Clot), NEURALGIC AMYOTROPHY (Parsonage-Turner Syndrome), HERPES ZOSTER (Shingles), LOSS OF PERSONAL INDEPENDENCE IN DAILY ACTIVITIES (He is unable to do his activities of daily living such as driving, bathing, feeding, or dressing himself'), ASTHENIA (Lacked strength), PSYCHOMOTOR RETARDATION (Psychomotor retardation) and WEIGHT DECREASED (weight loss) outcome was unknown and VACCINATION SITE MOVEMENT IMPAIRMENT (unable to move arm) and PERIPHERAL SWELLING (arm is swollen) had resolved.

DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available):
On an unknown date, Weight: 15 pounds (Low) 15 pounds.

For mRNA-1273 (Moderna CovID-19 Vaccine) (Intramuscular), the reporter did not provide any causality assessments.

Treatment medication included antiviral (name unspecified).
The patient was hospitalized for 7 days starting one day post vaccination. Patient experienced severe pain, clot, unable to move his arm, shingles and was diagnosed with Parsonage-Turner Syndrome. Nurse stated that patient's arm is swollen presently and bandages had to be changed 3-4 times per day due to leaking. Leaking has diminished some. The patient is unable to use his left arm. He is unable to do his activities of daily living such as driving, bathing, feeding, or dressing himself.

The symptoms of the patient's were improved. The patient almost had no more swelling, able to move his arm, but with less force, still had pain in the hand. But his general condition declined since the vaccination.

On [redacted] 2021, the patient had marked psychomotor retardation and lacked strength. He wasn't able to get up of his chair without help. So patient was sent to the hospital (unspecified date).

On [redacted] 2021, the nurse learnt that patient was died due to unknown cause of death.
This case concerns a death of a 71-year-old, male patient with no relevant medical history, who experienced the unexpected events of thrombosis, neuralgic amyotrophy, h erpes zoster, loss of personal independence in daily activities, vaccination site movement impairment, asthenia, psychomotor retardation, weight loss and peripheral swelling. The events occurred approximately 1 day after the first dose of Moderna COVID-19 Vaccine with exception of asthenia, psychomotor retardation and death which occurred approximately 7 months after the first dose. The patient was initially hospitalized for 7 days, for severe pain, clot, unable to move his arm, shingles, being unable to do his activities of daily living, starting one day post vaccination with Moderna COVID 19 vaccine. The patient was diagnosed with Parsonage-Turner Syndrome. Since then the symptoms were improved and the patient almost had no more swelling, able to move his arm,

Most recent FOLLOW-UP information incorporated above includes:
On [redacted] 2021: FU Received on [redacted] 2021, Three new events lacked strength, he lost weight, about 15 pounds added. Death date was added.

This case concerns a death of a 71-year-old, male patient with no relevant medical history, who experienced the unexpected events of thrombosis, neuralgic amyotrophy, herpes zoster, loss of personal independence in daily activities, vaccination site movement impairment, asthenia, psychomotor retardation, weight loss and peripheral swelling. The events occurred approximately 1 day after the first dose of Moderna COVID-19 Vaccine with exception of asthenia, psychomotor retardation and death which occurred approximately 7 months after the first dose. The patient was initially hospitalized for 7 days, for severe pain, clot, unable to move his arm, shingles, being unable to do his activities of daily living, starting one day post vaccination with Moderna COVID 19 vaccine. The patient was diagnosed with Parsonage-Turner Syndrome. Since then the symptoms were improved and the patient almost had no more swelling, able to move his arm, but with less force, still had pain in the hand. However,, approximately 7 months after the first dose the patient had marked psychomotor retardation and lacked strength due to which patient was sent to the hospital. The pateint died due to unknown cause of death. No autopsy results were provided. The rechallenge was not applicable as it was not reported that the patient received the second dose before death. The benefit-risk relationship of Moderna COVID-19 Vaccine is not affected by this report.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a nurse via (Vista Patient Support Program (Nucala)) patient support programs and described the occurrence of injection related reaction in a 52-year-old male patient who received mepolizumab powder for injection (batch number L64H, expiry date July 2024) for eosinophilic asthma.

Co-suspect products included pfizer-biontech covid-19 vaccine for covid-19 prophylaxis.

On [redacted] 2019, the patient started mepolizumab (subcutaneous) 100 mg (every 4 weeks). On [redacted] May 2021, the patient started pfizer-biontech covid-19 vaccine (intramuscular) at an unknown dose and frequency. On [redacted] 2021, 615 days after starting mepolizumab, the patient experienced injection related reaction. The action taken with mepolizumab was unknown. On an unknown date, the outcome of the injection related reaction was unknown.

It was unknown if the reporter considered the injection related reaction to be related to mepolizumab.

Additional details:
The drug mepolizumab used by the patient was Nucala. Patient clarified with manager about covid vaccine, patient had his Pfizer IM on[redacted] per manager, okay to give injection still today. Patient had injection reaction. Further information had been requested regarding the injection reaction. This case had been linked with CA2021AMR066178, CA2020AMR012765, CA2019AMR192512, CA2019AMR151119 and CA2019AMR149288. It was unknown if the reporter considered the injection related reaction to be related to PFIZER-BIONTECH COVID-19 VACCINE.

Follow up information was received via a consumer on [redacted] 2021:
In[redacted]2021, the patient experienced death (serious criteria death and GSK medically significant). In[redacted]2021, the outcome of the death was fatal. The subject died in[redacted]2021. The reported cause of death was unknown cause of death. It was unknown if the reporter considered the death to be related to mepolizumab and pfizer-biontech covid-19 vaccine. The autopsy information was unknown. Patient's wife reported that the patient passed away 2 weeks ago. The patient's wife did not disclose any other information. Patient's last Nucala injection was [redacted] 2021.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable pharmacist (patient's family member). A 95-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: unknown), via unknown route of administration on [redacted]2021 (at the age of 95 years old) as dose 1, single for COVID-19 immunisation. Medical history included didn't have any comorbidities but had a pacemaker, a strong magnet had to be used to disactivate pacemaker by paramedic to reinitiate his rhythm. The patient's concomitant medications were not reported. Patient passed away on [redacted]2021 (also reported as on [redacted]2021 or [redacted]2021) exactly 3 weeks after patient received his first dose (the day he was supposed to receive his 2nd dose). He only received 1st dose. The patient underwent lab tests and procedures which included antibody test to platelet factor IV with unknown results. The patient died on [redacted]2021. It was unknown if autopsy was performed.

Information about lot/batch number was requested.

Follow-up (15Jun2021): New information received from a contactable pharmacist via fax includes: patient details (age at vaccination), suspect drug details (updated trade name and vaccination date), event details (death date), and laboratory data.

No follow-up attempts are possible, information about batch number cannot be obtained.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Information provided is limited and does not allow a thorough medical assessment of this fatal case. Causality cannot be completely excluded for the ongoing treatment with suspect drug according to Company internal procedure for cases reporting death cause unknown.
The impact of this report on the benefit/risk profile of the Pfizer drugs is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from contactable physicians (one is the mother) via COVAES. This physician reported information both for the mother and fetus. This is the fetus report. A fetus female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 transplacental on [redacted]2021, 13:00 (Batch/Lot Number: E L0203 CC02) as dose 1, single; and dose 2 transplacental, on [redacted]2021, 10:00 (Batch/Lot Number: EW0193) as dose 2, single for covid-19 immunisation. The 33-year-old mother had received both doses of the bnt162b2 vaccine during pregnancy. Medical history was not reported. The mother's concomitant medication included doxylamine succinate, pyridoxine hydrochloride (DICLECTIN) taken for nausea from [redacted]2021 to [redacted]2021; folic acid taken as routine prenatal care from 2018, fish oil (OMEGA 3) taken for routine prenatal care from 2020 and prenatal vitamin routine prenatal cares in 2018 with 4 gummies per day. On [redacted]2021, the patient experienced Maternal exposure during pregnancy, first trimester. In [redacted]2021, the patient experienced severe congenital heart disease. The event severe congenital heart disease required visit to physician office/ hospital admission. It was reported that the mother of the

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

patient was given 1st dose in 1st trimester of pregnancy which resulted in severe congenital heart disease identified. There was no other cause identified. On an unspecified date, the patient experienced large ventricular septal defect (cardiac defect in baby) and double inlet left ventricle. First dose was given at time of cardiogenesis link and large ventricular septal defect. The events were considered serious due to congenital anomaly. The mother had a genetrics consult on [redacted]021. The mother had any problems before delivery which included severe cardiac defeat, pregnancy ended. Mother had a caesarian section at 21 weeks fetal demise and was sent for autopsy. Induced abortion on [redacted]2021 with gestational age at 21 weeks. Patient had a congenital malformation: double inlet left ventricle CHO. Reason of termination included double inlet left ventricle and severe congenital heart disease at 21 weeks. Laboratory tests and procedures included panorama, general testing and microdeletion panel on [redacted]2021 showed low risk no trisomy or microdeletion identified; fetal echocardiogram on [redacted]2021 showed double inlet left ventricle/ severe cardiac defect and amniocentesis on [redacted]2021 showed normal CMA/ no (illegible in chromosome analysis), fetal cardiac scan by MFM in [redacted]2021 showed fetal cardiac defect, and routine fetal anatomy scan on [redacted]2021 (cardial defect, otherwise normal). The mother also underwent ante natal check-up which included multiple noninvasive prenatal screening (NIPS) (panorama test) on [redacted]2021 was normal and weekly ultrasound with maternal fetus medicine was normal cervical length. The father of the patient was drinking during mother's pregnancy which included 1/2 units daily. Outcome of Large ventricular septal defect (cardiac defect in baby) was unknown. The patient died on [redacted]2021 due to severe congenital heart disease and maternal exposure during pregnancy, first trimester and double inlet left ventricle. On [redacted]2021, reported results of serology: rubella immune. Ante natal check-up: Multiple NIPS (panorama test) [redacted]2021. Normal, Weekly ultrasound with maternal fetal medicine (MFM) - normal cervical length, Routine fetal anatomy scan [redacted]2021 (cardiac defect, otherwise normal), Fetal cardiac scan by MFM [redacted]2021, fetal cardiac defect, genetics consult [redacted]2021, fetal echo [redacted]2021 -double inlet in left ventricle. An autopsy was performed, and results were provided. Additional information on 14Jan2022: Autopsy results: Normal beyond congenital heart disease. Double inlet left ventricule. Normal complete exome sequence. Narrative: Complete autopsy done- only cardiac anomalies identified. Congenital cardiac malformation, with double outlet left ventricule, perimembranous ventricular septal defect and co-arctation of the aorta.
Investigation results included Brief complaint description: Product quality investigation request lot number EL0203 CC02 and EW0193 Adverse event: Severe congenital heart disease, date: [redacted]2021, seriousness criteria: resulted in fetal death, AE required visit to: Physicians office/ hospital admission, Outcome; fatal [redacted]2021 fetal disease, treatment: unknown. Comments: 33 years old patient 1st dose given in 1st trimester of pregnancy. Resulting severe congenital heart disease identified. no other cause identified. QAEF attached FDA 15-Day report. PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE- EW0193- Adverse Event Safety Request For Investigation. Reasonably Suggest Device Malfunction was No. Severity of Harm: NA. Root Cause: Process Related: No, Final Confirmation Status: Not Confirmed, Vendor Related: No. Lot-Specific Trend Identified: No. Lot Trend Assmt. & Rationale: The complaint history for the reported PFIZER-BIONTECH. COVID-19 VACCINE lot EW0193 was reviewed. As of July 19, 2021, this is the only complaint for this lot and classification. No lot specific trend was identified that would require additional investigation. Lot Trend Actions Taken: There were no lot trend actions taken as a result of this investigation. Site Sample Status: Not Received. Summary of Investigation from Kalamazoo (EP) division was: The initial scope of the investigation was limited to the reported finished goods lot EW0193, fill lot EP8739, and the bulk formulated drug product lot EP8620. Based on the results of this investigation, the scope was not expanded. Manufacturing and packaging batch records were examined. There were no planned or unplanned deviations recorded during the manufacture of the lot that may have impacted product quality. Pfizer Kalamazoo QO did not receive a complaint sample or photographs for examination. The complaint was not confirmed. No related quality issues were identified during the investigation. There were no planned or unplanned deviations recorded during the manufacture of the lot that were determined to have an impact on product quality. A review of the manufacturing and packaging records confirmed all processing steps met established requirements, all noted defects were within limits and discarded, elapsed time tracking was within limits, and the freezer storage was acceptable. There were no product quality defects observed during the examination of retained reference samples. There is no impact to the quality of the lot. It is unknown how the product was handled, stored, or administered after it left the Kalamazoo site. Investigational report conclusion from Kalamazoo (EP) division was: The complaint for an adverse event requested by safety with the use of the PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE lot EW0193 was investigated. The investigation included reviewing the manufacturing and packaging batch records, retained reference samples, deviation investigations and an analysis of the complaint history for the reported lot. The final scope was determined to be the reported finished goods lot EW0193, fill lot EP8739, and the bulk formulated drug product lot EP8620. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality. No root cause or CAPA were identified as the complaint was not confirmed. Product quality investigation request lot number EL0203 CC02 and EW0193. Adverse event: Severe congenital heart disease, date: [redacted]021, seriousness criteria: resulted in fetal death, AE required visit to: Physicians office/ hospital admission, Outcome; fatal [redacted]2021 fetal disease, treatment: unknown.

Product quality investigation request lot number EL0203, Adverse event: Severe congenital heart disease, date: [redacted]2021, seriousness criteria: resulted in fetal death, Root Cause: Process Related: No, Final Confirmation Status: Not Confirmed, Vendor Related: No. Lot-Specific Trend Identified: No. Site Sample Status: Not Received. Investigational report conclusion from Puurs division was: For this lot Adverse Event Safety Request For Investigation and/or Lack Of Effect was previously investigated. A sample was not sent to the QC-lab to determine the amount of active ingredient since the complaint was received within six months after the release date of the involved batch. All analytical results were checked and were within registered limits. The investigation of the referenced PR ID resulted in the following conclusion: Reference PR ID 5788999 (see File attachment in this investigation record). The complaint for "PFIZER-BIONTECH COVID-19 VACCINE" was investigated. The investigation included reviewing the involved batch records, deviation investigation and an analysis of the complaint history for the reported lot and product type. The final scope was determined to be the associated lot(s) of the reported lot EL0203. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality, regulatory, validation and stability. PGS Puurs concludes that the reported defect is not representative of the quality of the batch and the batch remains acceptable. The NTM process determined that no regulatory notification was required. The reported defect could not be confirmed. No root cause or CAPA were identified as the complaint was not confirmed.

Follow-up (18Jun2021): New information received from the same contactable physician via a completed HCP questionnaire, includes: patient details (mother information updated), product details (dosing regimen updated), and clinical course of events added.

Follow-up (13Jul2021): Follow-up attempts are completed. No further information is expected.

Follow-ups (25Aug2021): New information from product compliant group included investigation results.

No follow up attempts are needed. No further information is expected.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Follow-up (10Nov2021): New information received from a contactable physician includes lab data and suspect drug details (updated dose 2 date).

No follow-up attempts are needed. No further information is expected.

Follow-up (14Jan2022): This is a spontaneous report received from a contactable reporter (Nurse).
Updated information included: New reporter, Autopsy results available: Yes, Cause of death and autopsy results section, event (coarctation of the aorta).

No follow-up attempts are needed. No further information is expected.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on temporal association, the causal relationship between BNT162B2 and the reported events cannot be completely ruled out. The impact of this report on benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethic committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer concerning a 55-year old female patient of Caucasian ethnic origin with height 66 in and weight 199 lb.

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (Dose 1, batch number UNKNOWN) 0.5 ml once/single administration, via intramuscular route, on [redacted]2021. On [redacted]2021, the patient experienced pulmonary embolism (preferred term: Pulmonary embolism) and pelvic deep vein thrombosis (preferred term: Deep vein thrombosis).

Treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not changed.

The patient died from the event of pulmonary embolism and pelvic deep vein thrombosis on [redacted]2021.An autopsy was performed. The cause of death was pulmonary embolism with pelvic deep vein thrombosis (confirmed at autopsy) and pulmonary embolism with pelvic deep vein thrombosis (confirmed at autopsy).

The events were considered serious due to seriousness criteria of death and important medical event.

The reporter considered the following event(s) related to treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml: pelvic deep vein thrombosis and pulmonary embolism.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order

Summary of follow-up information received by AstraZeneca 21-Nov-2021, a spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer: New reporter regulatory authority was added. frequency was updated in product tab. Associated case ID added in case tab. Narrative updated.AUTOPSY DETERMINED CAUSE OF DEATH: PULMONARY EMBOLISM WITH PELVIC DEEP VEIN THROMBOSIS AUTOPSY DETERMINED CAUSE OF DEATH: PULMONARY EMBOLISM WITH PELVIC DEEP VEIN THROMBOSIS
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Pulmonary embolism and Deep vein thrombosis (reported as PELVIC DEEP VEIN THROMBOSIS) are not listed in company core data sheet of AZD1222. Due to limited information on the baseline characteristics of the patient, circumstances leading to the events,complete clinical course and management, relevant details on medical history (any history of diabetes,thromboembolic episodes in the past and any history of deep vein thrombosis at other sites), personal and family history of the patient, concurrent diseases,risk factors (smoking, sedentary life style and obesity), etiological and complete diagnostic work up (complete blood picture, coagulation profile, lipid profile, pulmonary angiogram, venous doppler, electrocardiogram and echocardiogram) the evaluation did not find evidence to suggest a causal relationship between the events and the vaccine AZD1222.

ATIA - 19(1)

Bonjour, j'ai reçu un courriel de la part de Mme Michelle Séguin suite à ma déclaration initiale. On me demande de préciser certains détails ce que je vais tenter de faire ici mais je n'ai pas les réponses à certaines de vos questions.

Question : Tout traitement médical que mon père a reçu après l'apparition de l'effet indésirable?

Réponse : Mon père n'a reçu aucun traitement médical après son décès. Il est décédé dans la nuit du [redacted] Ma mère l'a trouvé inconscient le matin. Elle a appelé les ambulanciers qui lui ont fait les manœuvres cardiaques. Selon eux, à ce moment là il avait encore une pression et ils disaient que selon eux ce serait neurologique donc peut-être un AVC. Arrivé à l'hôpital il est décédé.

Question : Les résultats de toute enquête médicales (le cas échéant) avant son décès et /ou diagnostic clinique au sujet du AVC soupçonné?

Réponse : Tel que mentionné, aucune autopsie n'a été faite compte tenu de son âge donc il n'y a aucune enquête médicale avant ou après.

Question : Est-ce qu'un spécialiste / md a posé un diagnostic d'accident vasculaire cérébral (AVC)?

Réponse : Non malheureusement.

Question : L'information au sujet du lieu du décès de mon père?

Réponse : Il est décédé à l'hôpital [redacted]

Il n'y a malheureusement aucune autopsie donc je sais qu'il est difficile d'évaluer ce cas. Toutefois, ce que je peux dire est que mon père avait fait un bilan sanguin peu de temps avant et tout était normal. Aucun diabète, aucun cholestérol, etc.

Il était vieillissant mais n'avait aucun antécédent de maladie cardiaque/avc. Il prenait des médicaments pour contrôler le parkinson, pour la dépression et, entre autre, pour la prostate. J'ai déjà fourni précédemment la liste des médicaments qu'il prenait.

Pour plus d'informations, vous pouvez contacter l'hôpital pour obtenir son dossier et/ou son Md de famille : Dr [redacted]

Subject: Suivie par Santé Canada - Vaccin COVID-19 Pfizer-Biontech

Chère [redacted]

Nous vous remercions et accusons réception de votre déclaration d'effet indésirable soumise au Programme Canada Vigilance le 12 Avril 2021, concernant le produit de santé : Vaccin COVID-19 Pfizer-Biontech.

Veuillez recevoir nos sincères condoléances pour vous et votre famille. Nous comprenons que cette situation doit être difficile et nous apprécions le temps que vous avez pris pour partager cet évènement tragique.

L'information que vous avez fournie dans votre déclaration a été enregistrée dans la base de données du Programme Canada Vigilance sous le numéro d'effet indésirable (NEI) 000945483.

Par conséquent de suivi d'évaluation par Santé Canada, le Programme de Canada Vigilance a identifié cette déclaration pour un suivi.

Canada Vigilance N0	Clarification
000945483 (Date de réception [Santé Canada]): 12/04/2021	Veuillez SVP donnez toute information supplémentaire concernant: • Tout traitement médical que votre père a reçu après l'apparition de l'effet indésirable • Les résultats de toute enquête médicale (le cas échéant) avant son décès et / ou diagnostic clinique au sujet du AVC soupçonné; • Est-ce qu'un spécialiste/ médecin a posé le diagnostic d'accident vasculaire cérébral (AVC) • L'information au sujet du lieu du décès de votre père (l'hôpital/domicile)

Veuillez indiquer le numéro de référence de Santé Canada si vous voulez fournir des renseignements supplémentaires au sujet de cet incident. Nous vous invitons à fournir plus de détails afin de renchérir l'information en lien avec votre déclaration en utilisant l'application de déclaration en ligne disponible pour déclarer un effet secondaire. S'il vous plait, assurez-vous de sélectionner l'option de « suivi » et bien inscrire votre NEI (000945483) aux champs ci-dessous :

Summary (B.5)

Case narrative (B.5.1)

null

Dhpr log details:
Safety Report ID: CA-DHPR-20210412145858_26367
Type of Report: Initiale
HC Ref. No:
Reporter File No.:
Transmission Date: 20210412
First Name: [redacted]
Last Name:
Telephone:
Ext.:
Address:
City:
Province/Territory
Postal Code:
Email address:
Organization:
Reporter Type: Consommateur ou autre non-professionnel de la santé

Patient ID: [redacted]
Age: 89 Année(s)
Sex: Homme
Height: 155 cm
weight: 55 kg
Med History: Vieillesse, historique de parkinson mais à évolution lente (médicaments diminuait de beaucoup symptômes), dépression, problème de prostate
Allergies:

Serious Death: Oui
Date of Death: 2021[redacted]
Serious Life-Threatening:
Serious Disability:
Serious Hospitalization:
Serious Congenital Anomaly:
Serious Other:
Serious Other Explain:

Reaction 1
Outcome:
Reaction Start Date:
Reaction End Date:
Reaction Description: Mon père a été vacciné pour la Covid[redacted]2021 à 16h30pm. Il est ensuite décédé dans la nuit le [redacted]2021. Aucune autopsie n'a été faite mais selon les ambulanciers ce serait neurologique donc peut-être un AVC. Il n'y a aucun antécédent de crise cardiaque ou AVC dans sa famille. Peut-être n'y a t'il aucun lien mais je voulais soumettre son cas pour recherches.

Suspect Product 1
DIN #/NPN #: A4H1K2
Product Name: Vaccin Pfizer-Biontech
Strength: 0 ml millilitre(s)
Strength other:
Dosage form: 0.3ml
Manufacturer: Pfizer
Lot #: A4H1K2 (?)
Expiry date:
Product start date: 2021[redacted]
Product end date:
Dose:
Frequency:
Route of administration:
Route of administration - Other:
Indication:
Reported to Mfr: Oui
Date reported to Mfr: 20210401
Mfr Reference number:
Drug action taken: Inconnu
Dechallenge:
Rechallenge:

Concomitants: Voici la liste des médicaments qu'il prenait :
- Finasteride 5mg (pour prostate)
- Pantoprazole (40mg) (estomac)
- Auro-Mirtazapi (15mg)
- Apo-Levocarb (25mg-100mg)
- Tamsulosin Cr (0.4mg)
- Teva-Loperamid (2mg) (au besoin si diarrhée)

Canada Vigilance AER#:	E2B_04337405 (5)	Page#20

This is a spontaneous report received from contactable consumer (patient's daughter) and physician.

A 102-year-old male patient received BNT162b2 (BNT162B2), on [redacted]2021 at 16:30 as dose 1, single (Batch/Lot number: unknown) at the age of 102 years intramuscular, in left arm for COVID-19 immunisation. The patient's relevant medical history included: "Blood pressure high", start date: 2017 (ongoing); "AFib heart", start date: 2017 (ongoing); "Feet swollen" (unspecified if ongoing), notes: For few years but they were able to manage it; "Glaucoma" (unspecified if ongoing); "Suspect pneumonia", start date: May2017 (unspecified if ongoing), notes: Chest X-ray was negative; "Weight loss", start date: May2017 (unspecified if ongoing); "Osteoporosis", start date: Jun2017 (unspecified if ongoing), notes: on treatment; "Cholesterol", start date: 1985 (unspecified if ongoing); "COVID" (unspecified if ongoing), notes: March 7 (unspecified year); "Vein occlusion", start date: Jul2015 (unspecified if ongoing); "Peripheral arterial disease" (unspecified if ongoing), notes: PAD; "Allergies are to shellfish" (unspecified if ongoing); "Non-smoker" (unspecified if ongoing); "Seldom uses EtOH" (unspecified if ongoing); "Foley catheter" (unspecified if ongoing); "Palpitation" (unspecified if ongoing). Concomitant medications included: PERINDOPRIL oral taken for hypertension, start date: 2017 (ongoing); METOPROLOL oral taken for atrial fibrillation, start date: 2017 (ongoing); APIXABAN oral, start date: 2004 (ongoing); ELIQUIS, start date: 30Jan2017; TIMOPTIC, start date: 21Jul2015; OMNARIS, start date: 05Jun2017; VITAMIN D3, start date: 09Jun2017; CALCIUM, start date: 10Jun2017; RISEDRONATE, start date: 09Jun2017; ACETAMINOPHEN, start date: 29Jun2020; COVERSYL [PERINDOPRIL ARGININE], start date: 11Mar2019. Past drug history included: Norvasc for Hypertension, reaction(s): "Leg swelling", notes: Tablet, Strength: 5 mg. Vaccination history included: Fluviral (Old formulation), administration date: 01Nov2017, when the patient was 98-year-old, for Immunization; Zostavax, administration date: 01Nov2017, when the patient was 98-year-old, for Immunization; td, administration date: 21Jul2015, when the patient was 96-year-old, for Immunization; Fluzone high dose, administration date: 13Nov2018, when the patient was 99-year-old, for Immunization; Pneumo 23, administration date: Jul2012, when the patient was 93 years old, for Immunization. The patient received his first Pfizer vaccine on [redacted]2021. On [redacted]021 (a week after receiving the vaccine), the patient experienced feet swelling (swollen), lack of balance, and became sleepier which resulted in death and required emergency room visit. The swollen feet were something the patient had for few years, but they were able to manage it. He was able to walk by himself, etc. He lived with his daughter. On [redacted]2021, the patient's called his doctor to have him checked as he had swollen feet and was furniture surfing as he had like a lack of balance. The doctor said that he will see him [redacted]2021. On [redacted]021, his father had more and more difficulties to walk and was sleepier and a bit confused too. So, the patient's daughter called the ambulance. At the hospital, the doctor said that the patient has congestive heart failure, he had water on his lung and in his body. He was given furosemide (LASIX) from [redacted]021, and dose was increased from [redacted]2021; metoprolol tartrate 25 mg 1 tablet 2 times daily from [redacted]2021 and amlodipine 5 mg 1 tablet once daily from [redacted]2021 and hold when blood pressure was less than 130 mmHg. He stayed 1 week at the hospital (from [redacted]021 to [redacted]2021) and finally passed away on [redacted]2021. As of [redacted]021, the patient's blood pressure has been elevated into the 160s [redacted]2021) and he has had some edema and also has gained some weight, approximately 10 pounds in about one week and has endorsed in the past couple of days some worsening fatigue, prompting the patient to be brought into the emergency room evening after feeling greatly fatigued and noticing something worst [redacted]021). The patient's daughter was under the impression that after the vaccine, his health dropped, and pushed him over the edge. The patient was hospitalized for all events from [redacted]2021 to [redacted]2021. The outcome of the events was fatal. The patient died on [redacted]2021. It was not reported if an autopsy was performed.

Follow-up [redacted]021): New information received from the same contactable consumer (patient's daughter) includes additional medical history (glaucoma, suspect pneumonia, weight loss, osteoporosis, blood cholesterol abnormal, vein occlusion, peripheral arterial disease (PAD), allergy to shellfish, non-smoker and alcohol use), historical vaccine, additional concomitant medications (ELIQUIS, TIMOPTIC-XE, OMNARIS, VITAMIN D3, calcium, risedronate from 09Jun2017, acetaminophen, COVERSY and ''dobetasol''), past drug history, treatments received and subject's clinical course.

Follow-up (02Jul2021): This is a follow-up spontaneous report from a contactable physician, based on information received by Pfizer from Bristol-Myers Squibb (Manufacturer control number: CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-064624).

This case was received via Pfizer Inc (Reference number: 2021764189) on 25Jun2021 and was forwarded to BMS on 25Jun2021. This spontaneous case was reported by a physician and describes the occurrence of DEATH (Deceased) in 102-year-old male patient who received apixaban (Eliquis) tablet for Cerebrovascular accident prophylaxis. CO-SUSPECT PRODUCTS included tozinameran (Pfizer Biontech Covid-19 Vaccine) for an unknown indication. The patient did not receive any prior vaccination and had no family history. The patient's past medical history included "CholE" (1985). The patient's past medical history included Allergy (Norvasc 5 mg Tablet: leg swelling at the age of 98 and shellfish), Nonsmoker, Alcohol use (Seldom uses ETOH), Palpitation, Hypertension, Central retinal vein occlusion (Left - Occurred in [redacted] June) and Foley catheter. On 30-Jan-2017, the patient started Eliquis (Oral), 2.5 milligram twice a day. In [redacted]2021, the patient started Pfizer Biontech Covid-19 Vaccine (unknown route). DEATH occurred in [redacted]2021. The patient died in [redacted] 2021. The cause of death was not reported. It is unknown if an autopsy was performed. For Eliquis (Oral), the reporter did not provide any causality assessments. This case was linked to CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-062888 (E2B Linked Report).

BMS Medical evaluation comment: This patient had died due to unknown reason after apixaban therapy. Based on the limited information regarding medical history, autopsy reports, laboratory reports, treatment details, it cannot be ascertained that the suspect drug contributed to the reported event.

Information about lot/batch number cannot be obtained. No further information expected.

Follow-up (27Aug2021): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Follow-up (27May2022): This is a spontaneous follow-up report received from a contactable physician. Other Case identifier(s): CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-064624 (BRISTOL-MYERS SQUIBB COMPANY).

Supplemental information was received on 19-May-2022 from a Physician which included the following: Past therapy included Pneumo 23 for immunization. Concomitant medications included Metoprolol, Perindopril and Vitamin D3.

Follow-up (02Jun022): This is a follow-up report combining information from duplicate reports 2021708116 and 202101624815. The current and all subsequent follow-up information will be reported under manufacturer report number 2021708116. Updated information: narrative information.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This patient died after receiving apixaban therapy. Patient also got vaccinated for COVID- 19. Based on the limited information available regarding the cause of death and autopsy details, it cannot be ascertained with the reasonable possibility that the suspect could have caused the event.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via a consumer concerning a patient.

No medical history and no concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5 ML (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route and experienced rare blood clots (preferred term: Thrombosis) and thrombosis (preferred term: Thrombosis).

The action taken for received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5 ML was not applicable. The patient died from the event of rare blood clots and thrombosis.

It is not known whether an autopsy was performed. The cause of death was rare blood clots and thrombosis.

The events experienced rare blood clots and thrombosis were considered serious (Death) by MC since the reporter provided a fatal outcome.

The company physician considered the event rare blood clots related to treatment with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5 ML.

Summary of follow-up information received by AstraZeneca 11-oct-2021: Regulatory authority is added in the reporter tab and new event THROMBOSIS is added in the event and death tab. Corrected Report 14-Oct-2021: The batch number was removed.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.CAUSE OF DEATH: RARE BLOOD CLOTS CAUSE OF DEATH: THROMBOSIS REPORTER'S COMMENTS: Adverse Reaction Report Number: E2B_04347292

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of thrombosis (reported as RARE BLOOD CLOTS) and thrombosis (reported as THROMBOSIS) are not listed in the company core data sheet of AZD1222. The events could be in association with each other. Due to limited information on further clarification of the events, circumstances leading to the events, administration date of AZD1222, onset date of the events, baseline health condition before vaccination especially cardiovascular status, clinical course, treatment details, underlying comorbidities, past and current medical history, family history, concomitant medications, risk factors (smoking, obesity, sedentary lifestyle, diabetes, dyslipidemia, coagulation disorders), date of death, autopsy report, etiologic and diagnostic workup (detailed history, clinical examination, complete blood count, D dimer levels, coagulation profile, relevant imaging studies), the evaluation did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This case was received via Pfizer Inc (Reference number: 2021764189) on [redacted]2021 and was forwarded to BMS on [redacted]2021.
This spontaneous case was reported by a physician and describes the occurrence of DEATH (Deceased) in 102-year-old male patient who received apixaban (Eliquis) tablet for Cerebrovascular accident prophylaxis.

CO-SUSPECT PRODUCTS included tozinameran (Pfizer Biontech Covid-19 Vaccine) for an unknown indication.

The patient did not receive any prior vaccination and had no family history.

The patient's past medical history included "CholE" (1985).
The patient's past medical history included Allergy (Norvasc 5 mg Tablet: leg swelling at the age of 98 and shellfish), Nonsmoker, Alcohol use (Seldom uses ETOH), Palpitation, Hypertension, Central retinal vein occlusion (Left - Occurred in 15th June) and Foley catheter.

On 30-Jan-2017, the patient started Eliquis (Oral), 2.5 milligram twice a day. In [redacted]2021, the patient started Pfizer Biontech Covid-19 Vaccine (unknown route). DEATH occurred in [redacted]2021. The patient died in [redacted]2021. The cause of death was not reported. It is unknown if an autopsy was performed.

For Eliquis(Oral), the reporter did not provide any causality assessments.

This case was linked to CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-062888 (E2B Linked Report).

BMS Medical evaluation comment: This patient had died due to unknown reason after apixaban therapy. Based on the limited information regarding medical history, autopsy reports, laboratory reports, treatment details, it cannot be ascertained that the suspect drug contributed to the reported event.

Supplemental information was received on 19-May-2022 from a Physician which included the following:

Past therapy included Pneumo 23 for immunization. Concomitant medications included Metoprolol, Perindopril and Vitamin D3.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This patient died after receiving apixaban therapy. Patient also got vaccinated for COVID- 19. Based on the limited information available regarding the cause of death and autopsy details, it cannot be ascertained with the reasonable possibility that the suspect could have caused the event.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. The report concerns a female patient of Unknown ethnic origin (age 52 years).

The patients past and current medical history were not reported.

On an unknown date the patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadox1 ncov-19)) once/single administration, via intramuscular route, for product use for unknown indication.

On an unknown date, the patient experienced thrombosis (preferred term: Thrombosis). On an unknown date, the patient experienced blood clots (preferred term: Thrombosis).

It was not applicable if any action was taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadox1 ncov-19)).

The patient died from the event of thrombosis and blood clots on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was blood clots and thrombosis.

The following events were considered serious due to death: thrombosis and blood clots. The following events were considered serious due to important medical event: thrombosis.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship was unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine was an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca/MedImmune on 21-Nov-2021 A spontaneous report received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. Added regulatory authority in reporter tab, added indication for suspect, removed the lot no unknown, added strength and frequency, added event thrombosis. Changed the action taken from unknown to not applicable as it was a fatal case. Added thrombosis in death tab and updated narrative.CAUSE OF DEATH: BLOOD CLOTS CAUSE OF DEATH: THROMBOSIS
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal event of Thrombosis (reported as BLOOD CLOTS and THROMBOSIS) is not listed in company core data sheet of AZD 1222. Due to limited information on health status of the patient before vaccination, exact date of event onset and fatal outcome, date of vaccination, localization of thrombosis, exact circumstances leading to the event, concurrent conditions (chronic obstructive pulmonary disease, congestive heart failure, atherosclerosis), concomitant medications, medical history (cardiovascular disease, deep venous thrombosis, traumatic injury, neoplastic disease, thrombophilia), family history, risk factors (stress, smoking, diabetes, hypertension, arrythmia, hypercholesterolemia), detailed etiological and diagnostic workup (complete physical exam, complete blood profile including platelet count, fibrin D dimer test and complete coagulation panel, cardiac assessment, echocardiogram, relevant computerized tomography or magnetic resonance imaging, doppler ultrasound, and complete autopsyy report), the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

		Fatal	

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

This is a Non-Interventional Study report from a contactable Consumer and a contactable Other Health Professional. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number 000943098. This information was initially reported to Health Canada on 19Mar2021 from an unknown Market Authorization Holder AER# unspecified.

An 85-year-old male patient received bnt162b2 (reported as COVID-19 VACCINE, Batch/Lot number was not reported), intramuscularly on an unspecified date as single dose for covid-19 immunisation; leuprorelin acetate (ELIGARD, 30 mg), subcutaneously from an unspecified date to an unspecified date, then from an unspecified date to an unspecified date, both at 30 mg 1 every 4 Months for prostate cancer. The patient's medical history and concomitant medications were not reported. The patient experienced dizziness, fall, malaise, disease progression and prostate cancer on an unspecified date. The events were reported as serious, serious criteria was reported as death. The action taken in response to the events for leuprorelin acetate was unknown. The patient died on an unspecified date. It was not reported if an autopsy was performed.

No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Follow-up (12Oct2021): This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report number 000943098. This information was initially reported to Health Canada between 19Mar2021 and 03Jun2021 from an unknown Market Authorization Holder. New information received from a contactable Other Health Professional includes: new events disease progression and prostate cancer were added.

The reporter's assessment of the causal relationship of the events with the suspect product was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment.

No follow-up attempts are possible; information about lot/batch number cannot be obtained.
COVID-19 Vaccine - Manufacturer Unknown approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on temporal association, the causal relationship between bnt162b2 and the events dizziness and malaise cannot be excluded. The event fall is not considered to be directly related to the suspect drug; it is most likely due to another event or an external factor. The causal relationship of prostate cancer and disease progression is consider unrelated ; the status of prostate cancer, patient overall health condition as of vaccination day, and circumstances surrounding death were not reported. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from a consumer. The report concerns a male patient (age not provided) of Unknown ethnic origin.

No medical history was reported.

No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml. (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN) 0.5 ml, via intramuscular route, on an unknown date.

The patient died (MedDRA PT: Death) on an unspecified date.

It is not known whether an autopsy was performed. The cause of death was died.

Additional description of the event(s) was as follows: consumer knows only of women who got blood clots but she actually knows of 3 men who died.

The event was considered serious (death).

CAUSE OF DEATH: DIED
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

This case report concerns a male patient with reported fatal outcome (PT: death) in association with AZD 1222. Cause of death was reported as died. Due to limited information regarding patient´s age, date of vaccination, date of death, baseline health condition before vaccination, relevant patient´s and family history, concurrent diseases, concomitant medications, risk factors and in the absence of an autopsy report, the evaluation did not find evidence to suggest a causal relationship between the event and AZD 1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via health professional concerning a patient of unknown gender (age not provided) of Unknown ethnic origin.

No medical history was reported. No concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) Dose Unknown, 0.5 ml once/single administration, via intramuscular route, for product used for unknown indication on an unknown date. On an unknown date, the patient experienced blood clots (preferred term: Thrombosis), thrombosis (preferred term: Thrombosis).

Action taken with suspect Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. The patient died from the event of blood clots and thrombosis on an unspecified date.

The cause of death was blood clots and thrombosis. It was not known whether an autopsy was performed.

The events blood clots and thrombosis were considered serious (death) by AstraZeneca (MC).

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca 21-NOV-2021 received via sapphire: A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via health professional, new reporter regulatory authority added, last name for reporter type other masked, indication and frequency for suspect added, new event thrombosis added, narrative updated.
CAUSE OF DEATH: BLOOD CLOTS CAUSE OF DEATH: THROMBOSIS BLOOD CLOTS - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes THROMBOSIS - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal event of Thrombosis with fatal outcome (death) is not listed in the company core data sheet of AZD1222. Due to limited information on the baseline health characteristics of patient before vaccination, including patient demographic details and date of vaccination, and further circumstances leading to the event, event details including date of onset, relevant medical and family history, concurrent diseases and concomitant medications, risk factors, aetiological and complete diagnostic workup, and autopsy report, the evaluation did not find evidence to suggest a causal relationship between event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via consumer. The report concerned a female patient of Unknown ethnic origin (age 54 years).

No medical history was reported and no concomitant products were reported.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)),Dose 1 via intramuscular route, for covid 19 immunisation on [redacted]2021. On an unknown date, the patient experienced platelet count decreased (preferred term: Platelet count decreased). On an unknown date, the patient experienced cerebral venous thrombosis (preferred term: Cerebral venous thrombosis). On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia). On an unknown date, the patient experienced subdural bleeding (preferred term: Subdural haemorrhage). On an unknown date, the patient experienced headaches (preferred term: Headache). On an unknown date, the patient experienced heparin induced thrombocytopenia test positive (preferred term: Heparin-induced thrombocytopenia test positive). On an unknown date, the patient experienced extreme fatigue (preferred term: Fatigue).Ten days post vaccination, patient presented with headaches and extreme fatigue. Hospital detected subdural bleeding. Patient was transferred to Neurology. Laboratory values were available. Scan was done showed deep cerebral vein thrombosis with several clots. Platelet count was done were at 10.Anti PF4 (ELISA) was done result was positive it deceased on [redacted] 2021.

The action taken with Covid-19 Vaccine Astrazeneca was not applicable. Patient received immunoglobulin. The outcome from the event of platelet count decreased, cerebral venous thrombosis, thrombocytopenia, subdural bleeding, headaches, heparin induced thrombocytopenia test positive and extreme fatigue was fatal.

The patient died on [redacted]2021. The cause of death was platelet count decreased, cerebral venous thrombosis, thrombocytopenia, subdural bleeding, headaches, heparin induced thrombocytopenia test positive and extreme fatigue. It was not known whether an autopsy was performed.

The events were considered serious (death, hospitalised and important medical event).

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca on 21-NOV-2021 via consumer from spontaneous report. Regulatory Authority was updated as first reporter with reporter?s Id E2B_04430265. Indication was updated as covid 19 immunisation. As per company physician event of anti pf4 elisa positive was updated as heparin induced thrombocytopenia test positive and event platelets were at 10 was updated as platelet count decreased and all the events seriousness criteria was updated as death, hospitalised and important medical event.CAUSE OF DEATH: PLATELET COUNT DECREASED CAUSE OF DEATH: CEREBRAL VENOUS THROMBOSIS CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: SUBDURAL BLEEDING CAUSE OF DEATH: HEADACHES CAUSE OF DEATH: HEPARIN INDUCED THROMBOCYTOPENIA TEST POSITIVE CAUSE OF DEATH: EXTREME FATIGUE Unstructured Test Result (Test #1) : Scan showed deep cerebral vein thrombosis with several clots Lab Test #1 : 10061498 Lab Test #2 : 10035525 Lab Test #3 : 10059717
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal events of Subdural hemorrhage and Heparin-induced thrombocytopenia test positive are not listed in the company core sheet for AZD1222. Fatigue and Headache are listed are listed in company core data sheet of AZD1222. However, since the event were reported with a fatal outcome, they are considered unlisted. Thrombosis (Preferred term: Cerebral venous thrombosis) in combination with thrombocytopenia (Preferred term: Thrombocytopenia and Preferred term: Platelet count decreased) is listed in the company core data sheet of AZD1222. However, since the events were reported with a fatal outcome, it is considered unlisted. The events could be in association with each other. Due to limited information on the further clarification of the events, circumstances leading to the events, patients baseline health status before vaccination, relevant medical history (deep venous thrombosis, traumatic injury, neoplastic disease, thrombophilia), concurrent diseases (hypertension, diabetes mellituss, infections, coagulation disorders), concomitant medications, risk factors (prolonged immobilization, smoking, obesity), etiological and complete diagnostic work-up (full diagnostic laboratory panel, complete physical examination, cardiology examination, brain imaging, other relevant imaging studies) and complete autopsy report, the evaluation did not find evidence to suggest a causal relationship between the events and the vaccine AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via Consumer concerning a male patient (age not provided) of Unknown ethnic origin.

The patient's past and current medical history included hypertension (dates not reported) and gastroesophageal reflux disease (dates not reported). No concomitant products were reported.

The patient received AstraZeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number MT0055), via intramuscular route, for product used for unknown indication on 16-APR-2021. On an unknown date, the patient experienced afebrile seizure (preferred term: Seizure). On an unknown date, the patient experienced thrombocytopenia (preferred term: Thrombocytopenia). On an unknown date, the patient experienced platelet count decreased (preferred term: Platelet count decreased). On an unknown date, the patient experienced viit (preferred term: Immune thrombocytopenia). On an unknown date, the patient experienced intracerebral hemorrhage (preferred term: Cerebral haemorrhage). On an unknown date, the patient experienced consciousness loss (preferred term: Loss of consciousness). On an unknown date, the patient experienced hit assay result positive (preferred term: Heparin-induced thrombocytopenia test positive). Laboratory data was available. on an unknown date tested HIT Assay and the result was positive.

Action taken for AstraZeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable. The patient died from the event of afebrile seizure, thrombocytopenia, platelet count decreased, viit, intracerebral hemorrhage, consciousness loss and hit assay result positive on [redacted]2021.

It is not known whether an autopsy was performed. The cause of death was afebrile seizure, thrombocytopenia, platelet count decreased, viit, intracerebral hemorrhage, consciousness loss and hit assay result positive.

The following events were considered serious due to death: afebrile seizure, thrombocytopenia, platelet count decreased, viit, intracerebral hemorrhage, consciousness loss and hit assay result positive. The following events were considered serious due to hospitalized: afebrile seizure, thrombocytopenia, platelet count decreased, viit, intracerebral hemorrhage, consciousness loss and hit assay result positive. The following events were considered serious due to important medical event: afebrile seizure, thrombocytopenia, platelet count decreased, viit, intracerebral hemorrhage, consciousness loss and hit assay result positive.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca 21-NOV-2021: A spontaneous report has been received from the regulatory authority in Canada via consumer. Added Regulatory Authority as a reporter, event viit was added. Event seriousness criteria was updated. Minor correction 25-NOV-2021: Platelet count decreased was deleted from the lab field as the values are not available.CAUSE OF DEATH: AFEBRILE SEIZURE CAUSE OF DEATH: THROMBOCYTOPENIA CAUSE OF DEATH: PLATELET COUNT DECREASED CAUSE OF DEATH: VIIT CAUSE OF DEATH: INTRACEREBRAL HEMORRHAGE CAUSE OF DEATH: CONSCIOUSNESS LOSS CAUSE OF DEATH: HIT ASSAY RESULT POSITIVE Lab Test #1 : 10050829
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal events of seizure, cerebral hemorrhage, platelet count decreased, Immune thrombocytopenia, loss of consciousness, and heparin-induced thrombocytopenia test positive are not listed in company core data sheet of AZD 1222. Thrombocytopenia is listed in the company core data sheet of AZD1222. However, since the event was reported with a fatal outcome, it is considered unlisted. Heparin-induced thrombocytopenia test positive may be in association with thrombocytopenia. Underlying, hypertension may be a contributor risk factor to the events seizure, cerebral hemorrhage, and loss of consciousness. Due to limited information regarding baseline health conditions before vaccination, past medical history of seizure, family history of epilepsy, concurrent conditions (such as intracranial tumor, vascular disorders, metabolic or infectious diseases, head trauma, diabetes mellitus, leukemia) clinical course, etiological and diagnostic work up (complete physical exam including neurological evaluuation, complete blood count with coagulation profile, computed brain tomography, electroencephalogram, lumbar puncture with cerebrospinal fluid analysis, other relevant imaging studies), treatment details, further clarification of the event, risk factors (drugs or alcohol abuse), the evaluation did not find evidence to suggest causal relationship between the event and AZD 1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer via COVAES. An 85-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) at the age of 85-year-old, dose 2 via an unspecified route of administration, administered in Arm Left on [redacted]021 10:00 AM (Batch/Lot Number: Unknown) as single dose for covid-19 immunisation. The patient medical history was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The COVID-19 vaccine was administered in Other (as reported). Prior to vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications (medications the patient received within 2 weeks of vaccination) included prescription anticoagulants. Historical Vaccine included bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) for covid-19 immunisation on [redacted]021 at the age of 85-years-old (DOSE 1, SINGLE, time: 08:30 AM, Anatomical Location Arm left). The patient experienced inappropriate dosing schedule on [redacted]2021 10:00, on [redacted]021 10:00 had what seemed to be a heart attack and died. Due to heart attack, treatment included CPR provided by family and by paradamics. Date of death [redacted]2021, no autopsy was done. Since the vaccination, the patient has not been tested for COVID-19.

Information about Batch/Lot number has been requested.

Follow-up (10Aug2021): This follow-up is being submitted to notify that the batch/lot number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

BNT162B2 approved under Interim Order in Canada.

Complete all mandatory items, marked by a *, and provide as much information as possible for the remaining items. PROTECTED WHEN COMPLETED – B**

A. Patient Information

1. Identifier [redacted]

2. Age	3. Sex*	4. Height	5. Weight
☐ Years ☐ Months	☐ Male ☑ Female	5'2" cm / feet	140 kg / lbs

B. Adverse Reaction

1. Outcome attributed to adverse reaction (Select all that apply)

- ☑ Death: 21 [redacted] (yyyy-mm-dd)
- ☐ Life-threatening
- ☐ Hospitalization
- ☐ Hospitalization – prolonged
- ☐ Disability
- ☐ Congenital malformation
- ☐ Required intervention to prevent damage/impairment
- ☐ Other:

2. Reaction date (yyyy-mm-dd): /

3. Report date (yyyy-mm-dd): 21 [redacted]

4. Describe reaction or problem*

72yr 9 hx of hypertension + fatty liver + Alcohol use. Received Covid vaccine for prophylaxis

5. Relevant tests/laboratory data (including dates (yyyy-mm-dd))

ϕ

6. Relevant history and pre-existing medical conditions (e.g. allergies, pregnancy, smoking/alcohol use, hepatic/renal dysfunction)

Alcohol Abuse
Fatty liver
hypertension

C. Suspected Health Product(s)

1. Name*, strength and manufacturer (if known)

#1 Pfizer Covid-19

#2 D was give at [redacted]

2. Dose, frequency and route used

#1	#2
IM	

3. Therapy dates (or duration)

#1 From (yyyy-mm-dd) To (yyyy-mm-dd)	#2 From (yyyy-mm-dd) - To (yyyy-mm-dd)
2021 [redacted]	

4. Indication for use

#1 Vaccine Covid-19 #2

5. Reaction abated after use stopped or dose reduced

#1 ☐ Yes ☐ No ☐ Does not apply #2 ☐ Yes ☐ No ☐ Does not apply

6. Lot #	7. Expiration
#1	#1 (yyyy-mm-dd)
#2	#2 (yyyy-mm-dd)

8. Reaction reappeared after reintroduction

#1 ☐ Yes ☒ No ☐ Does not apply #2 ☐ Yes ☐ No ☐ Does not apply

9. Concomitant health products, excluding treatment of reaction (name, dose, frequency, route used and therapy dates (yyyy-mm-dd))

Norvasc 10mg OD
Losartan 100mg OD
Had 3 glasses of wine [redacted] /21

10. Treatment of reaction, including dates (yyyy-mm-dd)

patient had no reaction. Died a natural death

D. Reporter Information

[redacted]

2. Health professional?	3. Reported to manufacturer?
☑ Yes ☐ No	☐ Yes ☑ No

Subject / Sujet: Health Canada Follow-Up Clarification Request (PFIZER-BIONTECH COVID-19 VACCINE)

EXTERNAL

Re: Health Canada Follow-Up Clarification Request

Good morning Dr. [redacted]

We are contacting you today to confirm receipt of the adverse event following immunization (AEFI) report submitted to the Canada Vigilance Program on April 26th, 2021.

As the result of internal Health Canada assessment process, the Canada Vigilance Assessment Team has identified the present individual case safety reports (ICSRs) where clarification is needed in order to complete the case evaluation.

Canada Vigilance Case Number	**Clarification Requested**
000947581 Suspect product: PFIZER-BIONTECH COVID-19 VACCINE Received by Health Canada on 26/04/2021	Would you kindly have any information of the following: Any information about the cause of death? Was autopsy performed? What are details of medical treatment the patient received before death? no autopsy - Cause of death NSHB Any laboratory investigation and results related to the patient's death (e.g. complete blood count with platelet count, d-dimer level, CT, MRI, Electrocardiogram etc., if available)? — NO

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

- What was the patient's COVID-19 status before and at the time of her death? negative

May you please kindly respond to both myself, Michelle Séguin michelle.seguin@canada.ca in addition to the Canada Vigilance COVID-19 Vaccine generic account (hc.canada.vigilance.COVID19vaccine-vaccinCOVID19.sc@canada.ca).

Or, if you prefer, you may fax the requested information to the **Canada Vigilance Program fax at 1-866-678-6789**; please cite **case number 00947581** if replying by this means.

If you require further information within the scope of this request, please do not hesitate to contact me.

We thank you once again for your time

Sincerely,

Michelle Séguin on behalf of,

The Canada Vigilance Program

Summary (B.5)

Case narrative (B.5.1)

This is spontaneous report received via COVAES from a contactable consumer.
A 54-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number was not reported), in arm right on [redacted]2021 at 15:00 (at 54 years) as single dose for covid-19 immunisation . Medical history included Downe Syndrome (as reported). Concomitant medication included risperidone taken for an unspecified indication, start and stop date were not reported. On [redacted]2021 at 15:00 patient experienced severe headaches, severe neck pain, swollen spine behind the esophagas, infection in spine, all this causing to be bedridden and then (date unspecified in 2021)fluid in lungs, causing pneumonia, then causing low oxygen and needing to be on oxygen 24/7 (as reported). Events required emergency room/department or urgent care. Patient was hospitalized for 36 days in 2021 due to the events, that are also serious as life threatening. On [redacted]2021 patient had oxygen distress serious per hospitalized and life threatening. Patient was treated with IV antibiotics, oxygen,steroid and puffers.Patient died on [redacted]2021 due to overloaded by medication and oxygen distress. Outcome of oxygen distress was fatal; outcome of the other events was not recovered. It was unknown if an autopsy was done. No follow-up attempts are possible, information about batch number cannot be obtained.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from two contactable healthcare professionals. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, Lot number and expiration date unknown), dose 1, single and dose 2, single, both received via an unspecified route of administration on unspecified dates for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced COVID-19 on an unspecified date. The reporter stated that there was an outbreak of the delta variant after 2 doses of BNT162B2 was received. All residents were positive and have very mild symptoms although one death has been reported. The patient underwent a COVID-19 virus test on an unspecified date with the following result: positive (Delta variant). The patient died on an unspecified date. It was not reported if an autopsy was performed.

Follow-up (10Sep2021): This follow-up is being submitted to notify that the batch/lot number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information available and close temporal association, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported events . The case will be reassessed once new information is available

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This case was reported by a physician via regulatory authority and described the occurrence of asthmatic attack in a 56-year-old female patient who received mepolizumab solution for injection in pre-filled pen for eosinophilic asthma.

Co-suspect products included mepolizumab autoinjector device administration system (batch number Unk, expiry date unknown) for eosinophilic asthma, tozinameran (Pfizer-Biontech Covid-19 Vaccine) for covid-19 prophylaxis, covid-19 vaccine for covid-19 prophylaxis, tozinameran (Comirnaty) for covid-19 immunization and covid-19 vaccine nrvv ad (chadox1 ncov-19) (Vaxzevria) unknown for covid-19 immunization.

On 27th April 2021, the patient started mepolizumab (subcutaneous) 100 mg (see dose text) and mepolizumab autoinjector device. On 12th April 2021, the patient started Pfizer-Biontech Covid-19 Vaccine at an unknown dose and frequency. On [redacted] 2021, the patient started covid-19 vaccine at an unknown dose and frequency. On an unknown date, the patient started Comirnaty (unknown) at an unknown dose and frequency and Vaxzevria (intramuscular) at an unknown dose and frequency. On [redacted] 2021, 56 days after starting mepolizumab and mepolizumab autoinjector device, the patient experienced missed dose (serious criteria death). On an unknown date, the patient experienced asthmatic attack (serious criteria death). On [redacted] 2021, the outcome of the asthmatic attack was fatal. On an unknown date, the outcome of the missed dose was fatal. The subject died on [redacted] 2021. The reported cause of death was asthmatic attack and missed dose.

It was unknown if the reporter considered the asthmatic attack and missed dose to be related to mepolizumab and mepolizumab autoinjector device. This report is made by GSK without prejudice and does not imply any admission or liability for the incident or its consequences.

Linked case(s) involving the same patient: CA2020AMR168025, CA2021AMR113784

GSK Receipt Date: [redacted] 2021
Reporter's Comments: Initial with date [redacted] 2021 and follow up with date [redacted] 2021 processed together. This case was received from physician via Vista Patient Support Program (Nucala) patient support programs on [redacted] 2021. Patient had her first COVID vaccine on 15 April 2021. Patient started her first Nucala injection on 27 April 2021. Patient was due for next COVID injection on [redacted] 2021 however this was pushed up to [redacted] 2021. MD (Doctor of medicine) informed that the patient passed away from a respiratory illness on [redacted] 2021. Last Nucala injection was given on [redacted] 2021. It was reported as: Patient was initially booked for next COVID injection on [redacted] 2021, but could obtain an earlier appointment and received COVID vaccine on [redacted] 2021. It was unknown if the reporter considered the asthmatic attack to be related to covid-19 vaccine. The patient was taking mepolizumab as Nucala (auto-injector). This case was linked to cases CA2021AMR113784 and CA2020AMR168025 as same patient.

Follow up information was received from Physician via sale rep on [redacted] 2021. Physician reported that a patient died following asthma attack. Patient took Nucala from 4 months and had second dose of Covid-19 vaccine the same day as the last Nucala injection. Patient died about a month later, on [redacted] 2021. The Physician was now concerned by the safety of Nucala. Lot number was not available. Format of Nucala was not available. Suspect product was started 4 months ago, patient was also with Nucala PSP (patient support program). Sales rep tried to submit the AE (adverse event) through the system directly to PV (pharmacovigilance) but she was not sure it went through (no ref number was received) so she called Medical Information. Consent to follow-up granted. No other information provided.

Follow up information was received from patient support program on 23 July 2021:
The nurse reported that the patient received the first dose of Pfizer COVID-19 vaccine on 12 April 2021. The patient received the first dose of Nucala on 27 April 2021 and the second dose of Nucala on 25 May 2021. The patient received the second dose of COVID- 19 vaccine (brand unknown) on [redacted] 2021. The patient was planned to receive the third dose of Nucala on [redacted] 2021 however did not receive the dose on this date as physician authorization due to proximity to the COVID-19 vacccine was pending. The physician has recommended an autopsy be performed. . It was unknown if the reporter considered the asthmatic attack to be related to Covid-19 vaccine and Pfizer COVID-19 vaccine. It was unknown if the reporter considered the asthmatic attack to be related to Covid-19 vaccine and Pfizer COVID-19 vaccine.

Follow-up information received on 16-Aug-2022. This follow-up was considered significant.
Reporter's Comments: It was unknown if the reporter considered the asthmatic attack to be related to Comirnaty and Vaxzevria.
Summary of Changes: Added suspect product details. Updated causality for missed dose and cause of death.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Asthma and Product dose omission issue are unlisted events which are considered unrelated to GSK drug Mepolizumab and mepolizumab autoinjector device.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable physician for a 24-year old-male consumer (patient), communicated to a sales representative regarding product BNT162B2.

A 24-year-old male patient received BNT162b2 (PFIZER-BIONTECH COVID-19 Vaccine, Formulation: solution for injection, Lot number and expiration date was not reported), via unspecified route of administration on unknown date as dose number unknown, single for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The reporter stated that a healthy and active 24 year old patient who received the Pfizer vaccine on a Sunday passed away in his sleep and didn't wake up Monday morning. Event took place after use of product. It was unknown if autopsy was performed.

No follow-up attempts are not possible. No further information expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The information on the circumstances of the patient's death is too limited to perform a meaningful company causality assessment: this event is handled as related to the suspect product BNT162B2 as a cautionary measure and for reporting purposes.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable pharmacist. A 69-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly at age of 69-years-old on [redacted]2021 (Lot Number: EX0904 and Expiration Date: 31Jul2021) as single dose for covid-19 immunisation. The patient medical history was not reported. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient experienced multi system organ failure on [redacted]2021, Suspected (VITT) Vaccine-induced Immune Thrombotic Thrombocytopenia, Deep vein thrombosis (DVT), Cerebrovascular accident (CVA), all on [redacted]2021. The patient was hospitalized for Suspected Vaccine-induced Immune Thrombotic Thrombocytopenia (VITT), Deep vein thrombosis (DVT), Cerebrovascular accident (CVA) for 13 days. Since the vaccination, the patient had been tested for COVID-19. The patient underwent lab tests and procedures which included Nasal Swab: negative. Treatment received for the events included anticoagulation initially. Events resulted in Emergency room/department or urgent care. The patient died on [redacted]2021 due to multi system organ failure. An autopsy was not performed. Outcome of other events was unknown.
On 31Aug2021, investigation result was received regarding consumers complaint about (PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE) Lot: EX0904, Expiration Date: 31Jul2021.Brief complaint description: Product quality investigation request. Lot Number: EX0904. Since the vaccination, has the patient been tested for COVID-19?:Yes,Reasonably Suggest Device Malfunction: No, Severity of Harm: N/A, Complaint Class:External Cause Investigation,Complaint Sub Class:Adverse Event Safety. Request For Investigation, Root Cause: Non-assignable, Process related: No, Final Confirmation Status: Not confirmed, Vendor Related: No ,Lot-Specific Trend Identified: No, Lot Trend Assmt & Rationale: Lot history period: as COVID was only introduced on the market as of DEC 2020, all available complaint data was reviewed until 31Aug2021. Lot history parameters: FP-batch: EX0904. The complaint history has been reviewed for the reported batch. Based on the complaint subclass of the received complaint, complaints with subclasses Adverse Event Safety Request For Investigation and Lack Of Effect were included. 1 complaint has been received since the introduction on the market. Trending regarding adverse event/LOE investigations is performed by Global Safety.,Lot Trend Actions taken: No actions are required.;Other trend Identified?:No ; Other Trend Assmt. & Rationale?: The complaint history has been reviewed for the reported product and subclass Adverse Event Safety Request For Investigation and Lack Of Effect . 13370 similar complaints have been received since the introduction on the market, resulting in a cpm of
88,45. Trending regarding adverse event/LOE investigations is performed by Global Safety. No actions are required. Site Sample Status:Not received ;Summary of Investigation from Pluurs division was The PGS Puurs investigation could not indicate a probable root cause for the complaint to be related to the production process of the involved batch. All reviewed records for the involved batch indicated that the batch met the established requirements at time of release. No impact assessment is required according to SOP-67372 v9.0. No corrective or preventive actions were identified as all reviewed records for the involved batch indicated that the batch met the established requirements at time of release.; Investigational report conclusion from Puurs division was The complaint for PFIZER-BIONTECH COVID-19 VACCINE was investigated. The investigation included reviewing the involved batch records, deviation investigation, an analysis of the complaint history for the reported lot and product type. The final scope was determined to be the associated lot(s) of the reported lot EX0904. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality, regulatory, validation and stability. PGS Puurs concludes that the reported defect is not representative of the quality of the batch and the batch remains acceptable. The NTM process determined that no regulatory notification was required. The reported defect could not be confirmed. No root cause or CAPA were identified as the complaint was not confirmed.

Follow-up (11Aug2021): New information was received via fax from a contactable Health Care professional (Pharmacist) includes: autopsy information (An autopsy was not performed).

Follow-up (31Aug2021): New information received from product quality complaint team includes: suspect drug details (expiration date) and investigation result.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the plausible temporal relation, the association between the events of Multi-organ failure, Immune-mediated thrombocytopenia, Deep Vein thrombosis and Cerebrovascular Accident and the suspect product of BNT162B2 cannot be completely ruled out.

The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable consumer via COVAES. A 65-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, formulation: solution for injection, Lot number: Unknown) via an unspecified route of administration on [redacted]2021 at 09:15 (at the age of 65-year-old) as dose number unknown, single for COVID-19 immunization. The patient's medical history was not reported. The patient did not receive any other medications within 2 weeks of vaccination. Patient did not receive any other vaccines within 4 weeks prior to covid vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. On [redacted]2021 at 06:00, the patient developed brain haemorrhage and on [redacted]2021, the patient diagnosed with acute leukaemia. The adverse events resulted into emergency room/department or urgent care. The patient was hospitalized for 2 days. Treatment included for adverse event was blood cleaning machine. The patient underwent lab tests and procedures which included nasal swab: negative on 27May2020. The patient died on [redacted]2021. The cause of death was brain haemorrhage resulting from acute leukaemia. It was not reported if an autopsy was performed.

The lot number for the vaccine, [BNT162B2], was not provided and will be requested during follow up.

Follow-up (27Aug2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients. This is the second of two reports.

A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot number was not reported), via an unspecified route of administration on an unspecified date as dose number unknown, single for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The reporter stated she has a relative and she had an anaphylactic reaction to the vaccine, and she died on an unspecified date. The outcome of the event was fatal. It was unknown if an autopsy was performed.

The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Follow-up (21Oct2021): This follow-up is being submitted to notify that the lot/batch number for all doses is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from a contactable consumer (patient's mother). This consumer reported information for both mother and fetus. This is a fetus report.

A fetus patient of an unspecified gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), transplacental, administered in Arm Left on [redacted]021 17:15 (Lot Number: FA9093, Expiration date: 31Oct2021) as dose 2, single, transplacental, administered in Arm Right on [redacted]2021 17:30 (Lot Number: EW0193, Expiration Date: 30Sep2021) as dose 1, single for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The mother is a 37-year-old female, last menstrual period date [redacted]021), Pregnancy Due Date [redacted]022). Facility where the most recent COVID-19 vaccine was administered: Public Health Clinic/Veterans Administration facility. Mother had missed miscarriage - fetal growth stopped at 7 weeks and was diagnosed at 11 weeks. Adverse event resulted in Doctor or other healthcare professional office/clinic visit and Emergency room/ department or urgent care. Treatment was given. The patient died on [redacted]2021. It was not reported if an autopsy was performed.

Investigational report conclusion from Kalamazoo division was The complaint for an adverse event requested by safety with the use of the PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE lot EW0193 was investigated. The investigation included reviewing the manufacturing and packaging batch records, retained reference samples, deviation investigations and an analysis of the complaint history for the reported lot. The final scope was determined to be the reported finished goods lot EW0193, fill lot EP8739, and the bulk formulated drug product lot EP8620. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality. No root cause or CAPA were identified as the complaint was not confirmed.

Conclusion: The complaint for an adverse event requested by safety with the use of the PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE lot EW0193 was investigated. The investigation included reviewing the manufacturing and packaging batch records, retained reference samples, deviation investigations and an analysis of the complaint history for the reported lot. The final scope was determined to be the reported finished goods lot EW0193, fill lot EP8739, and the bulk formulated drug product lot EP8620. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality. No root cause or CAPA were identified as the complaint was not confirmed.

Summary of Investigation: The initial scope of the investigation was limited to the reported finished goods lot FA9093, fill lot EY0549, and the bulk formulated drug product lot EP8653. Based on the results of this investigation, the scope was not expanded. Manufacturing and packaging batch records were examined. There were no planned or unplanned deviations recorded during the manufacture of the lot that may have impacted product quality. Pfizer Kalamazoo QO did not receive a complaint sample or photographs for examination. The complaint was not confirmed. No related quality issues were identified during the investigation. There were no planned or unplanned deviations recorded during the manufacture of the lot that were determined to have an impact on product quality. A review of the manufacturing and packaging records confirmed all processing steps met established requirements, all noted defects were within limits and discarded, elapsed time tracking was within limits, and the freezer storage was acceptable. There were no product quality defects observed during the examination of retained reference samples. There is no impact to the quality of the lot. It is unknown how the product was handled, stored, or administered after it left the Kalamazoo site.

Conclusion: The complaint for an adverse event requested by safety with the use of the PFIZER-BIONTECH COVID-19 VACCINE lot FA9093 was investigated. The investigation included reviewing the manufacturing and packaging batch records, retained reference samples, deviation investigations and an analysis of the complaint history for the reported lot and product type. The final scope was determined to be the reported finished goods lot FA9093, fill lot EY0549, and the bulk formulated drug product lot EP8653. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality. No root cause or CAPA were identified as the complaint was not confirmed.

Follow-up (06Sep2021): Follow-up attempts completed. No further information expected.

Follow up (08Sep2021, 08Sep2021): New information received from product quality complaint team includes: suspect drug information, investigation result.

No follow-up attempts are needed. No further information is expected.
BNT162B2 approved under Interim Order in Canada.

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via physician concerning a 48-year-old female patient of Unknown ethnic origin (height 67 in, weight 80 kg).

No medical history was reported. Concomitant medication included fluticasone propionate, flurazepam hydrochloride, salbutamol sulfate, fentanyl, nabilone, duloxetine hydrochloride, levothyroxine sodium, melatonin, levomepromazine maleate, ondansetron hydrochloride, rabeprazole sodium, pregabalin, ranitidine hydrochloride, trazodone hydrochloride and diclofenac sodium.

The patient received Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN) once/single administration, via intramuscular route, for immunisation on an unknown date.

On an unknown date, the patient experienced headache (preferred term: Headache), nausea (preferred term: Nausea) and somnolence (preferred term: Somnolence).

Action taken with Astrazeneca Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml was not applicable

On an unspecified date the patient died and the cause of death was headache, nausea and somnolence. It was not known whether an autopsy was performed.

The events were considered serious (death).

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The Astra-Zeneca COVID-19 vaccine is an AstraZeneca Canada inc product authorized under the interim order.

Summary of follow-up information received by AstraZeneca/MedImmune 06-SEP-2021 A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via physician: Health Authority Reference number was captured in the Reporter Case ID field and narrative updated.
CAUSE OF DEATH: HEADACHE CAUSE OF DEATH: NAUSEA CAUSE OF DEATH: SOMNOLENCE HEADACHE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes NAUSEA - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes SOMNOLENCE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes
The Astra-Zeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Headache, nausea and somnolence are listed adverse event for AZD1222. However, as the SAE is reported with the seriousness criteria of Death the event is considered unexpected. Cause of death was reported as headache, nausea, and somnolence. Case is confounded by polypharmacy. Due to limited information on circumstances leading to death, clinical course, concurrent diseases, relevant medical and family history, vaccine AZD122 administration date, events date, etiologic and diagnostic workup, the evaluation did not find evidence to suggest a causal relationship between the events and vaccine AZD1222.

		Fatal	

Summary (B.5)

Case narrative (B.5.1)

This is a Non-Interventional Study report from a contactable Consumer. This is a report received from the Health Canada Regulatory Authority via an on-line database search. Regulatory authority report No 000940311. This information was initially reported to Health Canada between 24Feb2021 and 06Apr2021 from an unknown Market Authorization Holder AER# unspecified

A 95-year-old male subject received bnt162b2 (COVID-19 VACCINE - MANUFACTURER UNKNOWN), intramuscular on an unspecified date (Batch/Lot number was not reported) as DOSE NUMBER UNKNOWN, SINGLE for covid-19 immunisation; leuprorelin acetate (ELIGARD), subcutaneous from an unspecified date (Batch/Lot number was not reported) to an unspecified date, at 22.5 mg, every 3 months; subcutaneous from an unspecified date (Batch/Lot number was not reported) to an unspecified date, at 22.5 mg, every 3 months for prostate cancer. Medical history included prostate cancer from an unknown date. The subject's concomitant medications were not reported. The subject experienced cardiac failure congestive, dyspnoea on an unspecified date. The action taken in response to the event (s) for leuprorelin acetate was unknown. The outcome of the event was fatal. The subject died on an unspecified date. It was not reported if an autopsy was performed

The reporter's assessment of the causal relationship of the events with the suspect product was not provided at the time of this report. Since no determination has been received, the case is managed based on the company causality assessment

Pfizer is the Marketing authorization holder of COVID-19 VACCINE in the country of incidence .This may be a duplicate report if another marketing authorization holder of COVID-19 VACCINE has submitted the same report to regulatory authorities.

No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.
COVID-19 Vaccine - Manufacturer Unknown approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the available information and the strong drug event temporal association, a possible contributory role of suspect product BNT162B2 to development of events Cardiac failure congestive and Dyspnoea cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

FORMULAIRE DE DÉCLARATION DES EFFETS SECONDAIRES

La déclaration des effets secondaires (aussi appelés « effets indésirables ») de produits de santé commercialisés au Canada peut contribuer à l'identification d'effets secondaires graves ou rares, ce qui peut entraîner la modification de l'information sur l'innocuité du produit.

Les instructions sur la façon de compléter et de soumettre le présent formulaire ainsi que l'information concernant la confidentialité se trouvent à la page 2. Compléter tous les items obligatoires, indiqués par un *, et fournir autant d'information que possible pour les autres items.

Veuillez envoyer le formulaire rempli par télécopieur au 1-866-678-6789. Pour de plus amples renseignements, composez le 1-866-234-2345.

PROTÉGÉ « B » LORSQUE REMPLI*

A) Renseignements sur la personne ayant subi l'effet secondaire

N° de référence (le cas échéant) :

1. Âge*	2. Sexe*	3. Taille	4. Poids
48 ans _____ mois	☐ Homme ■ Femme	_____ cm 5 pi 7 po	80 kg _____ lbs _____ oz

5. Antécédents médicaux et autres renseignements pertinents (allergies, grossesse, consommation de tabac/d'alcool, dysfonctionnement hépatique, etc.)

ATCD Fibromyalgie, dépression, Hypothyroïdie

B) Renseignements sur le déclarant

1. Nom*	2. Téléphone*	3. Province/Territoire
[redacted]		

4. Adresse	5. Courriel
[redacted]	

6. Langue préférée	7. Organisation (le cas échéant)
■ français ☐ anglais	[redacted]

8. Choisir ce qui vous décrit le mieux

☐ Consommateur ou autre non-professionnel de la santé ■ Médecin ☐ Pharmacien

☐ Autre professionnel de la santé (spécifier) : _____

9. Cela a-t-il été déclaré au fabricant?

☐ Oui ■ Non

C) Effet secondaire

1. Niveau de sévérité de l'effet secondaire

- ■ Décès (fournir la date) 2021 [redacted]
- ☐ Met la vie en danger
- ☐ Hospitalisation
- ☐ Prolongation d'une hospitalisation
- ☐ Incapacité
- ☐ Malformation congénitale
- ☐ Besoin d'une intervention médicale

2. Rétablissement suite à l'effet secondaire

☐ Oui ■ Non ☐ Inconnu

☐ En cours de rétablissement (expliquer) : _____

3. Date du début de l'effet secondaire* (aaaa-mm-jj)	4. Date de la fin de l'effet secondaire (aaaa-mm-jj)
2021 [redacted]	

5. Décrire l'effet secondaire (ligne de temps, traitement, etc.)*

Céphalée, nausées et somnolence post-vaccination. Patiente décède le [redacted] 2021. Arrivée décédée à l'hôpital. Pas de cause de décès évident. Cas soumis au coroner # cas : [redacted]

D) Produit de santé soupçonné

1. Nom du produit	2. Concentration	3. Fabricant
Vaccin Covid		Astra Zeneca

4. N° du lot	5. N° du DIN / N° du NPN
?	?

6. Pays d'achat	7. Où le produit a-t-il été acheté/obtenu?
■ Canada ☐ États-Unis ☐ Autre (spécifier) : _____	☐ Pharmacie ☐ Épicerie ☐ Internet ■ Autre (spécifier) : Vaccination

8. Date du début du traitement (aaaa-mm-jj)*	9. Date de la fin du traitement (aaaa-mm-jj)
2021 [redacted]	N/A

Aux environs de l'apparition de l'effet secondaire, spécifier :

10. Posologie (concentration, quantité)	11. Fréquence (p. ex. 2 fois par jour)	12. Voie d'administration du produit (p. ex. voie orale)
Injection intra-muaculaire	1x	IM

13. Pourquoi le produit a-t-il été pris/prescrit?

Prévention COVID-19

14. Est-ce que l'utilisation du produit a cessé suite à l'apparition de l'effet secondaire?	15. Si l'utilisation du produit a cessé, l'effet secondaire s'est-il arrêté?
☐ Oui ☐ Non	☐ Oui ☐ Non ■ Ne s'applique pas

16. Est-ce que l'utilisation du produit a recommencé suite à l'arrêt de l'effet secondaire?	17. Si l'utilisation a été recommencée, l'effet secondaire s'est-il reproduit?
☐ Oui ☐ Non ■ Ne s'applique pas	☐ Oui ☐ Non ■ Ne s'applique pas

18. Probabilité que le produit ait causé l'effet secondaire

- ☐ Certain
- ☐ Probablement/vraisemblablement
- ■ Possiblement
- ☐ Pas disponible / incapable de vérifier
- ☐ Improbable
- ☐ Sans rapport

19. Autres produits de santé consommés aux environs de l'apparition de l'effet secondaire, excluant le traitement (temps d'utilisation, ligne de temps, etc.)

Inconnu. C.f. liste de médication ci-jointe.

20. Tests/données de laboratoire pertinents

Subject: Suivi vaccin covid astrazeneca NEI 000947601

Bonjour Mme Seguin,

Désolé du délai, votre fax semble avoir été transmis au mauvais endroit.

En réponse aux questions:

J'ai discuté avec la coroner [redacted] Le pathologiste aurait émis un rapport préliminaire qui montre un infactus transmural datant de [redacted] avant le décès (le vaccin a été reçu [redacted] avant le décès)

Il n'y a pas eu de prélèvement analysé au laboratoire de mon centre hospitalier autre qu'un test covid négatif. Les prélèvements ont été envoyé au laboratoire du coroner.

Je vous réfère au bureau du coroner pour les résultats d'autopsie et de prélèvement. Il ne semble pas avoir de lien finalement entre le vaccin et le décès de la patiente à ce que je peux comprendre.

Bien à vous

Dr [redacted]

Merci pour la déclaration d'un effet secondaire suivant l'immunisation (ESSI). Par conséquent de suivi d'évaluation par Santé Canada, le Programme de Canada Vigilance a identifié cette déclaration pour un suivi.

L'information que vous avez fournie dans votre déclaration a été enregistrée dans la base de données du Programme Canada Vigilance sous le numéro d'effet indésirable (NEI) 000947601.

Canada Vigilance N0	Clarification
000947601 (Date de réception [Santé Canada]): 26/04/2021	Veuillez SVP donnez toute information supplémentaire concernant: Informations cliniques concernant les antécédents médicaux actuels du patient, y compris tout facteur de risque cardiovasculaire potentiel (par exemple, diabète, antécédents de tabagisme, hypertension, hypercholestérolémie ou hyperlipidémie et antécédents de cardiopathies ischémiques). Si disponible, quel était le statut COVID-19 du patient au moment de l'effet indésirable. Informations sur le traitement médical et les investigations liées aux événements indésirables, par exemple, des analyses de sang (par exemple, numération globulaire complète et frottis sanguin, numération plaquettaire, D-dimère, taux d'anti-héparine) et examens radiologiques (par exemple, TDM, IRM, angiographie , échocardiogramme, etc.), si disponible. Résultat de l'enquête du coroner et de l'autopsie, si disponible.

Une réponse dans les meilleurs délais serait grandement apprécié pour l'évaluation de ce cas.

Si vous avez besoins de plus d'informations, n'hésitez pas à me contacter.

Merci de votre collaboration,

Michelle Séguin

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the Consumer via regulatory authority in Canada (CANADIAN HEALTH AUTHORITY), the report concerning a male patient of Unknown ethnic origin (age 95 years).

The patient's past and current medical history included cardiac failure congestive (dates not reported) and dyspnoea (dates not reported). No concomitant products were reported.

On an unknown date, the patient received Covishield Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadoxl ncov-19)) (batch number UNKNOWN), via intramuscular route, for covid-19 prophylaxis.

The patient started treatment with Eligard 22.5mg (leuprorelin acetate) (batch number(s) UNKNOWN) 1 DF every three months, subcutaneous, on an unknown date for prostate cancer and with Eligard 22.5mg (leuprorelin acetate) (batch number(s) UNKNOWN) 1 DF every three months, subcutaneous, on an unknown date for prostate cancer.

On an unknown date, the patient experienced cardiac failure congestive (preferred term: Cardiac failure congestive), dyspnoea (preferred term: Dyspnoea).

The patient died from the event of cardiac failure congestive and dyspnoea on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was cardiac failure congestive and dyspnoea.

The reporter assessed the events cardiac failure congestive and dyspnoea to be serious due to seriousness criteria of death.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

Summary of follow up information received by AstraZeneca on 16-AUG-2021 from regulatory authority (Canada) via consumer: Regulatory authority reference number was updated.

Summary of follow-up information received by AstraZeneca/MedImmune 04-May-2023 from consumer via spontaneous source: Duplicate case identified. Reporter case id associated. Event of DYSPNOEA outcome and seriousness criteria updated. Relevent history updated. Narrative amended.
CAUSE OF DEATH: CARDIAC FAILURE CONGESTIVE CAUSE OF DEATH: DYSPNOEA
COVISHIELD is a Verity Pharmaceuticals Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Fatal event of cardiac failure congestive is not listed in the company core data sheet of AZD1222. The event could be associated with the non-serious event dyspnoea. Age of patient could be a contributory risk factor for the event. Concomitant medication for prostate cancer could be a confounder for the event. The cause of death was reported as cardiac failure congestive and dyspnoea. Due to limited information regarding medical history of previous heart diseases, the onset date of the cardiac failure congestive and dyspnoea, date of vaccination, date of diagnosis of prostate cancer and start date of treatment, status of prostate cancer, date of death, circumstances leading to the event, cardiovascular risk factors (smoking, dyslipidemia, hypertension, diabetes), concurrent diseases, autopsy report details, diagnostic and etiological work-up (clinical and cardiovascular evaluation, blood chemistry profile, cardiac biomarkers, renal function, hepatic function, prostate-specific antigen test, electrocardiogram, chest x-ray, cardiac images), the evaluation did not find evidence to suggest a causal relationship between the event and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received via COVAES from contactable consumers (patient's parents) 29-year-old contactable male (patient) regarding Pfizer product Pfizer-BioNTech COVID-19 vaccine (BNT162b2) the following was reported.

A 29-years-old male patient received bnt162b2 (BNT162B2), dose 2 via an unspecified route of administration on [redacted]021 (Batch/Lot Number: Unknown) as DOSE 2 (INITIAL PFIZER DOSE), SINGLE for covid-19 immunization, at the age at vaccination of 29 years. Medical history included ECT (electroconvulsive therapy) from 10Mar2020 (Duration of Hospitalization: 4. Hospitalization prolonged: yes. Treatment Received: unknown), Meningitis acwy from May2018 (Hospitalization Prolonged: Yes. Treatment received: No), whole dsm5 (diagnostic and statistical manual of mental disorders). The patient's concomitant medications were not reported. Historical vaccine included first dose of Moderna (Batch/Lot number: not available) on [redacted]2021 (also reported as [redacted]2021, pending confirm). The patient experienced retina tear- retina detachment-heart attack-all dsm (diagnostic and statistical manual of mental disorders) 5-dyslexia-retardation-cancer-retina thinning, all on unknown date. Treatment received was unknown. The event heart attack with seriousness criteria of death, hospitalization, medically significant with fatal outcome, other events with seriousness criteria of medically significant with outcome of unknown. The adverse events result in: Doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. Patient also experienced interchange of vaccine products on an unspecified date with outcome of unknown. The patient died on [redacted]2021. It was not reported if an autopsy was performed. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, unknown if the patient been tested for COVID-19.

The lot number for BNT162b2 was not provided and will be requested during follow up.

Follow-up (25Sep2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.
BNT162B2 approved under Interim Order in Canada.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from Health Professional via regulatory authority in Canada (Canadian Health Authority), concerning a male patient of Unknown ethnic origin (age 85 years).

No medical history and No concomitant products were reported.

On an unknown date, patient received Covishield Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)), via intramuscular route, for covid-19 prophylaxis.

On an unknown date, patient started treatment with Eligard 30mg (leuprorelin acetate) 30 MG, 1 every 4 months , subcutaneous, for prostate cancer. On an unknown date patient started treatment with with Eligard 30mg (leuprorelin acetate) 30 MG, 1 every 4 months, subcutaneous, for prostate cancer.

On an unknown date, the patient experienced fall (preferred term: Fall), prostate cancer (preferred term: Prostate cancer), disease progression (preferred term: Disease progression), dizziness (preferred term: Dizziness) and malaise (preferred term: Malaise).

It was unknown if any action was taken with Covishield Vial Contains 10 Doses Of 0.5ml and both the doses of Eligard 30mg

On an unspecified date, patient died from the event of fall, prostate cancer, disease progression, dizziness and malaise

The cause of death was fall, prostate cancer, disease progression, dizziness and malaise.

The reporter assessed the events of fall, prostate cancer, disease progression, dizziness and malaise as serious due to seriousness criteria of death

Summary of follow-up information received by AstraZeneca/MedImmune on 16-AUG-2021 From Regulatory authority via consumer and Reporter ID of Regulatory Authority was added.

Summary of follow up information received by AstraZeneca/MedImmune on 23-Feb-2022 from Health Professional via Spontaneous source. New reporter Health Professional was added. New events Disease Progression, Prostate Cancer added.Narrative amendedCAUSE OF DEATH: FALL CAUSE OF DEATH: PROSTATE CANCER CAUSE OF DEATH: DISEASE PROGRESSION CAUSE OF DEATH: DIZZINESS CAUSE OF DEATH: MALAISE FALL - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes PROSTATE CANCER - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes DISEASE PROGRESSION - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes DIZZINESS - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes MALAISE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes
COVISHIELD is a Verity Pharmaceuticals Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal events of fall, prostate cancer, disease progression, dizziness and malaise are not listed in company core data sheet of AZD1222. The cause of death was reported as fall, prostate cancer, disease progression, dizziness and malaise. Prostate cancer and disease progression could be in association with each other and contributory to fall, dizziness and malaise. Vaccinee's history of prostate cancer could be considered as contributory factor to the events. Vaccinee's concomitant use of leuprorelin acetate could be considered as a confounding factor to the events. Due to limited information on risk factors, circumstances surrounding the events, date of the vaccination, onset date of the events, date of death, therapeutic measures taken with respect to the events, relevant family history, other concomitant medications, autopsy details if performed, detailed etiological and diagnostic work-up (complete blood analysis, general physical examination, radiology imaging studies), the evaluattion did not find evidence to suggest a causal relationship between the events and AZD1222.

Summary (B.5)

Case narrative (B.5.1)

A spontaneous report has been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via Consumer concerning a female patient (age not provided) of Unknown ethnic origin.

No medical history and no concomitant products were reported.

The patient received Covishield Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml (covid-19 vaccine nrvv ad (chadox1 ncov-19)) (batch number UNKNOWN) once/single administration, via intramuscular route, on an unknown date. On an unknown date, the patient experienced cerebrovascular accident (preferred term: Cerebrovascular accident).

The action taken for Covishield Covid-19 Vaccine Vial Contains 10 Doses Of 0.5ml in response to the event cerebrovascular accident was not applicable. The patient died from the event cerebrovascular accident on an unspecified date.

It was not known whether an autopsy was performed. The cause of death was cerebrovascular accident.

The event cerebrovascular accident was considered serious by the reporter due to seriousness criteria death.

For regulatory reporting purposes, if an event is spontaneously reported, at least a reasonable possibility of a causal relationship is implied by the reporter, even if the relationship is unknown or unstated.

The AstraZeneca COVID-19 Vaccine is an AstraZeneca Canada Inc. product authorized under the Interim Order.

Summary of follow-up information received by AstraZeneca on 16-AUG-2021: A spontaneous report had been received from the regulatory authority in Canada (CANADIAN HEALTH AUTHORITY) via Consumer and new information was added.
The regulatory authority Reference number was incorporated in the Reporter's Case ID field.
CAUSE OF DEATH: CEREBROVASCULAR ACCIDENT
COVISHIELD is a Verity Pharmaceuticals Inc. product authorized under the Interim Order.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Fatal event of cerebrovascular accident is not listed in the company core data sheet of AZD 1222. The reported cause of the death was cerebrovascular accident (PT: cerebrovascular accident).
Due to the limited information on patient's baseline health status, patient demographic information, medical history, family history, concurrent diseases, concomitant medications, risk factors, autopsy report, exact onset date of the event, diagnostic and etiological work-up (such as complete laboratory workup, imaging techniques, neurological evaluation and exams), further clarification of the event, clinical course and treatment details, the evaluation did not find evidence to suggest a causal relationship between the event and AZD 1222.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report from two contactable consumers (one consumer was reported as "patient") and a physician.
A 89 year-old female patient (not pregnant) received bnt162b2 (COMIRNATY), administered in arm left, administration date [redacted]2021 11:06 (Lot number: EL0203) at the age of 89 years as dose 1, single for covid-19 immunisation. Relevant medical history included: "Hypothyroid" (ongoing); "severe Alzheimer's dementia", start date: 2015 (ongoing), notes: Progressive worsening since 2015, most recent MMSE thought to be 13-15, baseline GCS approximately 14-15, urinary and fecal incontinence at baseline, on Donepezil; "mixed urinary incontinence" (unspecified if ongoing); "liable of COPD" (ongoing), notes: Patient was never a smoker so the diagnosis is very much in doubt.; "Osteoarthritis" (ongoing); "Dyslipidemia" (unspecified if ongoing); "mixed stress and urge incontinence" (unspecified if ongoing); "mixed stress and urge incontinence" (unspecified if ongoing); "Nephrolithiasis" (unspecified if ongoing); "Osteoporosis" (unspecified if ongoing); "Vitamin b12 deficiency" (not ongoing), notes: maintenance; "Appendectomy", start date: 1960 (unspecified if ongoing); "Cataract extraction", start date: 2011 (unspecified if ongoing), notes: right; "Cataract extraction", start date: 2012 (unspecified if ongoing), notes: left; "Cholecystectomy", start date: 1965 (unspecified if ongoing); "Total abdominal hysterectomy", start date: 1969 (unspecified if ongoing), notes: with unilateral salpingo-oophorectomy; "Total hip arthroplasty", start date: 2003 (unspecified if ongoing), notes: left, In the setting of a motor vehicle accident; "significant UTI" (unspecified if ongoing), notes: requiring hospitalization; "Breast biopsies" (unspecified if ongoing); "Hysterectomy" (unspecified if ongoing); "GERD" (unspecified if ongoing); "bone health" (unspecified if ongoing). Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medication(s) included: TECTA taken for gastrooesophageal reflux disease (ongoing); DONEZEPIL ACCORD taken for dementia (ongoing); VITAMIN D 3 taken for bone disorder (ongoing); ELTROXIN taken for hypothyroidism (ongoing); VITAMIN B12 NOS taken for vitamin b12 deficiency (ongoing); ESTRING; SYMBICORT TURBUHALER; VENTOLIN HFA. Past drug history included: Codeine, reaction(s): "Known allergies", notes: Gastrointestinal upset in response to Codeine; Clavulin, reaction(s): "Allergy"; Penicillin, reaction(s): "allergy", notes: Label on patient's chart. She has however reportedly had penicillin, amoxicillin and other beta-lactams in the past with no reaction, according to her daughter. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine, but received other medications the patient within 2 weeks of vaccination. Past drug history included known allergies with codeine. Patient experienced onset of vomiting on [redacted]2021, then low-grade fever, rapid heart rate, rapid breathing pattern, steady decline in health, eventually leading to hospitalization on [redacted]021, for duration of 13 days. Patient was diagnosed with urosepsis, bacteraemia and eventually infective endocarditis, cardiorenal syndrome given the worsening pulmonary edema, Acute hypernatremia, respiratory distress. pleural effusions, rapid progression of her dementia with onset [redacted]021 (death, hospitalization, medically significant, life threatening). The patient was hospitalized for urosepsis, bacteraemia, endocarditis (start date: [redacted]2021, discharge date: [redacted]2021, hospitalization duration: 12 day(s)). Treatment received included IV treatment and cardiac care. The adverse event result in Doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. No hospitalization prolonged applied. The patient underwent the following laboratory tests and procedures: alanine aminotransferase: [redacted]021) 108, notes: Elevated; [redacted]021) 145, notes: High; anion gap: [redacted]021) 12; aspartate aminotransferase: [redacted]2021) 71, notes: High; blood albumin: [redacted]2021) 30, notes: Low; blood alkaline phosphatase: [redacted]2021) 88; blood bicarbonate: [redacted]021) 85; blood bilirubin: [redacted]2021) 8; blood calcium: [redacted]2021) 2.23; blood chloride: [redacted]2021) 98; blood creatine phosphokinase: [redacted]021) 17; blood creatinine: [redacted]021) 76; [redacted]021) 138; blood culture: [redacted]021) positive for aerococcus urinae (aa), notes: also reported as gram-positive cocci and Aerococcus bacteremia; blood lactic acid: [redacted]021) 3.0, notes: elevated; [redacted]021) 1.9; blood magnesium: [redacted]2021) 0.82; blood phosphorus: [redacted]2021) 1.03; blood potassium: [redacted]2021) 3.3, notes: hypokalemia; [redacted]021) 4.1; blood pressure measurement: [redacted]2021) 120/68 mmHg; [redacted]2021) 155/50 mmHg; blood sodium: [redacted]2021) 133, notes: mild hyponatremia; [redacted]021) 139; [redacted]021) 147; [redacted]2021) 150, notes: from 146 (unspecified date); blood thyroid stimulating hormone: [redacted]2021) 1.94; body temperature: [redacted]2021) 37 Centigrade; brain natriuretic peptide: [redacted]2021) 1.498; carbon dioxide: [redacted]2021) 30; chest x-ray: [redacted]021) normal; [redacted]021) pleural effusions, notes: with slight worsening of right basilar atelectasis; [redacted]2021) deterioration, notes: with worsening interstitial pulmonary edema, mostly on the left lower and upper zone; computerised tomogram head: [redacted]2021) no acute intracranial abnormality, notes: Generalized atrophy noted; c-reactive protein: [redacted]2021) 173, notes: High; [redacted]021) elevated; echocardiogram: [redacted]021) severe pulmonary hypertension, notes: with RVSP at 75 with moderate mitral regurgitation and moderate aortic regurgitation; ejection fraction: [redacted]021) 55 %; electrocardiogram: [redacted]021) did not show any acute st segment changes, notes: she was in sinus rhythm; [redacted]021) sinus tachycardia with anterior t wave inversions, notes: Not new compared to the previous ECGs; glomerular filtration rate: [redacted]021) 60; [redacted]021) 29, notes: dropping from 46 (unspecified date); haematocrit: [redacted]021) 0.37; haemoglobin: [redacted]2021) 119; [redacted]021) 121; [redacted]021) 102; heart rate: (unspecified date) rapid; [redacted]2021) 98; [redacted]021) 100-110, notes: bpm; lymphocyte count: [redacted]021) 1.0; mean cell volume: [redacted]021) 94; neutrophil count: [redacted]021) 15.3; [redacted]021) 13.5, notes: High; oxygen saturation: [redacted]2021) 99 %; [redacted]021) 98 %, notes: on 1L O2; pco2: [redacted]2021) 50; ph body fluid: [redacted]021) 7.49; [redacted]021) 7.46; platelet count: [redacted]2021) 260; red cell distribution width: [redacted]021) 13.6; respiratory rate: (unspecified date) rapid; [redacted]021) 42, notes: did not look to be in any distress; [redacted]021) 20s; sars-cov-2 test: [redacted]021) negative; [redacted]021) negative; [redacted]021) negative; [redacted]021) negative; troponin: [redacted]021) 0.19; [redacted]021) 0.16, notes: High; urine analysis: [redacted]2021) positive for entococcus faecalis, notes: >= 1x10E7 CFU/L no pyuria. Unless there is a clinical diagnosis of UTI (e.g. dysuria, frequency, or non-localizing symptoms/signs e.g. fever, sepsis with NO other cause), this result most often represents asymptomatic bacteriuria (ASB), antibiotics are NOT indicated for ASB EX CEPT during pregnancy or prior to any urological procedure likely to cause mucosal bleeding. Changes in mental status or character of urine WITHOUT localizing urinary symptoms are NOT diagnostic of UTI; white blood cell count: [redacted]021) 17.6; [redacted]2021) 16.3, notes: High; [redacted]021) 9.1. Therapeutic measures were taken as a result of urosepsis, bacteraemia, endocarditis. The patient date of death was [redacted]2021. The reported cause of death was urosepsis, bacteraemia, endocarditis. No autopsy was performed. Patient died on [redacted]2021. Outcome of the events was fatal.

Additional information:
Medical profile [redacted]021) Patient in intensive care unit (CCU) from [redacted]2021 to [redacted]2021. Treated with Fosfomycin, Ceftriaxone and PIP Tazo. Consult note dated [redacted]2021: Patient presenting with altered level of

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

consciousness and dyspnea, found to have a marked leukocytosis, elevated CRP, tachycardia/tachypnea and blood cultures positive for Aerococcus, consistent with a diagnosis of urosepsis. Reason for referral: urosepsis. Social history: For the past years, patient has been living in the facility (name redacted), owing to her advanced dementia. According to her daughter, she is able to walk approximately half a block unassisted and will provide short verbal answers to questions. She is able to understand and obey commands. History of presenting illness: Transferred from ospital (name redacted)with a presumed diagnosis of urosepsis and possibly congestive heart failure. The patient is currently nonverbal so much of what follows is collateral history provided both by the transfer documents as well as the patient's daughter. Apparently, the patient was essentially well until receiving her COVID-19 vaccine on [redacted]2021. In the week following this vaccination, the patient developed symptoms of nausea and vomiting, resulting in a period of isolation at her facility. Following this isolation, she was found to not be at her functional baseline, both physically and cognitively. Her family suspected that she was developing a urinary tract infection as of approximately 10 days ago. With her previous urinary tract infections, the patient has had very similar symptoms. She was initially investigated as an outpatient with a urinalysis on [redacted] which revealed no pyuria but urine culture positive for Enterococcus faecalis. She was subsequently started on treatment with fosfomycin on [redacted]021. Due to worsening symptoms, she was subsequently transferred to hospital on [redacted]2021 where she was initially treated with ciprofloxacin. No repeat urine culture was sent, but blood cultures were positive for Aerococcus urinae. She was subsequently started on ceftriaxone for her Aerococcus bacteremia. In hospital, the patient was noted to be continuously tachypneic and dyspneic, despite requiring no oxygen. Given an elevated BNP and bilateral pleural effusions, she was felt to be in decompensated heart failure and was started on furosemide 40 mg IV daily from [redacted] until [redacted]2021. She received a 4-day course of empiric prednisone therapy for query acute exacerbation of COPD between [redacted]2021 and [redacted]2021. This was discontinued, as it was felt that the bulk of her symptoms were more consistent with heart failure. Given her clinical deterioration and rising white blood cell count, she was transferred to the Hospital (name redacted) on [redacted]021 2021. Here she was noted to have had an abrupt decrease in her level of consciousness to approximately 11 from a baseline of approximately 14-15 in facility name redacted. Physician spoke with patient's daughter who confirmed that her goals of care are M1. She works as a nurse and is very aware of how potentially serious this prognosis is. As an interesting aside, physician asked the patient's daughter about the patient's previous smoking history in light of her diagnosis of COPD. Her daughter replied that the patient never smoked. In terms of any lung problems, the patient's daughter reported that the patient used to routinely go down to vacation in Arizona and that she frequently returned with a harsh, barky cough that the patient referred to as "valley fever". Physician does not feel that this is relevant to her current presentation, but does wonder about a history of histoplasmosis or blastomycosis that may be worth investigating.

O[redacted]2021: Afebrile, looks unwell, moaning continuously. Neuro: GCS 11-12, obeys some but not all commands, PERL. HEENT: Non-contributory. CVS: Normal S1S2, no EHS/murmurs audible in ED, JVP below the clavicle by ultrasound. Resp: Clear, decreased air entry to the bases. Abdomen: Soft and non-tender. GU: Non-contributory. Extremities: Warm and dry, no peripheral edema. Skin: Warm and dry. Impression: Overall, her presentation seems to be most in keeping with urosepsis plus or minus decompensated heart failure on a background of overall poor function.
Issues and plan: 1) Urosepsis with Aerococcus bacteremia:
-Etiology: Given her past history of recurrent UTIs and the similarity of her current presentation to those episodes, urosepsis appears to be the most likely diagnosis at this period.
It is interesting that her urine culture grew Enterococcus faecalis whereas her blood grew Aerococcus urinae, however physician thinks it would be reasonable to treat both organisms at this point.
-Investigations: We have repeated her blood cultures, urinalysis, and urine cultures. We have repeated her Covid swab due to her ongoing dyspnea. We have ordered a repeat CRP.
-Management: We will change the patient's antibiotics from ceftriaxone to piperacillin-tazobactam 3.375 g IV every 6 hours. She will need a 14-day course following the onset of her bacteremia.
Given the patient's flat JVP and ongoing tachycardia, we will provide a 500 mL bolus of Ringer's lactate and will run a Ringer's lactate infusion at 50 mL/h for 10 hours. Her volume status will need to be reassessed in light of the concerns of ongoing heart failure.
2) Query decompensated heart failure:
-Etiology: Patient has no previous history of heart failure. Her BNP is certainly markedly elevated, but her pleural effusions may be of alternate etiologies. She has no peripheral edema. Repeated x-rays have not demonstrated pulmonary edema.
-Investigations: We will arrange for the patient to have a transthoracic echocardiogram while in hospital. Given the patient's tachypnea, tachycardia, and pleural effusions of unclear origin, we will order a CT PE to rule out pulmonary embolism as a cause of her ongoing presentation and to further evaluate these pleural effusions.
-Management: We will not diurese the patient any further at this time owing to the fact that she appears clinically dry, that she is developing a metabolic alkalosis, and that she is currently septic. We will start the patient on a low-sodium diet and will monitor her weights daily. We will gently fluid resuscitate the patient in light of the possibility of heart failure. We will follow-up on the results of the CT PE and manage accordingly.
3) Normocytic anemia:
-Etiology: Very mild anemia overall, most likely etiologies being anemia of chronic disease and iron deficiency anemia.
-Investigations: We have ordered a preliminary work-up including iron studies, ferritin, B12, folate, TSH, peripheral blood smear, and liver enzymes.
-Management: We will follow up on the aforementioned work-up and arrange management accordingly.
4) Altered level of consciousness:
-Etiology: The patient's level of consciousness reportedly fell from 15 to 11 over the course of the day. Though ongoing sepsis superimposed on pre-existing dementia is the most likely cause of her symptoms, all of the usual DIMS etiologies apply.
-Investigations: All of the basic DIMS work-up has been sent, including septic work-up, metabolic studies, and a CT of the patient's head. She is on no offending medications of note. CT head did not reveal any acute intracranial abnormality. The rest of her work-up is currently pending.
-Management: We will follow-up on these investigations and will manage accordingly.
5) Transaminitis:
-Etiology: Unclear etiology at present time, but has worsened since her initial admission to hospital on [redacted]2021.
-Investigations: We will obtain an ultrasound of the patient's abdomen to look for any evidence of hepatic abscess or other structural lesions that may be causing the patient's pattern of hepatocellular transaminitis. We have not sent off the full transaminitis work-up at this point as viral, metabolic, and autoimmune etiologies would seem to be far less likely. We will consider additional work-up should the patient's transaminitis persist without a clear etiology.
-Management: We will continue to monitor her liver enzymes daily for the next 3 days and will follow up on her abdominal ultrasound.
6) Troponitis:

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

ATIA - 19(1)

-Etiology: Likely demand ischemia in the context of ongoing sepsis plus or minus heart failure. No complaints of chest pain and no apparent ECG changes from previous.
-Investigations: Repeat troponin in 3 hours time.
-Management: Follow-up on this repeat troponin, with response depending on the amount of elevation.
7) Chronic conditions:
Management: Dementia: Continue on home donepezil. We will consult PT/OT/SLP to assess the patient's overall function and see if any optimization can be made. SLP in particular will be consulted to see if there is any risk of aspiration in light of the patient's severe dementia. Hypothyroidism: Continue on home levothyroxine. COPD: Continue on home puffers.
8)Standards of care: VTE prophylaxis: Tinzaparin. Nutrition: Heart healthy diet. Disposition: From redacted facility, with a baseline GCS of approximately 14-15. Goals of care: M1.

Discharge summary: Admit date: [redacted]021, discharge date: [redacted]021.
Discharge diagnosis: Urosepsis with urine culture growing Enterococcus faecalis susceptible to ampicillin, complicated by bacteremia with blood culture demonstrating Aerococcus urinae susceptible generally to penicillin.
Patient transferred to hospital to treat the following issues:
1. Urosepsis: This patient has a history of recurrent UTI and urine culture grew Enterococcus faecalis, currently on PIP Tazo.
2. Bacteremia growing aerococcus urinae that is susceptible to Penicillin, currently on PIP Tazo.
3. Nutrition: SLP assessment was done, and she is at high risk of aspiration. She was previously on modified diet, but for now we will keep her n.p.o. and gentle normal saline IV infusion at 50 mL/h while waiting SLP recommendation.
4. Asymmetrical pulmonary edema: This seems cardiogenic in nature with BNP at 1498. Of note, no evidence of previous ischemic heart disease or heart failure. Radio imaging with chest x-ray initially shows moderate size left- sided pleural effusion and small right pleural effusion, but on [redacted] it seems her imaging showing deterioration with worsening interstitial pulmonary edema, mostly on the left lower and upper zone. Echocardiogram was done on [redacted] showing severe pulmonary hypertension with a RVSP at 75 with moderate mitral regurgitation and moderate aortic regurgitation, however, ejection fraction was at 55%. This could be diastolic dysfunction although there is no mentioning of this in echocardiogram report. Currently, she is on Lasix 20 mg IV b.i.d. and her 02 supply remained steady at 1.5 to 2L nasal cannula. Her GCS is difficult to interpret, although she is alert with eye opening. Other vital signs are within acceptable range. Goals of care: At this point, her goals of care is M1. We had a conversation with the daughter about switching goals of care to comfort level given the overall picture as pulmonary edema is worsening, and it would be wise to switch her to C1. It seems the family fully understood the situation and the daughter will be phoning the brother to make the final decision.
Discharge summary: Infectious disease team was consulted as echocardiogram shows a possible vegetation while transesophageal echocardiogram is optimal to pinpoint whether there is vegetation or not. Given the age of the patient and the complex picture, this transesophageal echocardiogram may not be feasible upon Cardiology team impression. ID decided to stop ampicillin temporarily and switch to piperacillin and tazobactam because the aerococcus bacteremia could increase risk of Infective endocarditis. We had a lengthy conversation with ID team, and we felt that we will continue the piperacillin and tazobactam for 5 days before switching back to ampicillin on [redacted] for 6 weeks and treating the bacteremia and urosepsis. New issues: New AKI with creatinine of 138 and GFR 29, dropping from 46. It seems to me this is more of cardiorenal syndrome given the worsenin

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

The events of Urosepsis, bacteraemia ,Cardiorenal syndrome, Respiratory distress, Hypernatremia, pleural effusion and Endocarditis are assessed as possibly related to the suspect drugBNT162B2 based on temporal association, but consider also possible contributory effects from patient's medical history and/or concomitant medications
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

ATIA - 19(1)

Alanine aminotransferase([redacted]2021):High
Aspartate aminotransferase([redacted]2021):High
Blood albumin([redacted]-2021):Low
Troponin([redacted]2021):High
Chest X-ray([redacted]2021):with slight worsening of right basilar atelectasis.
Neutrophil count([redacted]-2021):High
C-reactive protein([redacted]2021):High
Alanine aminotransferase([redacted]2021):Elevated
Blood lactic acid([redacted]2021):elevated
Blood potassium([redacted]-2021):hypokalemia
Blood sodium([redacted]2021):mild hyponatremia
Electrocardiogram([redacted]2021):she was in sinus rhythm
Computerised tomogram head([redacted]2021):Generalized atrophy noted.
Electrocardiogram([redacted]2021):Not new compared to the previous ECGs.
Blood sodium([redacted]2021):from 146 (unspecified date)
Chest X-ray([redacted]-2021):with worsening interstitial pulmonary edema, mostly on the left lower and upper zone.
Glomerular filtration rate([redacted]-2021):dropping from 46 (unspecified date)
Echocardiogram([redacted]-2021):with RVSP at 75 with moderate mitral regurgitation and moderate aortic rregurgitation.
Blood culture([redacted]2021):also reported as gram-positive cocci and Aerococcus bacteremia
White blood cell count([redacted]2021):High
Respiratory rate([redacted]2021):did not look to be in any distress
Urine analysis([redacted]2021):>= 1x10E7 CFU/L
no pyuria.
Unless there is a clinical diagnosis of UTI (e.g. dysuria, frequency, or non-localizing symptoms/signs e.g. fever, sepsis with NO other cause), this result most often represents asymptomatic bacteriuria (ASB), antibiotics are NOT indicated for ASB EX CEPT during pregnancy or prior to any urological procedure likely to cause mucosal bleeding. Changes in mental status or character of urine WITHOUT localizing urinary symptoms are NOT diagnostic of UTI.
Heart rate([redacted]2021):bpm
Oxygen saturation([redacted]2021):on 1L O2

Patient Medical History (B.1.7)

MedDRA version (B.1.7.1a.1)	Episode name (B.1.7.1a.2)	
26.0	Hypothyroidism	
Start date (B.1.7.1c)	**Continuing (B.1.7.1d)**	**End date (B.1.7.1f)**
	Yes	
Comments (B.1.7.1g)

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received from a contactable physician through COVAES. The physician reported information for both mother and fetus. This is the fetus report.

A fetus patient of unspecified gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), transplacental on [redacted]2021 11:30 (Batch/Lot Number: EX2294) as dose 1, single and transplacental o[redacted]2021 10:00 (Batch/Lot Number: FA9099) as dose 2, single, for COVID-19 immunization at the clinic. The patient's medical history was not reported. Concomitant medications included rabeprazole and ascorbic acid, betacarotene, calcium sulfate, colecalciferol, cyanocobalamin, ferrous fumarate, folic acid, nicotinamide, pyridoxine hydrochloride, retinol acetate, riboflavin, thiamine mononitrate, tocopheryl acetate, zinc oxide (PRENATAL VITAMINS). The patient's mother medical history included gestational diabetes (previous pregnancy 2014), penicillin allergy, IgA nephropathy, inflammatory arthritis NOS; and previously took macrolides and had drug allergy. The patient was exposed on BNT162B2 on [redacted]2021 (at 12 weeks Gestation Period). On [redacted]2021 00:30, the patient's mother had a preterm labor resulting in emergency caesarean. Preterm birth at 24 weeks and death of newborn. The patient had died on [redacted]2021. It was unknown if an autopsy was performed.

Information on the batch/lot number has been requested.

Amendment: This follow-up is being submitted to amend previously reported information: Classification (removed At Risk classification) and Reaction details(events updated to Maternal exposure during pregnancy and Premature baby).
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Based on the information available and considering temporal association a possible contributory role of the suspect BNT162B2 cannot be completely excluded for the reported events of neonatal death owing to patient's mother having a preterm labor resulting in emergency caesarean and preterm birth at 24 weeks, and death of the newborn. The case will be reassessed further upon receipt of additional information.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

Local reference number: [redacted]

A solicited report was received from a consumer via a patient support program concerning a 70-years-old male patient treated with Lonsurf (trifluridine and tipiracil hydrochloride) tablets, (unknown dose and frequency) given orally from [redacted]2020 (unknown cycle) for metastatic colorectal cancer (mCRC). Lonsurf is approved to be administered after the morning and the evening meal, on Day 1 through Day 5, followed by a recovery period from Day 6 through Day 7. Lonsurf will again be administered on Day 8 through Day 12, followed by a recovery period from Day 13 through Day 28.

Medical history was reported as unknown.

Previously, the patient experienced energy level was 1/10 (AER No: [redacted].

Concomitant medication was reported as unknown.

Co-suspect drug included Covid vaccine (COVID-19 vaccine).

On [redacted]2021, the patient was hospitalized due to pneumonia, during which time he had received an antibiotic (unspecified) and morphine. On an unspecified date the patient received a second dose of COVID-19 vaccine, and the reporter (spouse) expressed concern if it had an impact on the patients pneumonia. The course of hospitalization was not reported. It was noted that it went very fast, not otherwise specified. At the time of reporting, the patient had passed away on an unspecified date [redacted]2021), described as one week prior. No further information was provided.

Treatment rendered included morphine and unspecified antibiotics for pneumonia.

Lab tests were reported as unknown.

Action taken with Lonsurf due to the event, pneumonia, was reported as drug discontinued on an unknown date. Action taken with Covid vaccine due to the event, pneumonia, was not applicable. The date when the last dose of Lonsurf was administered prior to the onset of the event was not reported.

The outcome of the event, pneumonia, was fatal on an unknown date in [redacted]2021. It was unknown if an autopsy was performed.

Reporter causality assessment:
The reporters assessment for the causal relationship between the event, pneumonia, and Lonsurf was not reported and for the seriousness (criteria) was serious (Death and hospitalization).
The reporters assessment for the causal relationship between the event, pneumonia, and Covid vaccine was not reported and for the seriousness (criteria) was serious (Death and hospitalization).

No additional information is expected for this report.

Initial report received on [redacted]2021.

The following information has been updated or newly reported.

This information was received from the Canadian Vigilance Database. Other manufacturer Control Number was reported.

The previously reported co-suspect medication COVID-19 vaccine was updated as Vaxzevria (COVID-19 vaccine nrvv ad (chadox1 ncov-19)).

On an unspecified date the patient passed away due to pneumonia (previously reported).

Action taken with Vaxzevria due to the event, pneumonia, was not applicable.

Reporter causality assessment:
The reporter's assessment for the causal relationship between the event, pneumonia, and Lonsurf was not reported and for the seriousness (criteria) was serious (Death and hospitalization).
The reporter's assessment for the causal relationship between the event, pneumonia, and Vaxzevria was not reported and for the seriousness (criteria) was serious (Death and hospitalization).

Follow-up 1 report was received on 11/Apr/2022.

Reporter's comments (B.5.2)

The reporter's assessment for the causal relationship between the event, pneumonia, and Lonsurf was not reported and for the seriousness (criteria) was serious (Death and hospitalization).
The reporter's assessment for the causal relationship between the event, pneumonia, and Vaxzevria was not reported and for the seriousness (criteria) was serious (Death and hospitalization).

Pneumonia (Pneumonia):Serious (Death, Hospitalization), Related
A 70-years-old male patient with metastatic colorectal cancer (mCRC) was under treatment with Lonsurf from [redacted] 2020 (unknown cycle) when experienced pneumonia. Pneumonia is a serious event as this lead to hospitalization and death. Pneumonia is a well-known side effect for the safety profile for Lonsurf but the pneumonia with fatal outcome is considered as unlabeled. Pneumonia is assessed as related to Lonsurf.

Canada Vigilance Adverse Reaction Report	**HC Latest Received Date:**	20220704 CCYYMMDD
	HC Initial Received Date:	2021 CCYY

Safety Report (A.1)

Safety report I.D. (Ver.) (A.1.0.1)

CA-SA-2018SA310104(7)

Primary source country (A.1.1) Canada	**Occur country (A.1.2)**	**Serious? (A.1.5.1)**	Serious
		Seriousness (A.1.5.2)	
Type of report Study		**Caused/prolonged hospitalization?**	Yes
		Results in death?	Yes
MAH/Sponsor Initial Received Date (A.1.6) 20181105 CCYYMMDD	**MAH/Sponsor Latest Received Date (A.1.7)** 20220628 CCYYMMDD	**Disabling/Incapacitating?**	No
		Life threatening?	No
Additional documents? (A.1.8.1) No		**Congenital anomaly/birth defect?**	No
		Other medically important condition?	Yes

List of documents held by sender (A.1.8.2)

Fulfill expedited criteria? (A.1.9) Yes	**Regulatory authority's number (A.1.10.1)**	
	Company number (A.1.10.2) CA-SA-SAC20210802000887	

Other case identifiers in previous transmission? (A.1.11)

Yes

Duplicate Source(s) (A.1.11.1)	**Duplicate Case identifiers (A.1.11.2)**
SA	CA-SA-SAC20220304000777
PORTAL ID	SanofiPVPortal220220303000407
SA	CA-SA-SAC00000000335152
PORTAL ID	SanofiPVPortal220220318000398
SA	CA-SA-SAC00000000335152
SA	CA-SA-SAC00000000335152
SAAVPROD	CA-SA-2018SA310104

Duplicate (D) / Link (L) Report number(s) (A.1.12)

()

Report nullification? (A.1.13)	**Reason for nullification (A.1.13.1)**
No	

Medically confirmed or from health professional? (A.1.14)

Yes

Source (A.1.4)

Patient (B.1)

Patient Initial (B.1.1)	Sex (B.1.5)	Patient height (B.1.4)	Patient weight (B.1.3)
PRIVACY	Female		
Date of birth (B.1.2.1)	**Age group (B.1.2.3)**		**Onset Age (B.1.2.2)**
	Adult		49 Years
Gestation Period (B.1.2.2.1)		**LMP date (B.1.6)**	

GP medical record no. (B.1.1.1a)	Specialist record no. (B.1.1.1b)	Hospital record no. (B.1.1.1c)	Investigation no. (B.1.1.1d)
			[redacted]

Patient death (B.1.9)

Date of death (B.1.9.1)	Was autopsy done? (B.1.9.3)
2022[redacted] CCYYMMDD	Unknown

Patient death cause (B.1.9.2)

MedDRA version for cause (B.1.9.2.a)	Reported cause(s) (B.1.9.2.b)
26.0	Hemophagocytic lymphohistiocytosis

Patient autopsy (B.1.9.4)

MedDRA version for autopsy-determined cause(s) of death (B.1.9.4a)	Autopsy-determined cause(s) of death (B.1.9.4b)

Drug (B.4)

Drug characterization (B.4.k.1)	Medicinal product name (B.4.k.2.1)	
Suspect	ALEMTUZUMAB	
Active Substance names (B.4.k.2.2)		
alemtuzumab		
Country drug obtained (B.4.k.2.3)	**Batch/lot no. (B.4.k.3)**	
Canada	7HV2644	
Holder and authorization/application no. of drug (B.4.k.4)		
Structured dosage info (B.4.k.5)		
12 Milligram,1 every 1 (Days) Cumulative dose to first reaction: 36 Milligram		
Dosage text (B.4.k.6)		
12 mg, QD		
Pharmaceutical form (B.4.k.7)	**Route of administration (B.4.k.8)**	**Parent route of admin (B.4.k.9)**
	Intravenous drip	
Gestation period (B.4.k.10)	**MedDRA version (B.4.k.11a)**	**Indication (B.4.k.11b)**
	26.0	Relapsing-remitting multiple sclerosis
Start date of drug (B.4.k.12)	**Drug end date (B.4.k.14)**	
20181114 CCYYMMDD	20181115 CCYYMMDD	
Start period (B.4.k.13.1)	**Last period (B.4.k.13.2)**	**Duration of drug Admin (B. 4.k.15)**
959 Days	949 Days	3 Days
Action(s) taken with drug (B.4.k.16)	**Did reaction recur on readministration? (B.4.k.17.1)**	
Drug discontinued		
Additional info (B.4.k.19)		

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Drug Recurrence (B.4.k.17)		
MedDRA version (B.4.k.17.2a)	**Which reaction(s)/event(s) recurred? (B.4.k.17.2b)**	
Drug Reaction relatedness (B.4.k.18)		
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Abdominal pain	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
Health Care professional	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Abdominal pain	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
Health Care professional	Global Introspection	Related
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Abdominal pain	
Source of assessment (B.4.k.18.2)	**Method of assessment (B.4.k.18.3)**	**Result (B.4.k.18.4)**
Pharmaceutical Company	Global Introspection	Not Reportable
MedDRA version (B.4.k.18.1a)	**Reaction assessed (B.4.k.18.1b)**	
26.0	Abdominal pain

Summary (B.5)

Case narrative (B.5.1)

Initial information received on 05-Nov-2018 regarding a solicited valid non-serious case received from a consumer/ non-hcp (healthcare professional), in the scope of post-marketing sponsored study "SPON_I_ALEMTUZUMAB".

Patient ID: [redacted] Country: Canada

Study Title: PATIENT SUPPORT PROGRAM INVOLVING ALEMTUZUMAB.

This case involves a 49 years old female patient who had sickness/ hemophagocytic lymphohistiocytosis/ patient was deceased/ hlh/ haemophagocytic lymphohistiocytosis, joint pain, chest infection/walking pneumonia/ atypical pneumonia, not feeling well recurrent/ malaise, intermittent elevated bp/ blood pressure increased, shocks going down her legs all night, (tingling feeling), the same in her left arm/ paraesthesia, intermittent elevated pulse 121 bpm asymptomatic/heart rate was elevate to 114/ heart rate increased, flu/ influenza, intermittent headache/ headache, diarrhea/ diarrhoea, nausea, migranes/ migraine, sweating/ hyperhidrosis, no appetite/ decreased appetite, lost all of her hair, issues with her kidneys, burning pain at iv site/iv noted to be painful/ infusion site pain, cough, severe pain in her left foot/ painful left foot/ pain in extremity, vertigo, could not walk/ gait disturbance, large painful cold sore/ oral herpes, pain in belly/ abdominal pain upper, nausea, cold (recurrent)/ a few bad colds/sick 2 more times with bad colds/ nasopharyngitis and severe sinus infection/ sinusitis while receiving vaccine Covid-19 vaccine and while treated with alemtuzumab (Lemtrada) and covid-19 vaccine NRVV AD (chadox1 ncov-19) [Vaxzevria].

The patient's past medical history included Influenza.
The patient's past medical treatment(s), vaccination(s) and family history were not provided.
At the time of the event, the patient had ongoing Migraine, Depression, Anxiety, Urinary tract disorder (Micturition disorder), multiple sclerosis and hypertension.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Concomitant medications included ranitidine; dimenhydrinate (Gravol); diphenhydramine hydrochloride (Benadryl [diphenhydramine hydrochloride]); Methylprednisolone; Acetaminophen; acyclovir [aciclovir] (Acyclovir [aciclovir]); Acrivastine, Acyclovir sodium; Methylprednisolone sodium succinate; Ranitidine hydrochloride for premedication; Gabapentin; Venlafaxine; Mirtazapine; Nortriptyline; Zolmitriptan; Frovatriptan; Naproxen; vitamin D [Vitamin d nos]; vitamin B12 NOS (Vitamin B 12 [vitamin B12 nos]); Vitamin E NOS; Frovatriptan succinate; Nortriptyline hydrochloride; and Venlafaxine hydrochloride.

On 05-Nov-2018, the patient started taking alemtuzumab, concentration for solution for infusion, at dose of 12 mg daily dose intravenous drip (lot - 7HV2644) for Relapsing-remitting multiple sclerosis. On the same day patient had intermittent elevated pulse 121 bpm asymptomatic (blood pressure increased; heart rate increased).
On 06-Nov-2018, patient had intermittent headache (headache) and burning pain at IV site (infusion site pain; latency: 1 day) and on the same day IV was removed and new one was inserted at right hand.
On 07-Nov-2018, patient completed his treatment with alemtuzumab. On same day, patient experienced shocks going down her legs all night, (tingling feeling), the same in her left arm (paraesthesia; latency: 2 days) and her heart rate was elevated to 114 lasting about 20 seconds. All this happened when lying down and resolved when she got up. On 07-Nov-2018, patient recovered from Intermittent Elevated pulse 121 bpm asymptomatic, shocks going down her legs all night, (tingling feeling), the same in her left arm. Patient reported getting shocks in her legs periodically but not usually both legs at one time.
On 08-Nov-2018, 3 days after receiving Lemtrada in the morning patient had elevated BP 161/116, 142/112, 148/110 also patient stated not feeling well with diarrhea (6 times) since 2 am, so loperamide hydrochloride (Imodium) (diarrhoea) was taken also patient had nausea (nausea) since 4 am and dimenhydrinate (Gravol) was taken. Patient also had headache throughout the night, so paracetamol (Tylenol) was taken. Patient contacted referring physician, and he requested to hold the infusion and send patient to ER for further assessment.
On 14-Nov-2018 the infusion was re-started, and it was done for 2 days. The same day, the patient recovered from the events or intermittent headache, not feeling well (malaise), intermittent elevated BP 161/116, diarrhea and nausea.
On 15-Nov-2018 the infusion was noted to be painful and so intravenous drip was removed and replaced.
On 17-Dec-2018, after 1 month 12 days of treatment with alemtuzumab, patient experienced large painful cold sore (oral herpes) in the morning. No other information was provided.
On 18-Dec-2018, patient experienced, pain in belly (abdominal pain upper), nausea, sweating (hyperhydrosis), no appetite (decreased appetite). It was reported that the patient suspected it might be the flu (influenza).
On 21-Dec-2018, the patient recovered from pain in belly, large painful cold sore, nausea, sweating and no appetite which lasted for about 3 days. She took Tylenol, anti-nausea pills and went back on her antivirals.
On an unknown date in Mar-2019 since the last three weeks Patient was really sick with the worst cold of her life (nasopharyngitis) and her chest feels like stabbing knives (chest pain) when coughed (cough) and had a sinus infection (sinusitis) and chest infection and was still sick. Patient would be seeing doctor again today. Patient had been sick for 3 weeks now. Patient saw doctor and was diagnosed with a severe sinus infection and walking pneumonia (atypical pneumonia; medically significant). Patient was put on Clavulanic. As follow up, patient reported her infections had resolved on an unknown date in 2019.
Patient had a sore throat (oropharyngeal pain) on 29-Apr-2019 and now had a full-fledged cold. If her symptoms worsen, she will go to the doctors. The patient reported the antibiotics worked very well and did clear it all up. She had been sick two more times with bad colds since Apr-2019, but she was recovering. On an unknown date 2 weeks ago, the patient had migraines (migraine).
On 07-Sep-2019 (10 months 2 days) the patient could not walk due to severe pain in her left foot (pain in extremity) and vertigo. The foot was better now, but she still had vertigo. No further information provided.
Patient reported she had suffered chronic migraines since the age of 12, but they had been terrible this last month. She was taking frovatriptan and zolmitriptan (Zomig) as treatment.
On an unknown date, the patient received a dose of suspect COVID-19 vaccine not produced by Sanofi Pasteur lot number not reported via unknown route and VAXZEVRIA (COVID-19 VACCINE NRVV AD (CHADOX1 NCOV-19)) at an unknown dose intramuscular (with an unknown batch number) for COVID-19 immunisation
On 21-Jun-2021 after a latency of 2 years 7 months 16 days the patient was in intensive care unit for sickness (illness) and did not known when she would be discharged. She was pretty sick right now and the doctors were unsure if it was because of alemtuzumab or COVID-19 vaccine.
She returned home on 29-Jun-2021 after being in hospital for 40 days. She was diagnosed with hemophagocytic lymphohistiocytosis (haemophagocytic lymphohistiocytosis; medically significant) and is being treated with chemotherapy. She is off all her multiple sclerosis medication until levels normal out and she has finished her chemotherapy
Follow up to previously reported hospitalization in the intensive care unit with onset date: 21 June 2021 Patient reported she was not well and is getting her blood work done twice a week plus chemotherapy. She is being followed by Rheumatology. They feel her Lemtrada caused the hemophagocytic lymphohistiocytosis (HLH). No further information given. Corrective treatment: chemotherapy, blood work twice a week.
As follow up patient for hospitalization on 21 June 2021 reported she was admitted back into the intensive care unit on September 17, 2021 and was still there. and as Corrective treatment: chemotherapy, blood work twice a week. The patient reported she was back in the intensive care unit for a week, but was back home now. On an unknown date after unknown latency patient reported having issues with kidney (renal disorder) and lost all her hair (alopecia). Program received blood work completion report from neurologist office which stated patient was deceased (death, fatal, medically significant).
Upon follow-up, it was reported that, on an unknown date and latency, the patient began experiencing fever (Pyrexia), joint pain (Arthralgia), abdominal pain, lymph nodes (Lymphadenopathy) and headache and died on [redacted] 2022 due to HLH. The patient had serum ferritin at a value of >500 Âµg/L and other diagnostic tests used to confirm the diagnosis of HLH were: Alkaline Phosphatase, Bilirubin, Prothrombin time/ international normalized ratio (PT/INR), hemoglobin, leukocytes, creatinine, urea, lipid panel with fasting triglycerides, Cranial CT (Computer tomography)
Immunosuppressive therapy with cyclosporine/ etoposide/ Prednisone Outcome for HLH: Death [redacted] 2022.

Action taken: drug withdrawn for intermittent elevated bp, not feeling well, intermittent headache, diarrhea, nausea, no action taken for burning pain at iv site, elevated pulse, shocks going down her legs, not applicable for rest of the events

Corrective treatment: Immunosuppressive therapy with cyclosporine/ etoposide/ Prednisone for hemophagocytic lymphohistiocytosis , Clavulanic for chest infection/walking pneumonia, severe sinus infection, Tylenol for intermittent headache; gravol for nausea; immodium for diarrhea, Tylenol, anti-nausea pills, anti-viral pills for pain in belly, Large painful cold sore, nausea, sweating and no appetite, antibiotic for cold (recurrent)/ a few bad colds/sick 2 more times with bad colds, not reported issues with her kidneys and has lost all of her hair; none for rest of the events.

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Outcome: Fatal for Haemophagocytic lymphohistiocytosis, Not Recovered / Not Resolved for the event not feeling well recurrent, Unknown for the event flu, alopecia, renal disorder; was Recovering / Resolving for the event cold (recurrent)/ a few bad colds/sick 2 more times with bad colds, Not Recovered / Not Resolved for the event migranes, was Not Recovered / Not Resolved for the event could not walk, Not Recovered / Not Resolved for the event vertig0; Recovered / Resolved for rest of the events.

Reporter causality: related for Haemophagocytic lymphohistiocytosis and malaise; not reported for rest all the events.

Company causality: not reportable for death, sickness/ hemophagocytic lymphohistiocytosis, alopecia, renal disorder, Sweating, No Appetite, burning pain at IV site/IV noted to be painful, Cough, chest feels like stabbing knives when she coughs, Chest infection/walking pneumonia, large painful cold sore, pain in belly, Nausea, cold (recurrent)/ a few bad colds/sick 2 more times with bad colds, severe Sinus infection, migraine, could not walk, severe pain in her left foot and vertigo, and reportable for rest all the events.

Additional information received on 14-Nov-2018 from patient. regimen was updated. Stop date of concomitant drugs added. Event term of elevated BP updated to intermittent elevated BP. Event term of burning pain at IV site updated to burning pain at IV site. Clinical course updated and text amended accordingly.

Additional information was received on 17-Dec-2018 from a patient. Additional event of large painful cold sore was added. Clinical course updated and text amended accordingly.

Additional information was received on 18-Dec-2018 from patient. Additional events of pain in belly, nausea, sweating, no appetite and flu were added in detail. Clinical course was updated and text was amended accordingly.

Additional information was received on 14-Jan-2019 from patient. Outcome updated for pain in belly, large painful cold sore, nausea, sweating and no appetite and corrective treatment was added for same. Clinical course was updated and text was amended accordingly.

Additional information was received on 26-Mar-2019 from non-healthcare professional. new events of cold and cough was added with details. clinical course was updated and text amended accordingly.

Additional information was received on 05-Apr-2019 from patient. event chest infection/walking pneumonia, severe sinus infection were added with details. Start date for event cold and cough were added with details. Upon internal review formulation of suspect dug was updated to unknown. Clinical course was updated, and text amended accordingly.

Additional information was received on 02-May-2019 from patient. outcome of the events cough, Severe Sinus infection, Chest infection/walking pneumonia were updated to recovered. Verbatim was updated for event of cold. A new event of sore throat was added with details. Clinical course was updated and text amended accordingly.

Additional information received on 10-Jun-2019 from patient. Outcome of sore throat was updated from unknown to recovered; cold (recurrent) was updated from unknown to recovering. Verbatim of cold (recurrent) was updated to cold (recurrent)/ a few bad colds/sick 2 more times with bad colds. Clinical course was updated. Text amended accordingly. Upon internal review sore throat was updated as symptom of cold (recurrent)/ a few bad colds/sick 2 more times with bad colds.

Additional information received on 12-Sep-2019 from patient. Additional event of migraine could not walk, severe pain in her left foot and vertigo added. Clinical course was updated, and text amended accordingly.

Additional information received on 21-Oct-2019 from patient: Corrective treatment drugs added for the event of migraines, medical history added. Action taken updated. Clinical course updated and text was amended accordingly.

Additional information was received on 06-Jul-2021 from the patient. This case initially considered as non-serious was upgraded to serious for as the event of sickness with seriousness criteria: hospitalization was added. Concomitant medication was added. Event of sickness was added. Cosuspect was added. Clinical course updated and text was amended accordingly.

Additional information was received on 30-Jul-2021 from the patient. Event verbatim of sickness/ hemophagocytic lymphohistiocytosis was updated. This case initially considered as non-serious was upgraded to serious for as the event of sickness/ hemophagocytic lymphohistiocytosis was added. Clinical course updated and text was amended accordingly.

Additional information was received on 18-Aug-2021 from the patient via call center. outcome for event sickness/ hemophagocytic lymphohistiocytosis was updated. Verbatim and outcome for event not feeling well was updated. Causality updated. Clinical course was updated and text was amended accordingly.

Additional information was received on 20-Sep-2021 from patient. Clinical course was updated and text was amended accordingly.

Additional information was received on [redacted] 2021 from patient. Outcome of event of Haemophagocytic lymphohistiocytosis was updated. Text amended.

Additional information received on [redacted] 2021 from the patient. Event of alopecia, renal disorder were added. Clinical course updated and text amended accordingly.

Additional information received on [redacted] 2022 from physician. New event of death was added. Text amended accordingly.

Additional information was received on [redacted] 2022 from the physician. Event verbatim was updated for Haemophagocytic lymphohistiocytosis and additional symptoms of fever, joint pain, abdominal pain, lymph nodes, headache were added. Date of death was added. Text amended accordingly.

Additional information was received on 28-Jun-2022 from physician. The case 2022SA129724(to be deleted) was identified to be duplicate of 2018SA310104(to be retained). Hence, all the information from the case 2022SA129724 has been merged in the case 2018SA310104. Upon internal review, event verbatim and concomitants was updated. Text amended accordingly.

Summary (B.5)

Case narrative (B.5.1)

Based on the current case data, this case has been classified as invalid. This spontaneous case was reported by a consumer and describes the occurrence of DEATH (Died after getting the vaccine) in a patient of an unknown age and gender who received mRNA-1273 (Moderna CoviD-19 Vaccine) for COVID-19 vaccination.

No Medical History information was reported.

On an unknown date, the patient received dose of mRNA-1273 (Moderna CoviD-19 Vaccine) (unknown route) 1 dosage form. Death occurred on an unknown date The cause of death was not reported. It is unknown if an autopsy was performed.

No concomitant medications were reported.

Treatment information was not provided.

The reporter stated that there were limited information on adverse event.

Company comment:

Extremely limited provided in the case. Critical details such as therapy date, onset, patient's medical history, clinical details pertaining to fatal outcome are all lacking. Hence, causal association cannot be ascertained. No further information is expected.

Reporter did not allow further contact

Most recent FOLLOW-UP information incorporated above includes:
On 20-Aug-2021: Upon internal review on 30-AUG-2021 action taken was corrected from unknown to Not applicable

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Extremely limited provided in the case. Critical details such as therapy date, onset, patient's medical history, clinical details pertaining to fatal outcome are all lacking. Hence, causal association cannot be ascertained. No further information is expected.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report received via COVAES from a non-contactable physician. An 18-year-old female patient (not pregnant at time of vaccination) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 via an unspecified route of administration, administered in Arm Left on [redacted]2021 (Batch/Lot Number: EY0578, expiration date: 31Oct2021) (at the age of 18-years-old) as dose 1, single for covid-19 immunisation. The most recent COVID-19 vaccine was administered at Public Health Clinic/Veterans Administration facility. Medical history was None. There were no known allergies. There was no relevant past drug history. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were no concomitant medications received within 2 weeks of vaccination. The healthy patient was noticed diseased in her bed by parents on [redacted]2021. Autopsy was taken but cannot make any conclusion for the reason of death. She had Pfizer vaccine on [redacted]2021, not sure if vaccine related to the death or not. There was no treatment received. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient died on [redacted]2021. Autopsy was done. Autopsy-determined cause of patient death was No. There were no autopsy remarks. Subsequently, information from product quality complaint team regarding physician's complaint about BNT162B2 (COMPOUND BNT162 COVID-19 VACCINE SUSPENSION FOR INTRAMUSCULAR 2ML MULTIPLE DOSE VIAL X 1, lot: EY0578, expiration date: 31Oct2021) included: Brief complaint description: PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE - EY0578 - Adverse Event Safety Request For Investigation; Reasonably Suggest Device Malfunction? blank; Severity of Harm: N/A; Complaint Class: External Cause Investigation; Complaint Sub-Class: Adverse Event Safety Request For Investigation. Root Cause: Process Related: No; Final Confirmation Status: Not Confirmed; Vendor Related: No; Lot-Specific Trend Identified: No; Lot Trend Assmt. & Rationale: The complaint history for the reported PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE lot EY0578 was reviewed. As of 10Sep2021, this is the only complaint that has been received for this lot and classification. No lot specific trend was identified that would require additional investigation; Lot Trend Actions Taken: There were no lot trend actions taken as a result of this investigation; Other Trend Identified?: No; Other Trend Assmt. & Rationale: N/A; Site Sample Status: Not Received; Summary of Investigation from Kalamazoo (EP) division was: The initial scope of the investigation was limited to the reported finished goods lot EY0578, fill lot EY0539, and the bulk formulated drug product lot EP8644. Based on the results of the investigation, the scope was not expanded. Manufacturing and packaging batch records were examined. Pfizer Kalamazoo QO did not receive photographs or a return complaint sample for examination. The complaint was not confirmed. No related quality issues were identified during the investigation. There were no planned or unplanned deviations recorded during the manufacture of the lot that may have caused a complaint of this nature. A review of the manufacturing and packaging records confirmed all processing steps met established requirements, all noted defects were within limits and discarded, elapsed time tracking was within limits, and the freezer storage was acceptable. There were no product quality defects observed during the examination of retained reference samples. There is no impact to the quality of the lot. It is unknown how the product was handled, stored, or administered after it left the Kalamazoo site; Investigational report conclusion from Kalamazoo (EP) division was: The complaint for an adverse event requested by Safety with the use of the PFIZER-BIONTECH COVID-19 VACCINE INJECTABLE lot EY0578 was investigated. The investigation included reviewing manufacturing and packaging batch records, retained reference samples, deviation investigations and an analysis of the complaint history for the reported lot. The final scope was determined to be the reported finished goods lot EY0578, fill lot EY0539 and the bulk formulated drug product lot EP8644. A complaint sample was not returned. No related quality issues were identified during the investigation. There is no impact on product quality. The complaint was not confirmed.

No follow-up attempts are possible. No further information is expected.

Follow-up (16Sep2021): New information received from product quality complaint team included: expiration date, investigational results.

No follow-up attempts are needed. No further information expected.
BNT162B2 approved under Interim Order in Canada.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Based on the information in the case report and a plausible temporal relationship, a possible causal relationship between the event death and suspect drug BNT162B2 cannot be excluded.
The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Summary (B.5)

Case narrative (B.5.1)

This is a spontaneous report via COVAES from a contactable other health care professional (patient's niece), physician and consumer. A 91-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiry date were not reported), via an unspecified route of administration, administered in the right arm on [redacted]2021 13:00 (at the age of 91 years old) as dose 2, single for COVID-19 immunization; apixaban (ELIQUIS), oral from an unspecified date (batch/lot number was not reported) to an unspecified date, at 5 mg, 2x/day for cerebrovascular accident prophylaxis; and atenolol, oral from an unspecified date (batch/lot number was not reported) to an unspecified date, at 50 mg, daily for atrial fibrillation. Medical history included left middle cerebral artery (MCA) stroke on 26Apr2017 (also reported in May2017); ongoing atrial fibrillation (on Eliquis 5mg oral 2x/day and atenolol 50mg oral daily); (recurrent) transient ischemic attack (TIA) in 2011; coronary artery disease (CAD) in 2013 (crestor 5mg oral daily). The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. The patient previously took the first dose of COVID-19 Vaccine (MANUFACTURER UNKNOWN) for COVID-19 immunization. The patient experienced stroke, brain bleed, hemorrhagic cerebrovascular accident on [redacted]2021, fever, chills and vomiting on [redacted]2021 03:00. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On [redacted]2021 at 03:00, the patient became extremely sick, she had fever, chills and vomiting. Later that evening (as reported; pending clarification), she passed away from a stroke and brain bleed. The adverse events resulted in emergency room, department or urgent care. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On [redacted]021, reported relevant tests was unknown, patient was admitted and treated in the hospital. Date of death was on [redacted]2021. Patient was admitted to hospital on [redacted]2021 and died of hemorrhagic cerebrovascular accident (CVA). The action taken in response to the events for apixaban and atenolol was not applicable. The outcome of the events fever, chills and vomiting was unknown while the outcome of all other events was fatal. The patient died on [redacted]2021. It was not reported if an autopsy was performed.

Follow-up (20May2021): New information was received from a contactable physician in response to a HCP follow up questionnaire includes reporter, medical history, co-suspect products, death date, events seriousness criteria and hospital start date.

No follow up attempts are possible; Information about lot/batch number cannot be obtained.

Follow-up (20May2021): New information received from LP-BRISTOL-MYERS SQUIBB COMPANY includes suspect drug details (updated ELIQUIS as company drug) and additional reference number CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-050842.

Follow-up (05Jul2021): This follow-up is being submitted to notify that the lot/batch number for one dose is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Follow-up (05Jul2021): This is a follow-up spontaneous report, from a contactable physician via CanadaHealth Authority, Health Canada (regulatory authority number: CA-HEALTHCANVIG-000946849), based on the information received by Pfizer from Bristol-Myers Squibb (manufacturer control number: CA-BRISTOL-MYERS SQUIBB COMPANY-

ATIA - 19(1)

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

BMS-2021-050842), license party for apixaban (ELIQUIS).

This case was initially received via Pfizer Inc (Reference number: 2021498435) on 20-May-2021. The most recent information was received on 05-Jul-2021 and was forwarded to BMS on 05-Jul-2021. This spontaneous case was reported by a physician and describes the occurrence of fatal haemorrhagic stroke (Stroke; Cerebral bleeding/ Hemorrhagic CVA), fatal craniocerebral injury, fatal fall, fatal subarachnoid haemorrhage and fatal subdural haemorrhage in 91-year-old female patient who received apixaban (ELIQUIS) for cerebrovascular accident prophylaxis. Co-suspect products included BNT162B2 for COVID-19 immunization. The patient's past medical history included CVA on 26-Apr-2017, TIA (Recurrent TIA in 2011) in 2011 and coronary artery disease in 2013. Concurrent medical conditions included AFib. On an unknown date, the patient started ELIQUIS (oral), 5 milligram twice a day and BNT162B2 (unknown route). On an unknown date, the patient experienced haemorrhagic stroke (seriousness criteria death, hospitalization and medically significant), craniocerebral injury (seriousness criteria death and medically significant), fall (seriousness criterion death), subarachnoid haemorrhage (seriousness criteria death and medically significant) and subdural haemorrhage (seriousness criteria death and medically significant). The patient was hospitalized on [redacted]-2021 due to haemorrhagic stroke. The action taken with ELIQUIS (oral) was not applicable. The patient died on [redacted]2021. The reported cause of death was hemorrhagic CVA, craniocerebral injury, fall, subarachnoid haemorrhage and subdural haemorrhage. It is unknown if an autopsy was performed. Apixaban was used for Afib. Patient was admitted and treated in the hospital. Patient was admitted to hospital on [redacted]2021 and died of hemorrhagic CVA. For ELIQUIS (oral), the reporter did not provide any causality assessments. Case received from Canada health authority: CA-HEALTHCANVIG-000946849. Correction to this file was done on 28-May-2021, based on the information previously received on 20-MAY-2021 following change was made: BNT162B2 was coded as co-suspect product in the product tab (previously coded as Covid-19 Vaccine). Most recent follow-up information received from consumer via Canada HA on 05-Jul-2021 incorporated above includes: Added new events. Further company followup with the physician is not possible.

Follow-up (01Sep2021): This follow-up is being submitted to notify that the lot/batch number is not available despite the follow-up attempts made. Follow-up attempts have been completed and no further information is expected.

Follow-up (07Sep2021): This is a follow-up spontaneous report, from a contactable physician via Canada Health Authority, Health Canada (regulatory authority number: CA-HEALTHCANVIG-000946849), based on the information received by Pfizer from Bristol-Myers Squibb (manufacturer control number: CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-050842), license party for apixaban (ELIQUIS).

This case was initially received via Pfizer Inc (Reference number: 2021498435) on 20-May-2021. The most recent information was received on 07-Sep-2021 and was forwarded to BMS on 07-Sep-2021. This spontaneous case was reported by a physician and describes the occurrence of fatal HAEMORRHAGIC STROKE (Stroke; Cerebral bleeding/ Hemorrhagic CVA), fatal CRANIOCEREBRAL INJURY, fatal FALL, fatal SUBARACHNOID HAEMORRHAGE, fatal SUBDURAL HAEMORRHAGE, fatal CHILLS, fatal PYREXIA and fatal VOMITING in 91-year-old female patient who received apixaban (Eliquis) film-coated tablet for Cerebrovascular accident prophylaxis. CO-SUSPECT PRODUCTS included Bnt162b2 for COVID-19 immunization and Atenolol for Atrial fibrillation. The patient's past medical history included CVA on 26-Apr-2017, TIA (Recurrent TIA in 2011) in 2011 and Coronary artery disease in 2013. Concurrent medical conditions included AFib. On an unknown date, the patient started Eliquis (Oral), 5 milligram twice a day, Bnt162b2 (unknown route) contains 6 doses of 0.3 ml after dilution and Atenolol (Oral), 50 milligram once a day. On an unknown date, the patient experienced HAEMORRHAGIC STROKE (seriousness criteria death, hospitalization and medically significant), CRANIOCEREBRAL INJURY (seriousness criteria death and medically significant), FALL (seriousness criterion death), SUBARACHNOID HAEMORRHAGE (seriousness criteria death and medically significant), SUBDURAL HAEMORRHAGE (seriousness criteria death and medically significant), CHILLS (seriousness criteria death and hospitalization), PYREXIA (seriousness criteria death and hospitalization) and VOMITING (seriousness criteria death and hospitalization). The patient was hospitalized on [redacted]021 due to Haemorrhagic stroke. The action taken with Eliquis(Oral) was unknown. The patient died on [redacted]2021. The reported cause of death was hemorrhagic cva, Craniocerebral injury, Fall, Subarachnoid haemorrhage, Subdural haemorrhage, Chills, Pyrexia and Vomiting. It is unknown if an autopsy was performed. Apixaban was used for Afib. Patient was admitted and treated in the hospital. Patient was admitted to hospital on [redacted]2021 and died of hemorrhagic CVA. Action taken with suspect therapies in response to events were not reported. For Eliquis(Oral), the reporter did not provide any causality assessments. Case received from Canada health authority: CA-HEALTHCANVIG-000946849.

Followup (25Nov2021): This is a spontaneous follow-up report received from a contactable reporter healthcare professional from Regulatory Authority, via License Party (Bristol-Myers Squibb).Regulatory number: CA-HEALTHCANVIG-000946849 (Health canada), CA-HEALTHCANVIG-E2B_04149686 (Health canada). Other Case identifiers: CA-BRISTOL-MYERS SQUIBB COMPANY-BMS-2021-050842 (Bristol-Myers Squibb Company).

This case was initially received via Pfizer Inc (Reference number: 2021498435) on 20-May-2021. The most recent information was received on 25-Nov-2021 and was forwarded to BMS on 25-Nov-2021. This spontaneous case was reported by a physician and describes the occurrence of fatal HAEMORRHAGIC STROKE (Stroke; Cerebral bleeding/ Hemorrhagic CVA), fatal CRANIOCEREBRAL INJURY, fatal FALL, fatal SUBARACHNOID HAEMORRHAGE, fatal SUBDURAL HAEMORRHAGE, fatal CHILLS, fatal PYREXIA and fatal VOMITING in 91-year-old female patient who received apixaban (Eliquis) film-coated tablet for Cerebrovascular accident prophylaxis. CO-SUSPECT PRODUCTS included Bnt162b2 for COVID-19 immunization and Atenolol tablet for Atrial fibrillation. The patient's past medical history included CVA on 26-Apr-2017, TIA (Recurrent TIA in 2011) in 2011 and Coronary artery disease in 2013. Concurrent medical conditions included AFib. On an unknown date, the patient started Eliquis (Oral), 5 milligram twice a day, Bnt162b2 (unknown route) at single dose and Atenolol (Oral), 50 milligram once a day. On an unknown date, the patient experienced HAEMORRHAGIC STROKE (seriousness criteria death, hospitalization and medically significant), CRANIOCEREBRAL INJURY (seriousness criteria death and medically significant), FALL (seriousness criteria death and medically significant), SUBARACHNOID HAEMORRHAGE (seriousness criteria death and medically significant), SUBDURAL HAEMORRHAGE (seriousness criteria death and medically significant), CHILLS (seriousness criteria death, hospitalization and medically significant), PYREXIA (seriousness criteria death, hospitalization and medically significant) and VOMITING (seriousness criteria death, hospitalization and medically significant). The patient was hospitalized on [redacted]2021 due to Haemorrhagic stroke. The action taken with Eliquis(Oral) was unknown. The patient died on [redacted]2021. The reported cause of death was hemorrhagic cva, Craniocerebral injury, Fall, Subarachnoid haemorrhage, Subdural haemorrhage, Chills, Pyrexia and Vomiting. It is unknown if an autopsy was performed. Apixaban was used for Afib. The patient received co-suspect drug BNT162B2 vial contains 6 doses of 0.3 ml after dilution in intramuscular suspension at a frequency of total with therapy duration of 1 day. The patient received atenolol in tablet dosage form. Patient was admitted and treated in the hospital. Patient was admitted to hospital on [redacted]2021 and died of hemorrhagic CVA. Action taken with suspect therapies in response to events were not reported. For Eliquis(Oral), the reporter did not provide any causality assessments. Case received from

Document Released Under the Access to Information Act by Health Canada / Document divulgué en vertu de la Loi sur l'accès à l'information par Santé Canada

Canada health authority: CA-HEALTHCANVIG-000946849 correction to this file was done on 28-May-2021, based on the information previously received on 20-MAY-2021 following change was made: BNT162B2 was coded as co-suspect product in the product tab (previously coded as Covid-19 Vaccine). Most recent follow-up information received from consumer via Canada HA on 05-Jul-2021 incorporated above includes: Added new events. Most recent follow-up information received from the other health professional via Canada Health Authority (CA-HEALTHCANVIG-E2B_04149686) incorporated above includes: 07-SEP-2021 Suspect product, product attributes and New events added. Atenolol was considered as additional suspect. Events Chills, Pyrexia and Vomiting were added additionally. Most recent follow-up information received from other health professional via Canada HA on 25-Nov-2021 incorporated above includes: suspect product details, event attributes and narrative updated. Further company follow-up with the Physician is not possible.

Apixaban(ELIQUIS) is under agreement with Bristol-Myers Squibb.

Follow-up (22Nov2021): This is a follow-up report received from a contactable healthcare professional from Regulatory Authority via License Party (AstraZeneca). Regulatory number: E2B_04149686 (Health Canada). Other Case identifier(s): CA-Atnahs Limited-ATNAHS20211124694 (Atnahs Limited), ATNAHS20211124694 (Atnahs Limited), CA-AstraZeneca-2021A848073 (AstraZeneca).

This spontaneous case (MFR no: E2B_04149686) was reported by a healthcare professional in Canada to Health Canada and was received by Atnahs on 22/Nov/2021. This case refers to a 91-year-old female patient who experienced cerebral haemorrhage, cerebrovascular accident, chills, craniocerebral injury, fall, haemorrhagic stroke, pyrexia, subarachnoid haemorrhage, subdural haemorrhage and vomiting during therapy with atenolol at a dose of 50mg administered twice daily, administered orally in tablet form for the treatment of atrial fibrillation. This case was considered serious due to the reactions being of medical significance, the patient requiring hospitalisation and resulting in death. Co-suspect medications were reported as Eliquis film coated tablets administered at a dose of 5mg twice daily for the treatment of cerebrovascular accident prophylaxis and Pfizer-biontech COVID-19 vaccine vial contains 6 doses of 0.3ml after dilution for the treatment of COVID-19 immunisation administered once in total. There were no reported concomitant medications. The patients medical history was not reported. On an unknown date the patient began oral therapy with atenolol tablets administered at a dose of 50mg twice daily for the treatment of atrial fibrillation. On an unknown date the patient experienced cerebral haemorrhage, cerebrovascular accident, chills, craniocerebral injury, fall, haemorrhagic stroke, pyrexia, subarachnoid haemorrhage, subdural haemorrhage, and vomiting. Action taken with atenolol was reported as unknown. At the time of the report, the outcome of all reactions was reported as fatal. No further information was available. Report received by AstraZeneca/MedImmune from Atnahs on 29-Nov-2021.CAUSE OF DEATH: CEREBRAL HAEMORRHAGE CAUSE OF DEATH: CEREBROVASCULAR ACCIDENT CAUSE OF DEATH: CHILLS CAUSE OF DEATH: CRANIOCEREBRAL INJURY CAUSE OF DEATH: FALL CAUSE OF DEATH: HAEMORRHAGIC STROKE CAUSE OF DEATH: PYREXIA CAUSE OF DEATH: SUBARACHNOID HAEMORRHAGE CAUSE OF DEATH: SUBDURAL HAEMORRHAGE CAUSE OF DEATH: VOMITING CEREBRAL HAEMORRHAGE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes CEREBROVASCULAR ACCIDENT - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes CHILLS - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes CRANIOCEREBRAL INJURY - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes FALL - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes HAEMORRHAGIC STROKE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes PYREXIA - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes SUBARACHNOID HAEMORRHAGE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes SUBDURAL HAEMORRHAGE - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes VOMITING - MEDICAL CONFIRMATION BY HEALTH PROFESSIONAL: Yes.

AstraZeneca Comment: This case concerns a 91 year old female patient with reported 10 Serious Fatal events in association with Atenolol. Vomiting is listed in the company core data sheet of suspect drug. However, as the serious adverse event is reported with the seriousness criteria of Death the events is considered unlisted. Events of Cerebral haemorrhage, Cerebrovascular accident, Craniocerebral injury, Haemorrhagic stroke, Subarachnoid haemorrhage and Subdural haemorrhage could be associated with each other and further be confounding factor for the event of Vomiting. Event of Fall could be contributory risk factor for the event of Subarachnoid haemorrhage and Subdural haemorrhage. Due to limited information on relevant medical history, concurrent diseases, concomitant medications, exact start date of suspect drug, exact start date and circumstances leading to the event, complete etiologic and diagnostic workup (Complete Blood count, Imaging studies, Neurological examination) evaluation did not find evidence to suggest a causal relationship between Events and suspect Drug.

The reporter considered the events Cerebral haemorrhage, Cerebrovascular accident, Chills, Craniocerebral injury, Fall, Haemorrhagic stroke, Pyrexia, Subarachnoid haemorrhage, Subdural haemorrhage, Vomiting related to ATENOLOL.

Atenolol is under agreement with AstraZeneca.

Reporter's comments (B.5.2)

MedDRA version for sender's diagnosis (B.5.3a)

Sender's diagnosis (B.5.3b)

Sender's comments (B.5.4)

Pfizer comment: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 and Atenolol to the development of reported events cannot be fully excluded. Medical history of previous stroke may provided a plausible alternative explanation for the events of Stroke and Cerebral bleeding. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
BMS medical evaluation comment: This 91 years old patient died due to fall, craniocerebral injury leading to subarachnoid hhaemorrhage, subdural haemorrhage and hemorrhagic stroke after receiving apixaban therapy for atrial fibrillation. Based on the elderly age and nature of the reported events fall leading to craniocerebral injury is considered not related to suspect therapy. Although fall contributed, considering the anticoagulant nature of suspect therapy, its causal role in the reported bleeding events are considered possible.
